CS INSTRUMENTS

Catalogue 25 | 26

Proven and innovative measuring technology for compressed air and gases

- Chart recorder
- Dew Point
- Flow
- Compressed air quality
- Leakage
- Software
- Pressure
- Ambient air
- Humidity

VERSION 07/2025-26

MADE IN GERMANY

OVERVIEW CHART RECORDER

DS 500

- Chart recorder for data logging of up to 4/8/12 sensors

Page 12-15

DS 400

- Chart recorder for data logging of up to 2/4 sensors

Page 16-19

DS 500 mobile

- Chart recorder for data logging of up to 4/8/12 sensors

Page 24-27

DS 500 PM mobile

- For efficiency measurement of compressors

Page 28-31

DS 400 mobile

- Chart recorder for data logging of up to 2/4 sensors

Page 32-35

PI 500

- Portable handheld device

Page 36-37

Sensors for DS 500 / DS 400

Page 38-41

DP 500/510

- **Mobile dew point device**

Page 46-47

DP 400 mobile

- **Mobile dew point device in a sturdy service case**

Page 48-49

FA 510/515

- Dew point sensor for residual moisture measurement in compressed air and gases

Page 50-51

DS 52

- **Plug-in dew point set**

Page 52

ATEX

FA 515 EX

- **Dew point sensor for residual moisture measurement in compressed air and gases in potentially explosive atmospheres**

Page 53

FA 550

- **Dew point sensor with a sturdy die-cast aluminium housing**

Page 54-55

FA 500

- **Dew point sensor with integrated display**

Page 56-57

DS 400

- **Plug-in dew point set**

Page 58-59

Accessories for dew point measurement / calibration

Page 60-66

OVERVIEW FLOW [THERMAL]

VA 570

- Inline flow meter with flange
- DN 15 to DN 80

Page 82-86

VA 570

- Inline flow meter with thread
- 1/2" to 2"

Page 82-86

VA 550

- Sturdy flow meter as an insertion version

Page 88-91

VA 500

- Flow meter as an insertion version

Page 92-94

VA 520

- Inline flow meter with flange
- DN 15 to DN 80

Page 96-100

VA 520

- Inline flow meter with thread
- 1/4" to 2"

Page 96-100

VA 521

- Compact Inline flow meter

Page 102-103

VA 525

- Compact Inline flow meter for air and nitrogen

Page 104-105

OVERVIEW FLOW [DIFFERENTIAL PRESSURE]

CMM 500
Compressor Master Meter

- Reference measuring device for compressors and blowers
- High-precision measurement for billing purposes

Page 72-80

VD 500

- Flow sensor for wet compressed air

Page 106-107

VD 520

- Inline differential pressure flow sensor

Page 108-111

VD 550

- Robust flow sensor for wet compressed air and gases

Page 112-113

VD 570

- Robust Inline differential pressure flow sensor for wet compressed air and gases

Page 114-117

OVERVIEW FLOW [VORTEX]

VU 570

- Vortex ultrasonic flow sensor

Page 118-120

VX 570

- Vortex flow sensor

Page 122-123

Accessories for Consumption Measurement / Calibration / Measuring ranges for different gases

Page 126-143

OVERVIEW COMPRESSED AIR QUALITY

OIL CHECK 500 - stationary solution

- Monitoring system for residual oil content measurement in compressed air

Page 148-154

OIL CHECK 500 / PC 400 / FA 510

- Measure compressed air quality according to ISO 8573

Page 157

OIL CHECK 500 / PC 400 / FA 510

- Mobile transport trolley
- Measure compressed air quality according to ISO 8573

Page 158

OIL CHECK 500 / PC 400 / FA 510

- Service case “all in one solution”

Page 159-161

OIL CHECK 500 - mobile solution

- Monitoring system for residual oil content measurement in compressed air

Page 159-161

PC 400 / DS 400 - stationary solution

- Monitoring system for particle measurement in compressed air

Page 162-163

PC 400 / DS 500 mobile solution

- Monitoring system for particle measurement in compressed air

Page 163

OVERVIEW LEAKAGE

LeakCam 600

- Camera enables simultaneous visualization of multiple leaks

Page 164-175

UltraCam LD 500 / 510

- Leak detector with camera
- 30 MEMS microphones create the image of the leaks

Page 176-184

LD 500 / 510

- Leak detector with camera

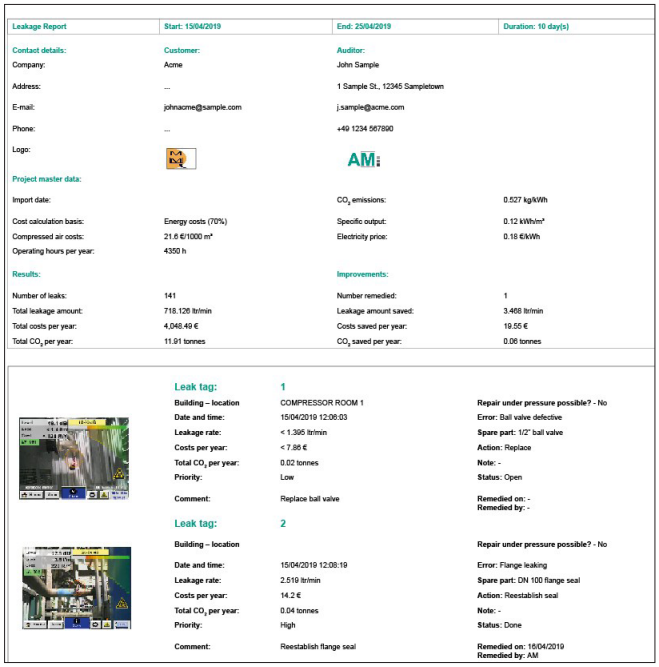

Page 178-184

LD 450

- Low-price leak detector

Page 186-187

Leakage Report | Start: 15/04/2019 | End: 25/04/2019 | Duration: 10 day(s)

Project master data:

Import date:		CO_2 emissions:	0.527 kg/kWh
Cost calculation basis:	Energy costs (70%)	Specific output:	0.12 kWh/m³
Compressed air costs:	21.6 €/1000 m³	Electricity price:	0.18 €/kWh
Operating hours per year:	4350 h		

Results: | Improvements:

Number of leaks:	141	Number remedied:	1
Total leakage amount:	718.126 ltr/min	Leakage amount saved:	3.466 ltr/min
Total costs per year:	4,048.49 €	Costs saved per year:	19.55 €
Total CO_2 per year:	11.91 tonnes	CO_2 saved per year:	0.06 tonnes

Leak tag: 1

Building – location	COMPRESSOR ROOM 1	Repair under pressure possible? - No	
Date and time:	15/04/2019 12:06:03	Error: Ball valve defective	
Leakage rate:	< 1.395 ltr/min	Spare part: 1/2" ball valve	
Costs per year:	< 7.86 €	Action: Replace	
Total CO_2 per year:	0.02 tonnes	Note: -	
Priority:	Low	Status: Open	
Comment:	Replace ball valve	Remedied on: - Remedied by: -	

Leak tag: 2

Building – location		Repair under pressure possible? - No	
Date and time:	15/04/2019 12:08:19	Error: Flange leaking	
Leakage rate:	2.519 ltr/min	Spare part: DN 100 flange seal	
Costs per year:	14.2 €	Action: Reestablish seal	
Total CO_2 per year:	0.04 tonnes	Note: -	
Priority:	High	Status: Done	
Comment:	Reestablish flange seal	Remedied on: 16/04/2019 Remedied by: AM	

CS Leak Reporter

- Creates detailed ISO 50001 reports

CS Leak Reporter - Cloud solution

- Browser-based access to the CS Cloud

Page 181

OVERVIEW SOFTWARE

CS Basic

- Data evaluation as a graph or in table form

Page 188-189

CS Network

- Energy monitoring software with Client/Server solution

Page 190-192

OVERVIEW PRESSURE

Differential pressure probe

- For testing on Compressed air systems

Page 194-195

PTS 500

- 2 in 1 sensor: measures pressure and temperature in the process

Page 196

DPS 16

- Digital temperature compensation and non-linearity correction

CS 16

- Welded measuring system with no seals

Page 197

OVERVIEW AMBIENT AIR

IAC 500

- 3 in 1 sensor: Absolute pressure, temperature and humidity in the room

Page 198

OVERVIEW HUMIDITY

FO 510

- Industrial oil moisture sensor

Page 200

FL 510

- Industrial humidity transmitter

Page 201

1

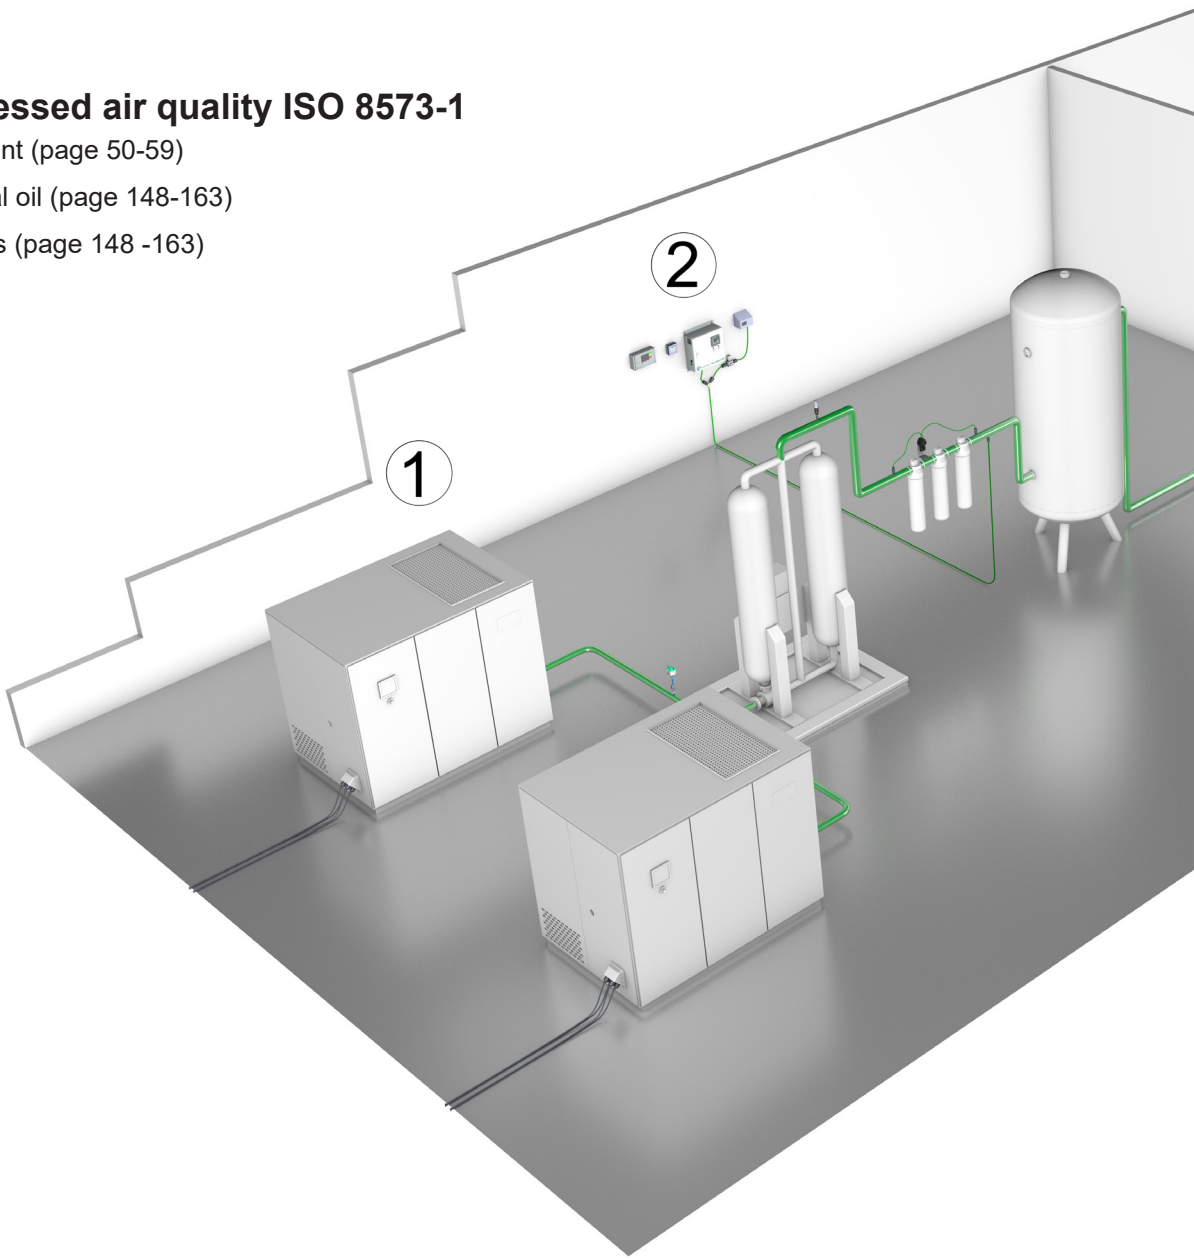

Efficiency measurement + compressed air audits

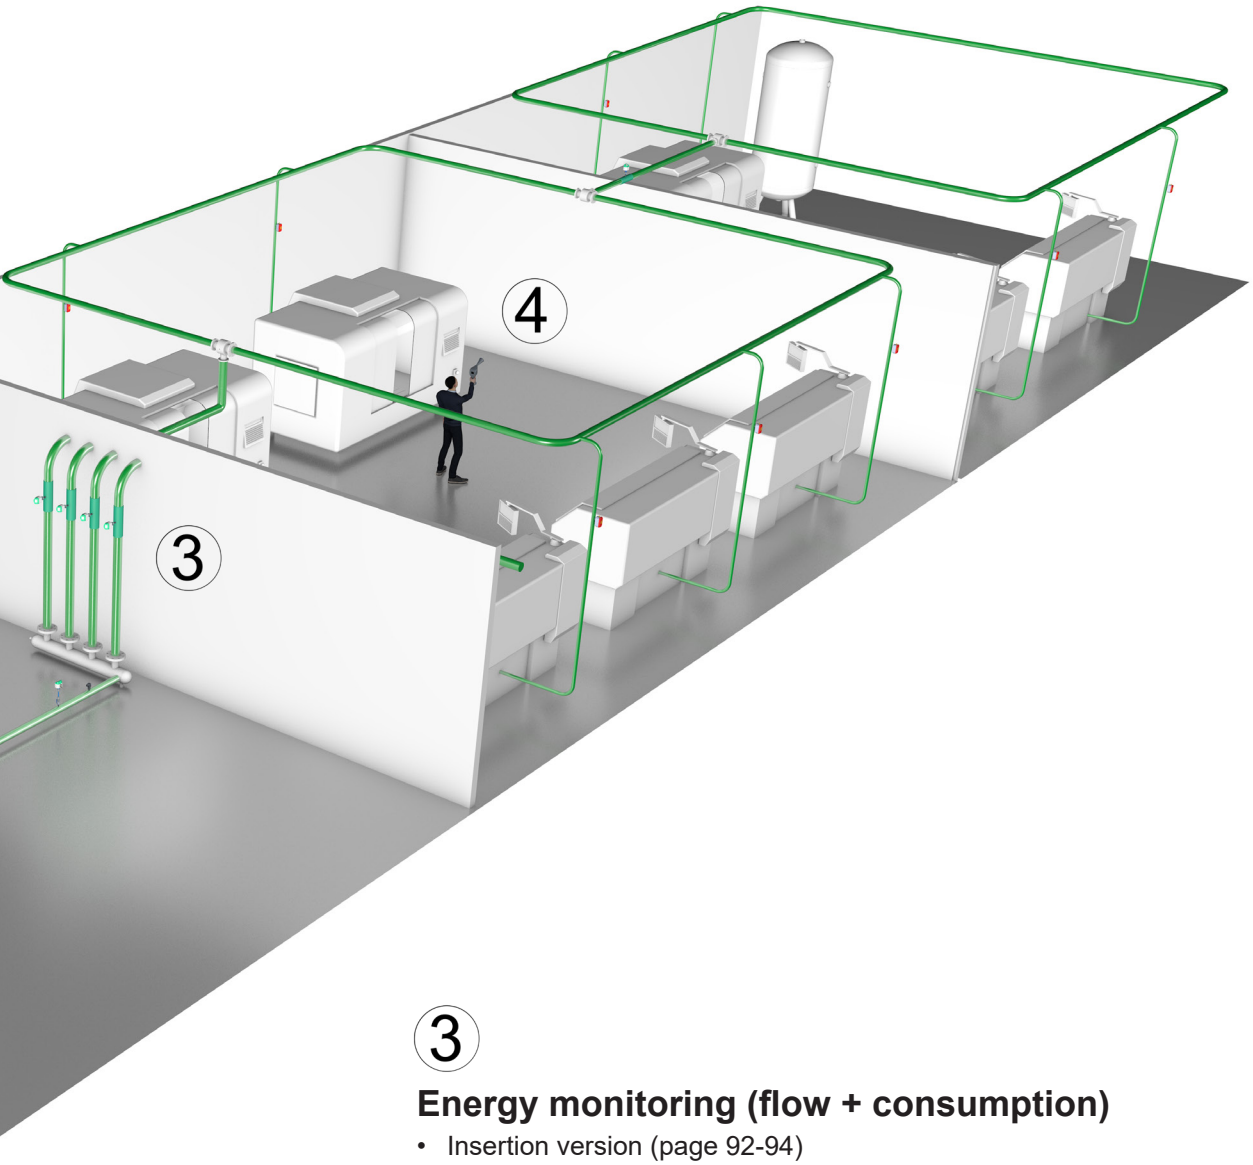

- Electrical power measurement (page 23)
- Compressor capacity (page 106)
- Data logger / chart recorder (page 12-45)
- CS Basic Software (page 158-159)
- Compressor intake conditions (page 170)
- System pressure (page 166)

2

Compressed air quality ISO 8573-1

- Dew point (page 50-59)
- Residual oil (page 148-163)
- Particles (page 148 -163)

3

Energy monitoring (flow + consumption)

- Insertion version (page 92-94)
- Inline version (page 96-100)
- Compact version (page 102-105)
- CS Network Software (page 190-192)

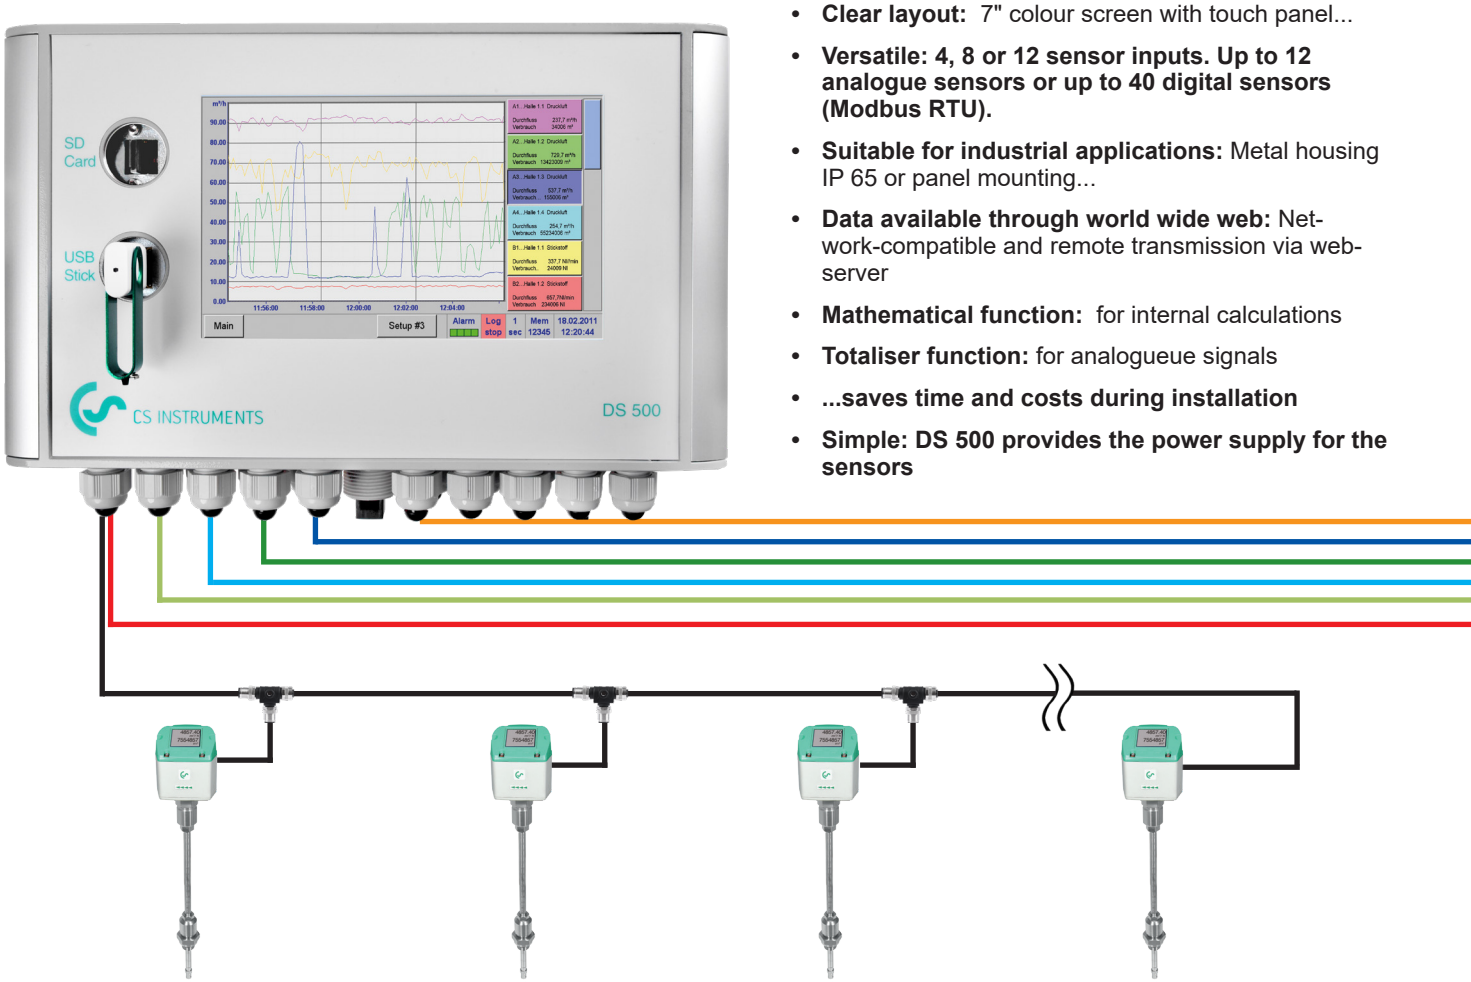

4

Leak detection

- Leak detector with camera - shows leakage rate in l/min and costs in € (page 164-187)
- CS Leak Reporter Software - creates detailed ISO 50001 reports (page 181)

DS 500 - Intelligent chart recorder for compressed air and gases

Measurement - control - indication - alarm - recording - evaluation

Advantages at a glance:

- **Clear layout:** 7" colour screen with touch panel...
- **Versatile: 4, 8 or 12 sensor inputs. Up to 12 analogue sensors or up to 40 digital sensors (Modbus RTU).**
- **Suitable for industrial applications:** Metal housing IP 65 or panel mounting...
- **Data available through world wide web:** Network-compatible and remote transmission via webserver
- **Mathematical function:** for internal calculations
- **Totaliser function:** for analogueue signals
- **...saves time and costs during installation**
- **Simple: DS 500 provides the power supply for the sensors**

DS 500 - The intelligent chart recorder of the next generation

Recording of the measured data, indication on a big colour screen, alerting, storage, not to mention remote read-out via webserver... this is all possible with DS 500.

All measured values, measurement curves and threshold value exceedances are indicated. The curve progressions from the beginning of the measurement can be viewed by an easy slide of the finger.

The big difference to ordinary paperless chart recorders reveals in the easy initiation and in the evaluation of the measured data. All sensors are identified directly and powered by DS 500. Everything is matched and tuned.

Mathematical function for internal calculations, e.g. the typical figures of a compressed air system:

- Costs in € per generated m³ air
- kWh/m³ generated air
- Consumption of single lines including summation

Totaliser function for analogueue signals (e.g. 0/4…20 mA, 0…10 V). In case of third-party sensors which e.g. only give a 4...20 mA signal for the actual flow in m³/h, a total counter reading in m³ can be generated by means of the totaliser function.

No time consuming studying of the instruction manual... this saves time. Internal voltage supply of all sensors, no wiring of external mains units ... this saves additional costs.

Flow meters for compressed air and gases

- Installation and removal under pressure via standard 1/2" ball valve
- A safety ring prevents the uncontrolled ejection in case of installation/removal under pressure
- Usable for different gases: Compressed air, nitrogen, argon, CO_2, oxygen…

Dew point sensors

- Extremely stable in the long term
- Quick adaption time
- Large measuring range (-80° to +20 °Ctd)
- For all dryers: (Adsorption dryers, membrane dryers and refrigeration dryers)
- Easy installation under pressure via the measuring chamber with quick coupling

Pressure sensors

- Large selection of pressure sensors with different measuring ranges for each measuring purpose
- Quick installation under pressure by quick coupling
- Pressure probe 0-10/16/40/100/250/400 bar overpressure
- Pressure probe -1 to +15 bar (underpressure/overpressure)
- Differential pressure 0...1.6 bar
- Absolute pressure 0 - 1.6 bar (abs)

- Large selection of temperature sensors e.g. for measurement of the ambient temperature or gas temperature
- Pt100 (2-wire or 3-wire)
- Pt1000 (2-wire or 3-wire)
- Temperature sensors with measuring transducer (4-20 mA output)

Temperature sensors

- Monitoring of compressed air quality according to ISO 8573
- Residual oil, particles, residual moisture

Compressed air quality measurement

- CS PM5110 current/effective power meters for panel mounting
- External current transformers for encompassing the phases (max. 2000 A)
- Measures kW, kWh, cos phi, kVar, kVA
- Data transfer DS 500 via Modbus

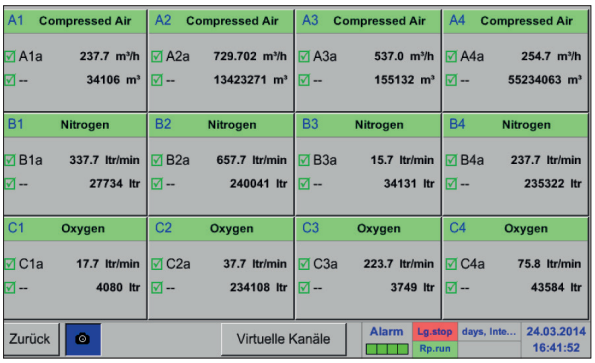

Current/effective power meters

By means of the intelligent chart recorder **DS 500**, all measuring data of a compressor station can be recorded, indicated and evaluated.

At **12 freely assignable sensor inputs**, all our sensors can be connected as well as any optional **third-party sensors and meters with the following signal outputs:**

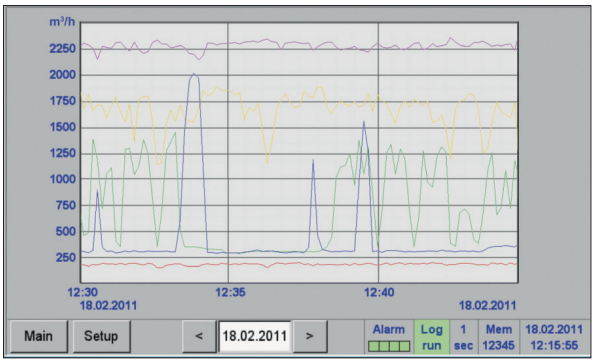

4-20 mA, 0-20 mA **I** 0-1 V / 0-10 V / 0-30 V **I** Pt 100 (2- or 3-wire), Pt 1000 (2- or 3-wire), pulse outputs (e.g. of gas meters) **I** Modbus protocol.

Measured values, statistics, curves with the 7" colour screen with touch panel

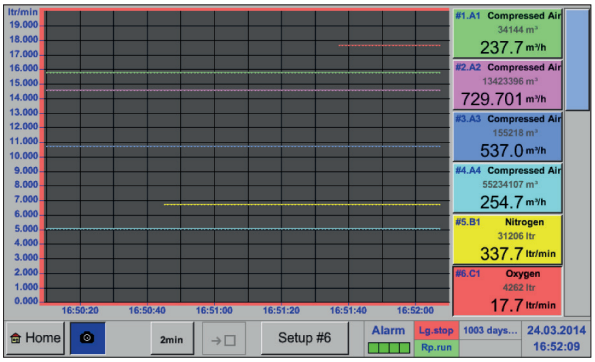

Actual measured values

All measured values can be seen at a glance.
Threshold value exceedances are indicated in red color.
A „measuring site name“ can be allocated to each sensor.

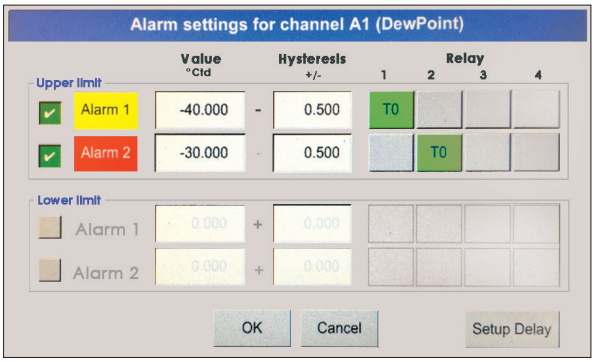

Graphic display

This display replaces the former evaluation of ordinary paper chart recorders and offers lots of advantages. The time axis can be moved by a finger slide.
The „zoom function by finger movement“ which enables an analysis of peak values is unique.

Actual measured values and graphic

Additionally to the measurement curves, the current measured values are indicated as well.

Adjustment of the alarm relays

Each one of the four alarm relays can be allocated individually to a connected sensor. The alarm thresholds and the hysteresis can be freely adjusted.
New: It is possible to set an alarm delay for each alarm relay so that the relay is only triggered after that period of time.

Technical data of the DS 500

TECHNICAL DATA DS 500	
Dimensions of housing:	280 x 170 x 90 mm, IP 65
Connections:	18 x PG for sensors and supply
Version panel mounting:	Cutout panel 250 x 156 mm
Weight:	3,5 kg
Material:	Die cast metal, front screen polyester
Sensor inputs:	• 4/8/12 sensor inputs for analogueue and digital sensors; freely allocatable. See options • Digital CS sensors for dew point and consumption with SDI interface FA/VA series, • Digital third-party sensors RS 485 / Modbus RTU, other bus systems realizable on request. • Analogue CS Sensors for pressure, temperature, clamp-on ammeters pre-configured. • Analogue third-party sensors 0/4...20 mA, 0...1/10/30 V, pulse, Pt 100 / Pt 1000, KTY
Voltage supply for sensor:	24 VDC, max. 130 mA per sensor, integrated mains unit max. 24 VDC, 25 W. In case of version 8/12 sensor inputs, 2 integrated mains units each max. 24 VDC, 25 W.
Interfaces:	USB stick, Ethernet / RS 485 Modbus-RTU / TCP, SDI other bus systems on request, webserver optional
Outputs:	• 4 relays (changeover contact 230 VAC, 6 A), alarm management, relays freely programmable, collective alarm • Analog output, pulse in case of sensors with own signal output looped, such as e.g. VA/FA series
Memory card:	Memory size 16 GB Micro SD card
Power supply:	100...240 VAC / 50-60 Hz, special version 24 VDC
Colour screen:	7" touch panel TFT transmissive, graphics, curves, statistics
Accuracy:	See sensor specifications
Operating temperature:	0…50 °C
Storage temperature:	-20…70 °C
Optional:	Web server

DESCRIPTION	ORDER NO.
DS 500 - intelligent chart recorder in basic version (4 sensor inputs)	0500 5000
Option: 4 additional sensor inputs for DS 500 V2	Z500 5501
Option: 8 additional sensor inputs for DS 500 V2	Z500 5502
Option: Integrated webserver	Z500 5003
Option: version for panel mounting	Z500 5006
Option: Power supply 24 VDC (instead of 100…240 VAC)	Z500 5007
Option: “Mathematics calculation function” for 4 freely selectable channels, (virtual channels): addition, subtraction, division, multiplication	Z500 5008
Option: “Totaliser function for analogue signals”	Z500 5009
External Gateway Profibus for connecting an integrated RS 485 interface	Z500 3008
CS Basic – data evaluation graphically and in tabular form - reading of the measured data via USB or Ethernet, license for 2 workstations	0554 8040
CS Network – energy monitoring with client/server solution (max. 20 measured values of different sensors/devices)	0554 8041
CS Network – energy monitoring with client/server solution (max. 50 measured values of different sensors/devices)	0554 8042
CS Network – energy monitoring with client/server solution (max. 100 measured values of different sensors/devices)	0554 8043
CS Network - Energy Monitoring with Client / Server Solution (max. 200 measured values of different sensors / devices)	0554 8044

Matching sensors can be found on pages 20 to 23

INPUT SIGNALS	
Current signals	(0…20 mA/ 4…20 mA)
Internal or external power supply	
Measuring range	0…20 mA
Resolution	0.0001 mA
Accuracy	± 0.03 mA ± 0.05 %
Input resistance	50 Ω
Voltage signal	(0…1 V)
Measuring range	0…1 V

Measuring range	-200…850 °C
Resolution	0.1 °C
Accuracy	± 0.2 °C (-100…400 °C) ± 0.3 °C (further range)
RTD Pt 1000	
Measuring range	-200…850 °C
Resolution	0.1 °C
Accuracy	± 0.2° (-100…400 °C)
Pulse	Min pulse length 500 µs
Measuring range	frequency 0...1 kHz max. 30 VDC

DS 400 - Chart recorder

for all relevant parameters of compressed air

Standard equipment:

- USB interface
- 3.5" graphic display with touch screen
- Integrated mains unit for supply of the sensors
- 4...20 mA analogue output of all connected active sensors
- Pulse output (for total consumption) in case of flow sensors
- 2 alarm relays (pot.-free changeover contacts, max. 230 V, 3 A)

Software options:

- Integrated webserver
- Mathematics calculation function
- Totaliser function

Hardware options:

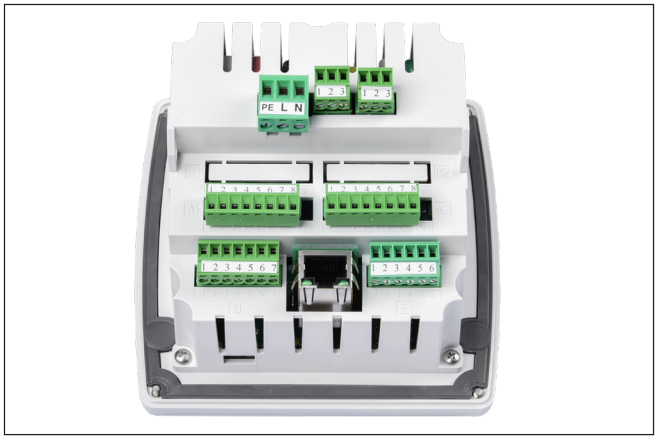

- Integrated data logger
- Ethernet / RS 485 interface
- Additional sensor inputs (digital or analogueue) selectable

The sensor inputs 1 and 2 and 3 and 4 can be selected according to the required sensors (see table pages 20 to 21):

Digital	Digital	Digital	Digital	Digital	Analogue	Analogue	Analogue	Analogue
m³/h, m³	°Ctd	A, kWh		bar		A	°C	°C
			MOD-BUS					4…20 mA 0…20 mA 0…10 V Pulse Pt 100 Pt 1000
Flow sensor	Dew point sensor	Current/ effective power meter	Third-party sensors with RS 485	Pressure sensor		Clamp-on ammeter	Temperature sensor	Third party sensor analogue output

Panel mounting

Back view

TECHNICAL DS 400	
Dimensions:	118 x 115 x 98 mm IP 54 (wall housing) 92 x 92 x 75 mm (panel mounting)
Inputs:	2 digital inputs for FA 5xx resp. VA 5xx
Interface:	USB interface
Power supply:	100…240 VAC, 50-60 Hz
Accuracy:	See sensor specifications
Alarm outputs:	2 relays, (pot.-free)
Options:	
Data logger:	100 million measured values start/stop time, measuring rate freely adjustable
2 additional sensor inputs:	For connection of pressure sensors, temperature sensors, clamp-on ammeters, third-party sensors with 4...20 mA, 0 to 10 V, Pt 100, Pt 1000

DESCRIPTION	Sensor input 1+2	Sensor input 3+4	ORDER NO.
DS 400 - Chart recorder with graphic display and touch screen	Digital (Z500 4003)	--------	0500 4000 D
	Digital (Z500 4003)	Digital (Z500 4003)	0500 4000 DD

Input resistance	1 MΩ
RTD Pt 100	
Measuring range	-200…850 °C
Resolution	0.1 °C
Accuracy	± 0.2 °C (-100…400 °C) ± 0.3 °C (further range)
RTD Pt 1000	
Measuring range	-200…850 °C
Resolution	0.1 °C
Accuracy	± 0.2° (-100…400 °C)
Pulse	Min pulse length 500 µs
Measuring range	frequency 0...1 kHz max. 30 VDC

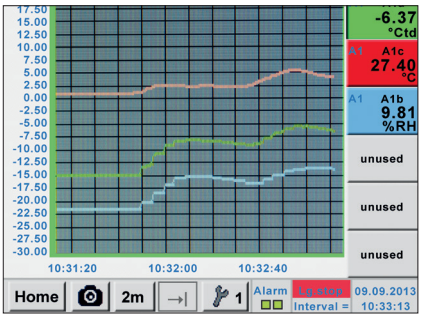

DS 500 / DS 400

Easy operation via touchscreen:

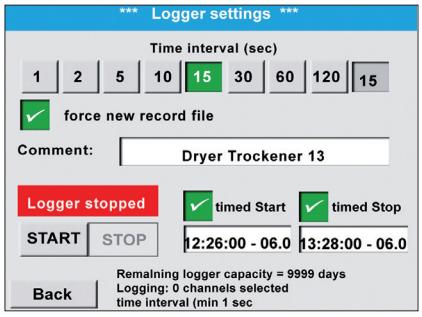

Configuration of flow sensor

In the menu of the DS 500 / DS 400, the flow sensor VA 5xx can be set to the respective pipe inside diameter. Furthermore, the unit, the gas type and the reference condition can be set. The meter reading can be set to “zero” if necessary.

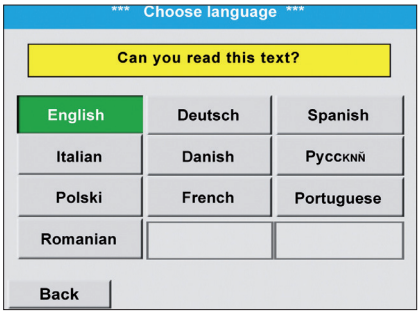

Graphic view

In the graphic view all measured values are indicated as curves. It is possible to browse back on the time axis by a slide of the finger (without data logger maximum 24 h, with data logger back to the start of the measurement).

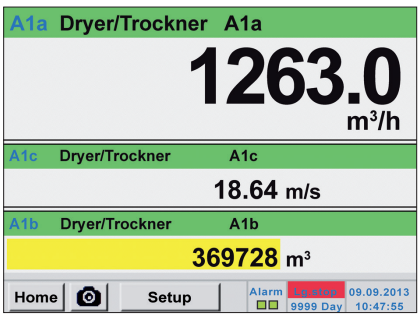

Data logger

With the option „integrated data logger“ the measured values are stored in the DS 500 / DS 400. The time interval can be freely set. Furthermore there is the possibility to fix the starting time and the end time of the data recording. Read-out of the measured data via USB interface or via the optional Ethernet interface.

Selection of the language

DS 500 / DS 400 “speaks” several languages. The desired language can be selected via the selection button.

All relevant parameters at a glance

In addition to the flow rate in m³ / h, the DS 500 / DS 400 also displays other parameters such as total consumption in m³ and speed in m/s.

Web server

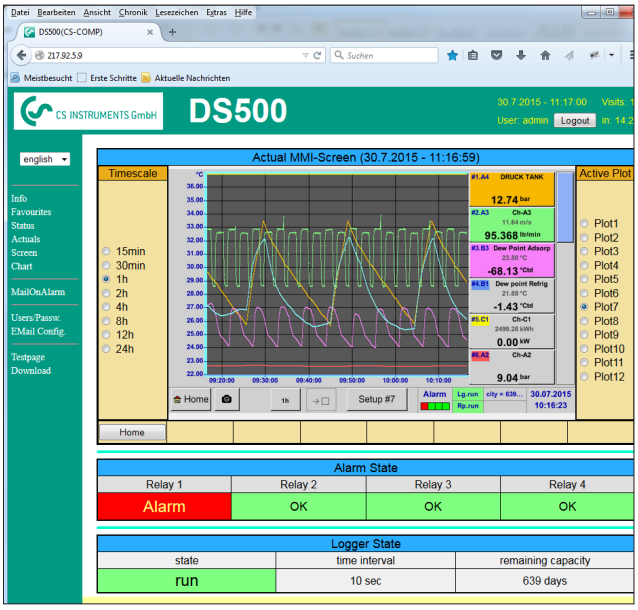

The new webserver with substantially extended features for the chart recorders DS 500 and DS 400 is available with immediate effect. Users can thereby get direct access to their measured data worldwide (current and historic ones) and display them on their smart phone, tablet or computer.

The new webserver can be ordered as an option with each stationary DS 500/400, but also for their mobile devices. For using the features of the webservers, the DS 500/400 must be set up with it's own IP address within the corporate network.

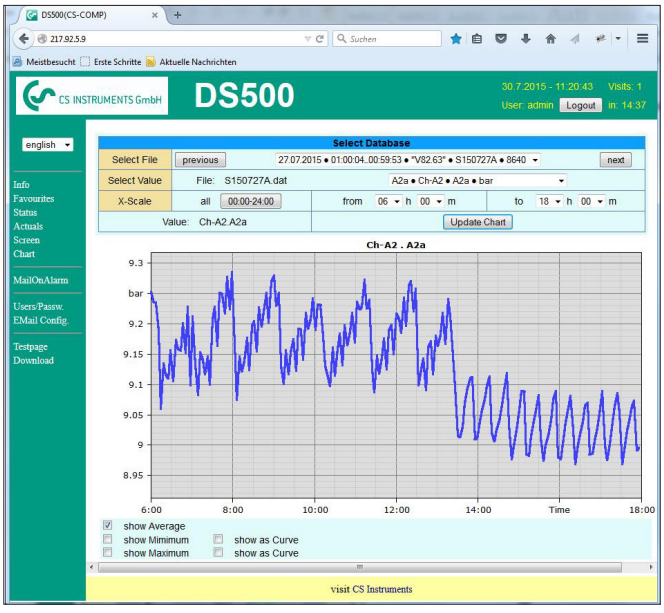

The web server in the DS 500/400 provides a website, which displays the measured values. This website can be accessed from smartphones, tablets and computers via the respectively installed browser. Advantage: This is all possible without the installation of any new or additional software.

View of the real time measured values (graphic table view)

View of the historic measured values as a single chart (time period freely selectable)

Access authorization

Different groups with different users/passwords can be assigned to different access levels.

Starting the data logger

In case of a stopped data logger the group operator or administrator can start the data logger remotely, via the web server.

PS: The new webserver can be retrofitted to any DS 500/DS 400 already in use.

Suitable sensors for DS 500 / DS 400

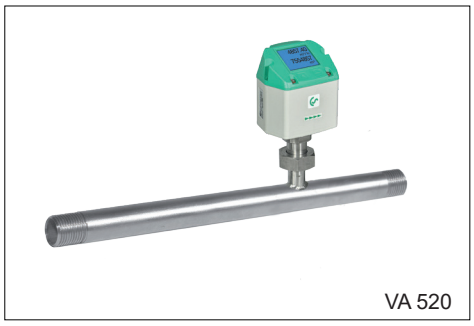

Flow meters for installation and removal under pressure (insertion type)

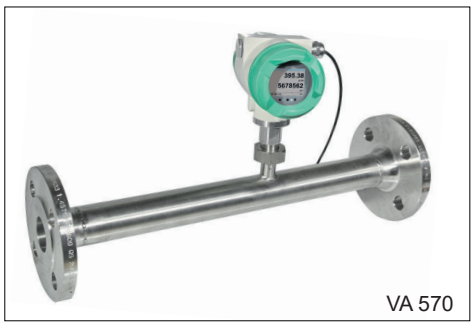

VA 500

VA 550

FLOW METERS INSERTION-VERSION	ORDER NO.
VA 500 meter in basic version: Standard (92.7 m/s), probe length 220 mm, without display	0695 5001
VA 550 Flow meter, measuring head in robust aluminium die casting housing	0695 0550 + order code A_…M…_

Inline flow meter

Clamp-on ammeter 0...400 A TRMS incl. 3 m connection cable with open ends	0554 0510

CS PM 5110 - Current/effective power meters for panel mounting

Measures voltage, current and calculates:

Effective power [kW]
Apparent power [kVA]
Reactive power [kVar]
Active energy [kWh]
cos phi

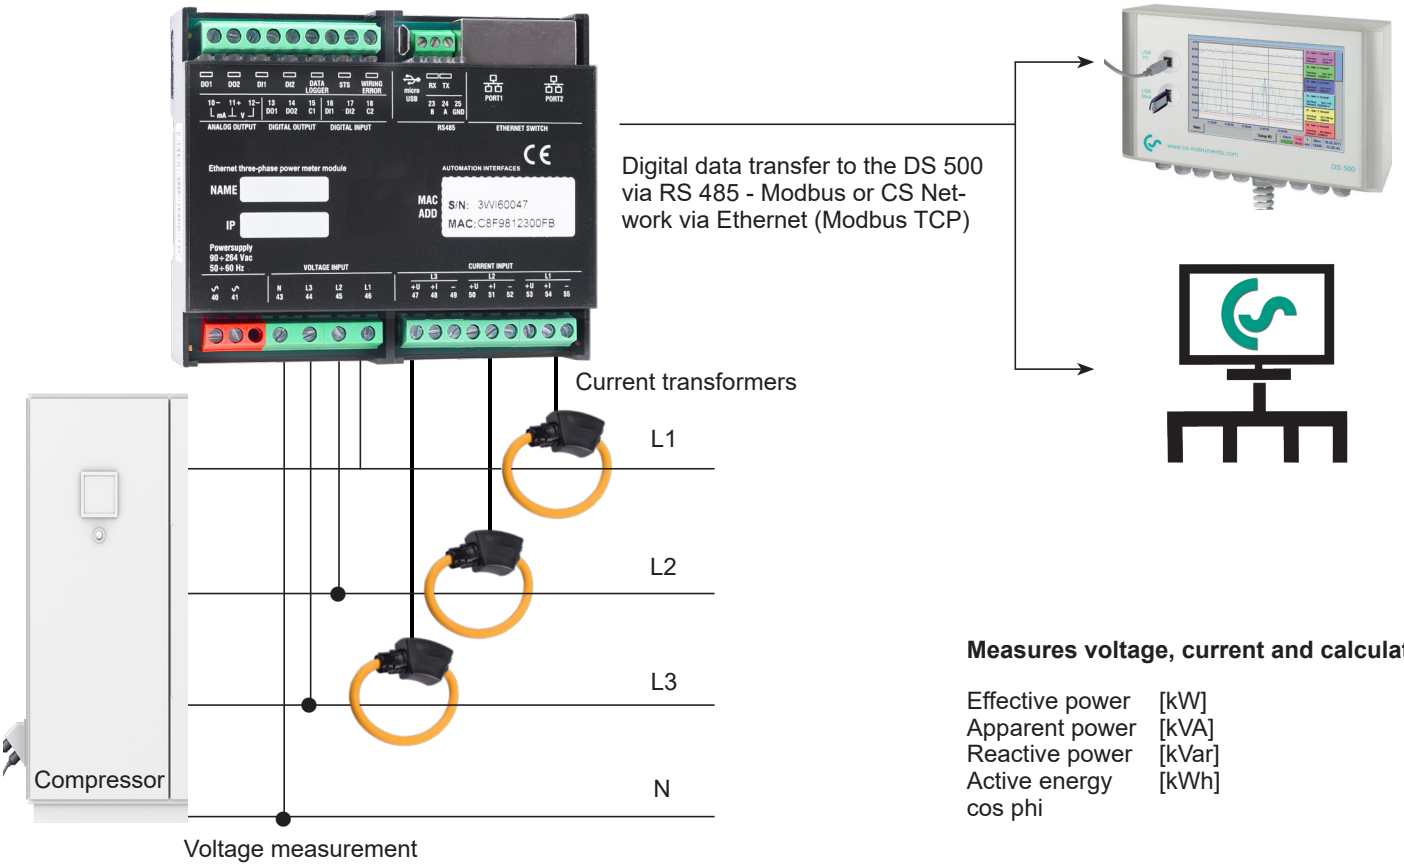

All measured data ar transmitted digitally (Modbus) to the DS 500 and can be recorded there.

DESCRIPTION	ORDER NO.
CS PM5110 Current/effective power meters for panel mounting, with RS485 interface	0554 5357
Install-construction for the CS PM5110, on top hat rail	0554 5356
Current transformer 100/5 A connectable to current/effective power meter for panel mounting (for cables up to Ø 21 mm)	0554 5344
Current transformer 200/5 A connectable to current/effective power meter for panel mounting (for cables up to Ø 21 mm)	0554 5345
Current transformer 300/5 A connectable to current/effective power meter for panel mounting (for cables up to Ø 22 mm)	0554 5346
Current transformer 500/5 A connectable to current/effective power meter for panel mounting (for cables up to Ø 22 mm)	0554 5347
Current transformer 600/5 A connectable to current/effective power meter for panel mounting (for cables up to Ø 22 mm)	0554 5348
Current transformer 1000/5 A connectable to current/effective power meter for panel mounting (for current bar up to 65 x 32 mm)	0554 5349
Current transformer 2000/5 A connectable to current/effective power meter for panel mounting (for current bar up to 127 x 38 mm)	0554 5350
Connection cable for probes 5 m, with open ends	0553 0108
Connection cable for probes 10 m, with open ends	0553 0109

TECHNICAL DATA PM5110	
Parameters:	Voltage (Volt) Current (Ampere) Cos phi Effective power (kW) Apparent power (kVA) Reactive power (kVar) Active energy (kWh) Power frequency (Hz) All parameters are transferred digitally to DS 500/ DS 400.
Accuracy current measurement:	± 0.5% from 1 to 6 A
Accuracy voltage:	± 0.5% from 50 V to 277 V
Accuracy active energy:	IEC 62053-21 Class 1
Interfaces:	RS 485 (Modbus protocol)
Measuring range:	Voltage measurement max. 600 VAC
Dimensions:	96 x 96 x 78.5 mm (W x H x D)
Operating temperature:	-10…+55 °C

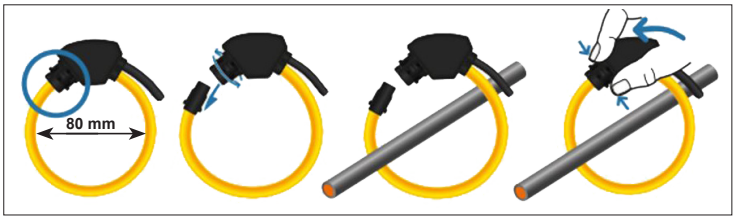

CS PM Flex - Current/effective power meter with Rogowski Coils

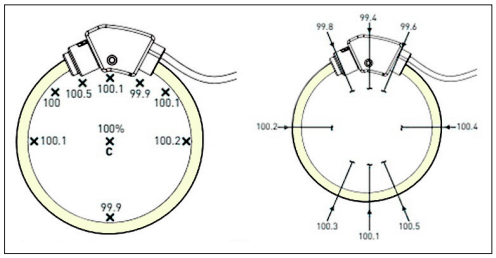

Measures voltage, current and calculates:

Effective power	[kW]
Apparent power	[kVA]
Reactive power	[kVar]
Active energy	[kWh]
cos phi	

Rogowski Coil:
The split coil bobbin allows subsequent, quick and easy installation

Accuracy range:
C: Conductor in centred position

DESCRIPTION	ORDER NO.
CS PM Flex Current/effective power meters for top-hat rail mounting, with RS485 and Ethernet interface	0554 5358
Rogowski Coil (Ø 80 mm) connectable to CS PM Flex incl. 3 m connection cable with open ends	0554 5359

TECNICAL DATA CS PM Flex	
Parameters:	Voltage (Volt) Current (Ampere) Cos phi Effective power (kW) Apparent power (kVA) Reactive power (kVar) Active energy (kWh) Power frequency (Hz) All parameters are transferred digitally to DS 500/ CS Network.
Measuring range:	**Voltage measurement:** max. 600 VAC, 45-65 Hz **Current measurement:** 10 - 3000 A @ 50 Hz 10 - 2500 A @ 60 Hz
Accuracy Current measurement / active energy:	± 0,5%
Accuracy voltage measurement:	± 0,2 %
Interfaces:	RS 485 and Ethernet
Dimensions:	90 x 107 x 32 mm (B x H x T)
Operating temperature:	-25…+55 °C

DS 500 mobile - Intelligent mobile chart recorder

The intelligent chart recorder of the future - energy analysis according to DIN EN 50001
Energy analysis - consumption measurement - leakage calculation at compressed air systems

Advantages at a glance:

- Easy operation via 7" colour screen with touch panel

Versatile:

- Up to 12 sensors / meters can be connected, including third-party sensors / counters incl. power supply

Reliable:

- Reliably stores all measured values on a memory card. Easy reading out via USB stick possible

Intelligent energy analysis:

- Costs in € per generated m³ air
- kWh/m³ generated air
- Consumption of single lines including summation

Easy & intuitive in its operation

Saves time & costs on installation

Technical data of DS 500 mobile

TECHNICAL DATA DS 500 MOBILE	
Case dimensions	384 x 264 x 164 mm
Weight:	4.5 kg
Material:	Diecast, front foil polyester, ABS
Sensor inputs:	4/8/12 sensor inputs for analogueue and digital sensors; freely allocatable. See options Digital CS sensors for dew point and flow with SDI interface FA/VA series, digital third-party sensors RS485 / Modbus RTU. Analogue CS Sensors for pressure, temperature, clamp-on ammeters preconfigured. Analogue third-party sensors 0/4...20 mA, 0...1/10/30 V, pulse, Pt 100 / Pt 1000, KTY, counter
Voltage supply for sensor:	24 VDC, max. 130 mA per sensor, integrated mains unit, max. 24 VDC, 25 W. For version 8/12 sensor inputs 2 integrated mains units, each max. 24 VDC, 25 W
Interfaces:	USB stick, Ethernet / RS 485 Modbus RTU / TCP, SDI other bus systems on request, webserver optionally, GSM module
Memory card:	Memory size 16 GB Micro SD memory card
Power supply:	100…240 VAC, 50-60 Hz
Colour screen:	7" touch panel TFT transmissive, graphics, curves, statistics
Accuracy:	Please see sensor specifications
Operating temperature:	0…50 °C
Storage temperature:	-20…70 °C

DS 500 mobile - Intelligent mobile chart recorder

The intelligent chart recorder of the future - energy analysis according to DIN EN 50001

If we talk about operating costs in compressed air systems, we are actually talking about the energy costs, because the electricity costs make up about 70-80% of the total cost of a compressed air system.

Depending on the size of the system, this means considerable operating costs. Even in smaller systems, this may quickly add up to €10,000 to 20,000 per year. This is an amount which can be considerably reduced - even in the case of well operated and maintained plants.

Does this also apply to your compressed air system? Which are your actual costs per generated m³ air? Which energy is gained due to the waste heat recovery? What is the total performance balance of your plant? How high are the differential pressures of single filters, how high is the humidity (pressure dew point), how much compressed air is used?

By means of the new intelligent chart recorder DS 500 mobile and the suitable sensors and meters all these questions can be answered easily. For example by means of a long-term measurement over 7 days, data recording and evaluation on the PC.

Touch screen

12 sensor inputs

Including voltage supply for all sensors

USB stick

Ethernet connection

Sensors for DS 500/DS 400 mobile

Flow meters for compressed air and gases

- Installation and removal under pressure via standard 1/2" ball valve
- A safety ring prevents the uncontrolled ejection in case of installation/removal under pressure
- Usable for different gases: Compressed air, nitrogen, argon, CO2, oxygen

Dew point sensors

- Extremely stable in the long term
- Quick adaption time
- Large measuring range (-80° to +20 °Ctd)
- For all dryers: (Adsorption dryers, membrane dryers and refrigeration dryers)
- Easy installation under pressure via the standard measuring chamber with quick coupling

Pressure sensors

- large selection of pressure sensors with different measuring ranges for each measuring purpose
- Quick installation under pressure by quick coupling
- Pressure sensor 0-10/16/40/100/250/400 overpressure
- Pressure probe -1 to +15 bar (underpressure/overpressure)
- Differential pressure 0...1.6 bar
- Absolute pressure 0 - 1.6 bar (abs)

Temperature sensors

- Large selection of temperature sensors e.g. for measurement of the ambient temperature or gas temperature
- Pt100 (2-wire or 3-wire)
- Pt1000 (2-wire or 3-wire)
- Temperature sensors with measuring transducer (4-20 mA output)

- Monitoring of compressed air quality according to ISO 8573
- Residual oil, particles, residual moisture

Compressed air quality measurement

- Particle counter PC 400 in a service case
- up to 0.1 µm or
- up to 0.3 µm

Compressed air quality measurement

- For the analysis of compressors (load and idle times, energy consumption, on/off cycles) the current consumption of up to 12 compressors is recorded by clamp-on ammeter
- Measuring range of the clamp-on ammeters:

0 - 400 A

0 - 1000 A

Clamp-on ammeters

- **CS PM 600** mobile current/effective power meter with external current transformers for large machines and systems
- External current transformers for encompassing the phases (100 A or 600 A)
- External magnetic measuring tip for measuring the voltage
- Measures KW, kWh, cos phi, kVar, kVA
- Data transmission **DS 500 mobile** via Modbus

Current/effective power meters

By means of the mobile chart recorder **DS 500 mobile**, all measuring data of a compressor station can be recorded, indicated and evaluated.

At **12 freely assignable sensor inputs**, all our sensors can be connected as well as any optional **third-party sensors and meters with the following signal outputs:**

4-20 mA, 0-20 mA I 0-1 V / 0-10 V / 0-30 V I Pt 100 (2- or 3-wire), Pt 1000 (2- or 3-wire), KTY I pulse outputs (e.g. of gas meters) I Modbus protocol

DS 500 PM mobile – Efficiency measurement for compressors

All-in-one measurement: electrical energy, pressure, dew point, temperature and consumption

Besides common measurements such as compressed air consumption or humidity, even more complex measurement tasks can be tackled with this all-round mobile device. With the DS 500 PM mobile, conducting an energy analysis according to DIN ISO 50001 is child's play.

Its clear, simple operating method makes it possible, for example, to carry out an analysis of compressed air costs by simultaneously measuring energy consumption (kW/kWh) and compressor output (m³/m³/h). And the data logger with its integrated effective power meter is perfect for auditors or service technicians.

Power consumption

Current rating	[A]
Voltage	[V]
Effective power	[kW]
Active energy	[kWh]
Apparent power	[kVA]
Reactive power	[kVar]
Cos phi	

Special features:

- Magnetic voltage measuring tips for picking off the voltage during operation.
- Hinged current transformers encompass the conductors of phases L1, L2, L3 or Rogowski Coil

  Can also be used during operation.

For universal use:

- Up to 11 devices can be connected, including third-party sensors incl. power supply

Reliable:

- Reliably stores all measured values on a memory card. Easy readout possible via USB stick

Energy analysis according to DIN ISO 50001:

- Costs in EUR per m³ air generated
- Specific output in kWh/m³
- Consumption of single lines including summation

Flow meters
for compressed air and gases

- Can be installed and removed under pressure via standard 1/2" ball valve
- A safety ring prevents uncontrollable ejection during installation/removal under pressure
- Can be used with different gases: compressed air, nitrogen, argon, CO_2, oxygen

Dew point sensors

- Extreme long-term stability
- Short adaption time
- Wide measuring range (-80° to +20° Ctd)
- For all dryers: (adsorption dryers, membrane dryers and refrigeration dryers)
- Easy to install under pressure using the standard measuring chamber with quick coupling

Pressure sensors

- Large selection of pressure sensors with different measuring ranges for each measuring purpose
- Quick to install under pressure by quick coupling
- Pressure sensor 0-10/16/40/100/250/400 overpressure
- Pressure probe -1 to +15 bar (underpressure/overpressure)
- Differential pressure 0...1.6 bar
- Absolute pressure 0 - 1.6 bar (abs)

Temperature sensors

- Large selection of temperature sensors e.g. for measurement of the ambient temperature or gas temperature
- Pt 100 (2-wire or 3-wire)
- Pt 1000 (2-wire or 3-wire)
- Temperature sensors with measuring transducer (4-20 mA output)

Compressed air quality

- Monitoring of compressed air quality according to ISO 8573
- Residual oil, particles, residual moisture
- Particle counter PC 400 in service case up to 0.1 µm or up to 0.3 µm

Compressed air consumption

Pressure dew point

Pressure

Temperature

Residual oil/particles

Mobile electricity/effective power meter
CS PM 600

Compressed air generated

Compressed air flow	[m³]
Pressure dew point	[° Ctd]
Pressure	[bar]
Temperature	[° C/°F]
Residual oil content	[mg/m³]
Particle content	[Cts/m³]

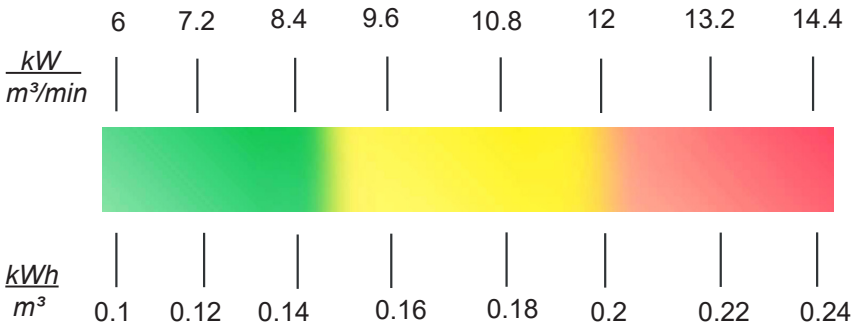

With one or more additional electricity/effective power meters, it is possible to carry out efficiency measurements of several compressors simultaneously.

Analysis of specific power:

By measuring power consumption and delivery volume simultaneously, it is possible to calculate the specific power of the compressor. The specific power is calculated using the ratio of the required energy consumption in kWh to the volume of air in m^3 output during the same period.

$$\text{Specific power} = \frac{kWh}{m^3}$$

The specific performance indicator of the compressor supplies information about the compressor's characteristics. The 'traffic light' graphic below can be used as an aid to assessment:

A typical specific power requirement for an oil-injected compressor might look something like this:

Delivery volume: 43.7 Nm³/min
(according to ISO 1217 based on 20° C + 1 bar)

Total power consumption: 272.7 kW

Specific power requirement = 272.7 kW/43.7 m³/min
= 6.24 kW/m³/min
= 0.104 kWh/m³

DS 500 PM MOBILE TECHNICAL DATA	
Case dimensions:	360 x 270 x 150 mm
Weight:	4.5 kg
Material:	Diecast, front foil polyester, ABS
Sensor inputs:	3/7/11 sensor inputs for analogue and digital sensors; freely allocatable. See options Digital CS sensors for dew point and consumption with FA/VA series SDI interface, RS 485/Modbus RTU digital third-party sensors. Analogue CS Sensors for pressure, temperature, clamp-on ammeters preconfigured. Analogue third-party sensors 0/4...20 mA, 0...1/10/30 V, pulse, Pt 100/Pt 1000, KTY
Voltage supply for sensors:	24 VDC, max. 130 mA per sensor, integrated mains unit, max. 24 VDC, 25 W. For 8/12 sensor input version: 2 integrated mains units, each max. 24 VDC, 25 W
Interfaces:	USB stick, Ethernet/RS 485 Modbus RTU/TCP, SDI (other bus systems on request), webserver optional
Memory card:	Micro SD memory card, memory size 16 GB
Power supply:	100…240 VAC, 50-60 Hz
Colour display:	TFT transmissive 7" touch panel, graphics, curves, statistics
Accuracy:	Please see sensor specifications
Operating temperature:	0…50° C
Storage temperature:	-20…70° C

Example order code for DS 500 PM mobile:
0500 5340_A1_B1_C1_D1_E1

Number of additional sensor inputs	
A1	3 inputs
A2	7 inputs
A3	11 inputs

Current transformers – set consisting of 3 transformers (recommendation refers to 400 volt)	
B1	100 A/1 A – up to 55 kW
B2	600 A/1 A – up to 340 kW
B3	1000 A/1 A – up to 600 kW
B4	3000 A @ 50 Hz / 2500 A @ 60 Hz

Mathematics calculation function (4 virtual channels)	
C1	without mathematics calculation functions
C2	with mathematics calculation functions

Totaliser function for analogue signals	
D1	without totaliser function for analogue signals
D2	with totaliser function for analogue signals

Webserver	
E1	without web server

TECHNICAL DATA CURRENT/ACTIVE POWER METER	
Parameters:	Voltage (Volt) Current (Ampere) Cos phi Effective power (kW) Apparent power (kVA) Reactive power (kVar) Active energy (kWh) Power frequency (Hz)
Measuring range:	**Voltage measurement:** B1 - B3: max. 400 V B4: max: 600 V, 45-65 Hz
Sensor connections:	3x current transformers or Rogowski coils (L1, L2, L3), 4x voltage measurements (L1, L2, L3, N)
Current transformer size / Rogowski Coil:	100 A / 1 A (max. 24 mm conductor), 600 A / 1 A (max. 36 mm conductor) 1000 A / 1 A (max. 43 x 42 mm conductor) 3000 A (Ø 80 mm)

DESCRIPTION	ORDER NO.
DS 500 PM mobile chart recorder with integrated effective power meter for the analysis of compressors and other consumers	0500 5340 + Order code A_...E_
CS Basic – data evaluation in graphic and table form. Readout of measured data via USB or Ethernet. Licensed for 2 work sites	0554 8040
CS Soft Energy Analyzer for energy and leakage analysis of compressed air stations	0554 7050
Connection cable for pressure, temperature and third-party sensors to mobile devices, ODU/open ends, 5 m	0553 0501
Connection cable for pressure, temperature and third-party sensors to mobile devices, ODU/open ends, 10 m	0553 0502
Connection cable for VA/FA sensors to mobile devices, ODU/M12, 5 m	0553 1503
Extension cable for mobile devices, ODU/ODU, 10 m	0553 0504
Case for all sensors (dimensions: 500 x 360 x 120 x mm)	0554 6006

DS 400 mobile - Affordable mobile chart recorder

Energy analysis - consumption measurement - leakage calculation at compressed air systems

Advantages at a glance:

- Easy operation via 3.5" colour screen with touch panel
- Internally rechargeable Li-Ion battery - about 8 hours continuous operation

Versatile:

- Up to 4 sensors / meters can be connected, including third-party sensors / counters incl. power supply

Reliable:

- Reliably stores all measured values on a memory card. Easy reading out via USB stick possible

Intelligent energy analysis:

- Costs in € per generated m³ air
- kWh/m³ generated air
- Consumption of single lines including summation

Up to 4 sensors can be connected including power supply for all sensors

Sensors for DS 500 / DS 400 mobile

Digital	Digital	Digital / Analogue	Analogue

Flow meters for compressed air and gases

- Installation and removal under pressure via standard 1/2" ball valve
- A safety ring avoids the uncontrolled ejection in case of installation/removal under pressure
- Usable for different gases: Compressed air, nitrogen, argon, CO2, oxygen

Dew point sensors

- Extremely stable in the long term
- Quick adaption time
- Large measuring range (-80° to +20 °Ctd)
- For all dryers: (Adsorption dryers, membrane dryers and refrigeration dryers)
- Easy installation under pressure via the standard measuring chamber with quick coupling

Pressure sensors

- Large selection of pressure sensors with different measuring ranges for each measuring purpose
- Quick installation under pressure by quick coupling
- Pressure probe 0-10/16/40/100/250/400 overpressure
- Pressure probe -1 to +15 bar (underpressure/overpressure)
- Differential pressure 0...1.6 bar
- Absolute pressure 0 - 1.6 bar (abs)

Temperature sensors

- Large selection of temperature sensors e.g. for measurement of the ambient temperature or gas temperature
- Pt 100 (2- or 3-wire)
- Pt 1000 (2- or 3-wire)
- Temperature sensors with measuring transducer (4-20 mA output)

- Monitoring of compressed air quality according to ISO 8573
- Residual oil, particles, residual moisture

Compressed air quality measurement

- Particle counter PC 400 in a service case
- up to 0.1 µm or
- up to 0.3 µm

Compressed air quality measurement

- For the analysis of compressors (load and idle times, energy consumption, on/off cycles) the current consumption of up to 12 compressors is recorded by clamp-on ammeter
- Measuring range of the clamp-on ammeters:

0 - 400 A

0 - 1000 A

Clamp-on ammeters

- **CS PM 600** mobile current/effective power meter with external current transformers for large machines and plants
- External current transformers for encompassing the phases (100 A or 600 A)
- External magnetic measuring tip for measuring the voltage
- Measures KW, kWh, cos phi, kVar, kVA
- Data transmission **DS 400 mobile** via Modbus

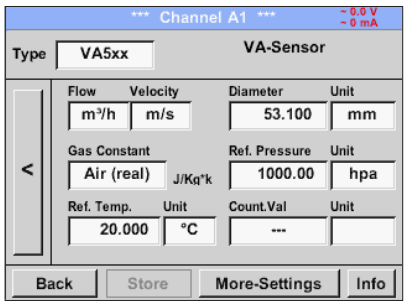

Current/effective power meters

Analogue	Digital	Analogue	Digital

By means of the chart recorder **DS 400 mobile**, all measured data of a compressor station can be recorded, indicated and evaluated. All sensors of our product range can be connected to the **digital sensor inputs**, e.g.:

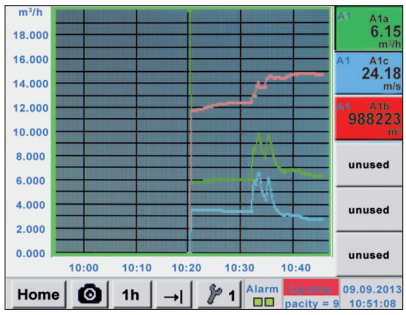

flow meters, dew point sensors, current/effective power meters and third-party sensors with Modbus (RS 485).

At **analogue sensor inputs** third party sensors and meters with the following signal output could be connected: 4-20 mA, 0-20 mA | 0-1 V / 0-10 V / 0-30 V | Pt 100 (2- or 3-wire), Pt 1000 (2- or 3-wire), pulse outputs (e.g. of gas meters), Modbus protocol

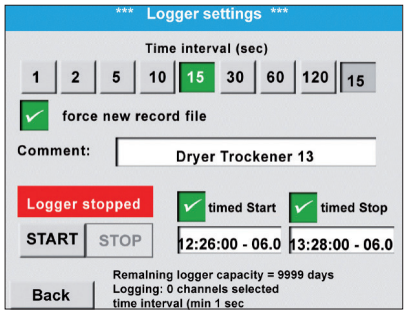

Configuration of flow sensor

In the menu of the DS 500 mobile / DS 400 mobile, the flow meter VA 500 can be set to the respective pipe inside diameter. Furthermore, the unit, the gas type and the reference condition can be set. The meter reading can be set to “zero” if necessary.

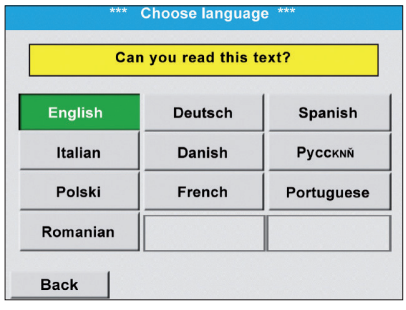

Graphic view

In the graphic view all measured values are indicated as curves.
It is possible to browse back on the time axis by a slide of the finger (without data logger maximum 24 h, with data logger back to the start of the measurement).

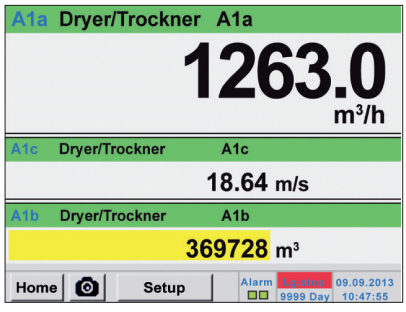

Data logger

With the option “integrated data logger”, the measured values are stored in the DS 500/DS 400. The time interval can be freely set. Furthermore there is the possibility to fix the starting time and the end time of the data recording. Read-out of the measured data via USB interface or via the optional Ethernet interface.

Selection of the language

Many languages are already stored in every DS 500 mobile/ DS 400 mobile. The desired language can be selected via the selection button.

All relevant parameters at a glance

In addition to the flow rate in m³/h, the DS 500 mobile/DS 400 mobile also displays other parameters such as total consumption in m³ and speed in m/s.

Technical data of DS 400 mobile

TECHNICAL DATA DS 400 MOBILE	
Dimensions:	270 x 225 x 156 mm (W x H x D)
Weight:	2.2 kg
Inputs:	2 x 2 sensor inputs for digital or analogueue sensor signals
Interface:	USB (standard), Ethernet (optional)
Power supply:	Internal rechargeable Li-Ion batteries, approx 8 h continuos operation, 4 h charging time
Options:	
Integrated data logger:	100 million measured values start/stop time, measuring rate freely adjustable
2 additional sensor inputs:	For connection of pressure sensors, temperature sensors, clamp-on ammeters, third-party sensors with 4...20 mA, 0 to 10 V, Pt 100, Pt 1000

INPUT SIGNALS

PI 500 - Hand-held measuring device for the industry

The new **PI 500** is an all-purpose hand-held measuring device for many applications in the industry, like e. g.:

- **Flow measurement**
- **Pressure/vacuum measurement**
- **Temperature measurement**
- **Moisture/dew point measurement**

The graphic indication of colored measurement curves is inimitably.
Up to 100 million measured values can be stored with date and name of measuring site. The measured values can be transferred to the computer by means of a USB stick. The data can be conveniently evaluated with the CS Basic software.

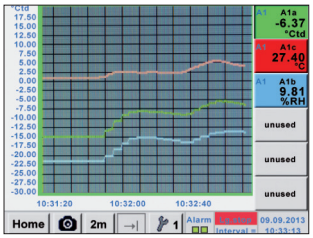

Measured data and service reports can be issued easily and quickly. The following probes can optionally be connected to the freely configurable sensor input of PI 500:

- Pressure sensors (high and low pressure)
- Flow probes, VA 500/VA 520
- Temperature sensors Pt 100, Pt 1000/4…20 mA
- Dew point sensors FA 510
- Effective power meters
- Optional third-party sensors with the following signals: 0...1/10 V, 0/4...20 mA, Pt 100, Pt 1000, pulse, Modbus

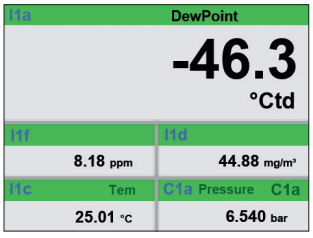

Special features:

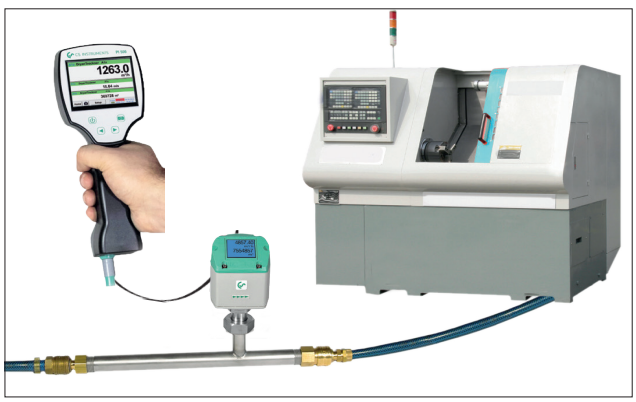

- Universal sensor input for many common sensor signals
- Internal rechargeable Li-Ion batteries (approx. 12 h continuous operation)
- 3.5" graphic display / easy operation via touch screen
- Integrated data logger for storage of the measured values
- USB interface for reading out via USB stick
- International: International: Up to 8 languages selectable

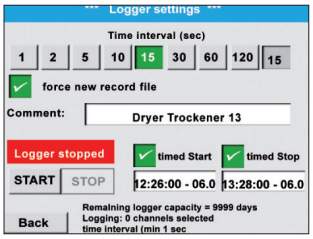

Measurement curves are displayed graphically, so the operator sees at a glance the behaviour of the dryer from the start of the measurement.

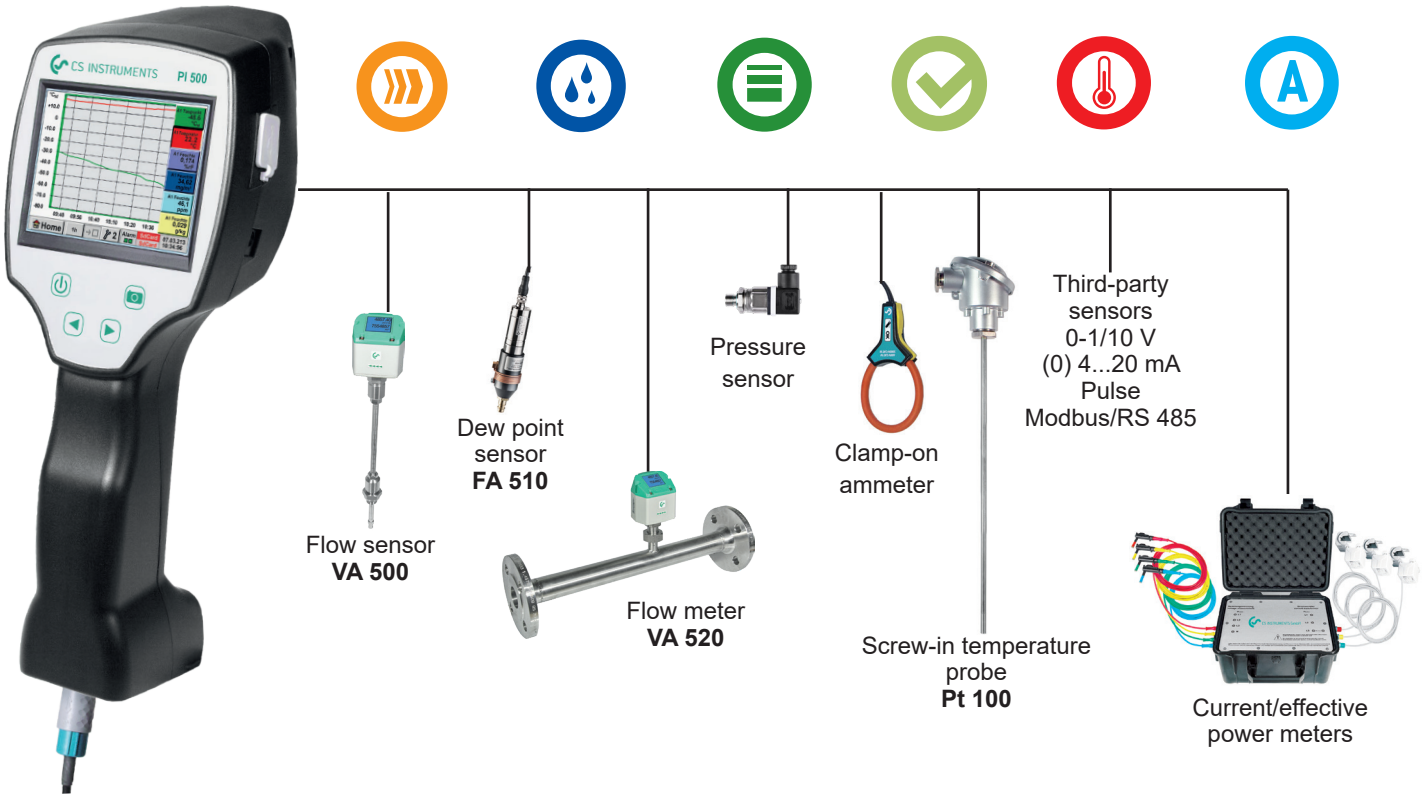

All physical parameters of the humidity measurement are calculated automatically. The PI 500 also displays the measured values of the external sensor.

Up to 100 million measured values can be stored. Each measurement can be stored with a comment, e.g. measuring site name. The time interval can be freely set.

PI 500 - Hand-held measuring instrument with large sensor selection

DESCRIPTION	ORDER NO.

Clamp-on ammeter 0...400 A TRMS incl. 3 m connection cable	0554 0511

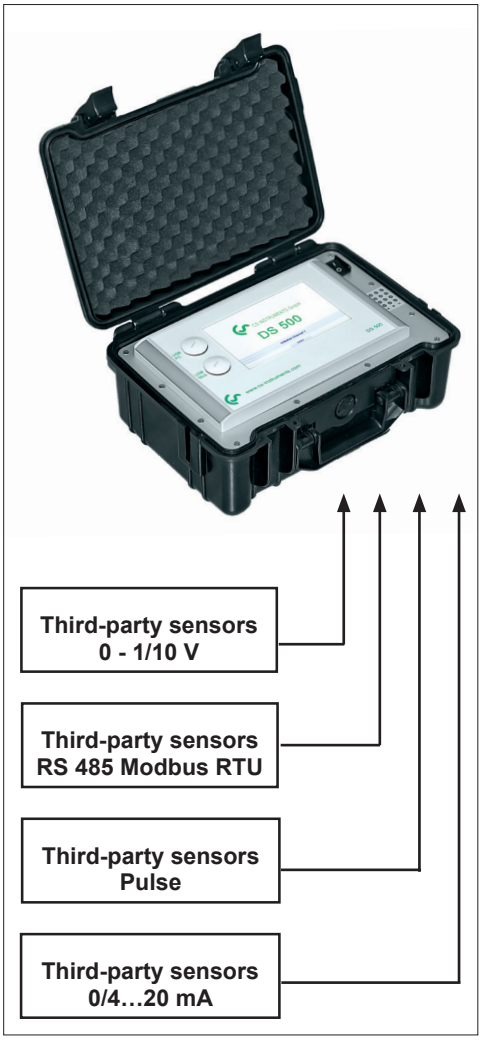

Suitable sensors for DS 500 mobil, DS 400 mobil, PI 500

CURRENT/EFFECTIVE POWER METER	ORDER NO.
CS PM 600 mobile current/effective power meter up to 100 A	0554 5341
CS PM 600 mobile current/effective power meter up to 600 A	0554 5342

- Mobile current/effective power meter with 3 external current transformers for big machines and systems
- External current transformers for encompassing the phases (100 A or 600 A)
- External magnetic measuring tip for picking off the voltage – measures kW, kWh, cos, phi, Var, kVA
- Data transfer to DS 500 mobile / DS 400 mobile via Modbus
- Incl. connection cable for mobile current/effective power meter, 5 m

Current transformer 100A/1A consisting of 3 transformers for mobile instruments	Z554 0001
Current transformer 600A/1A consisting of 3 transformers for mobile instruments	Z554 0002
Current transformer 1000A/1A consisting of 3 transformers for mobile instruments	Z554 0003

ANY THIRD-PARTY SENSOR CONNECTABLE

Additionally, any third-party sensors with the following signal outputs can be connected:

- 4-20 mA
- 0-20 mA
- 0-1 V/0-10 V/0-30 V
- Pt 100 (2- or 3-wire)
- Pt 1000 (2- or 3-wire)
- Pulse outputs (e. g. of gas meters)
- Frequency output
- Modbus protocol

CS PM 600 - Mobile current/effective power meter suitable for: DS 500 mobile / DS 400 mobile / PI 500

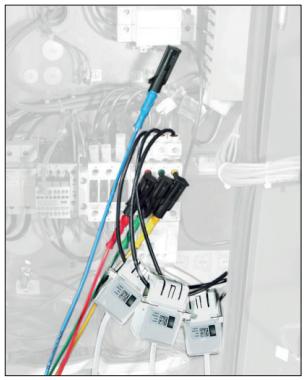

Measures voltage, current and calculates:

Effective power [kW]
Apparent power [kVA]
Reactive power [kVar]
Active energy [kWh]
cos phi

Current transformer can be opened

Magnetic voltage measuring tips electrically isolated

Special features:

- Magnetic voltage measuring tips for picking off the voltage during operation
- Hinged current transformers encompass the conductors of the phases L1, L2, L3. This can also be done during operation

DESCRIPTION	ORDER NO.
CS PM 600 mobile current/effective power meter 100 A	0554 5341
CS PM 600 mobile current/effective power meter 600 A • Mobile current/effective power meter with 3 external current transformers for big machines and systems • External current transformers for encompassing the phases (100 A or 600 A) • External magnetic measuring tip for measuring the voltage • Measures kW, kWh, cos, phi, kVar, kVA • Data transfer via Modbus • Incl. connection cable for mobile current/effective power meter to mobile instruments, 5 m	0554 5342
Current transformer 100A/1A consisting of 3 transformers for mobile instruments	Z554 0001
Current transformer 600A/1A consisting of 3 transformers for mobile instruments	Z554 0002
Current transformer 1000A/1A consisting of 3 transformers for mobile instruments	Z554 0003

All measured data are transferred digitally (Modbus) to DS 500 mobile/ DS 400 mobile and can be recorded there.

Example: Measurement on the compressor

TECHNICAL DATA CS PM 600	
Parameters:	Voltage (Volt) Current (Ampere) Cos phi Effective power (kW) Apparent power (kVA) Reactive power (kVar) Active energy (kWh) Power frequency (Hz) All parameters are transferred digitally to DS 500 mobile /DS 400 mobile
Accuracy current measurement:	Threshold values for current deviation. Loss angle according to IEC 60044-1. Current deviation in % at rated current in 120% 1 100% 1 20% 1.5 5% 3
Accuracy active energy:	IEC 62053-21 Class 1
Sensor connections:	3 x current transformers (L1,L2,L3,N) 4 x voltage measurement (L1,L2,L3)
Interfaces:	RS 485 (Modbus protocol)
Measuring range:	Voltage measurement max. 400 Volt (in special version up to 480V) Current measurement max. 100 A or 600 A
Size current transformers:	100 A / 1 A (max. 24 mm wire), 600 A / 1 A (max. 36 mm wire)
Dimensions case:	270 x 225 x 156 mm (B x H x T)
Operating temperature:	- 10…+40 °C

Energy analysis - consumption measurement - leakage calculation

DS 500 mobile - Energy analysis according to DIN EN 50001

If we talk about operating costs in compressed air systems, we are actually talking about the energy costs, because the electricity costs make up about 70-80% of the total cost of a compressed air system. Depending on the size of the system, this means considerable operating costs.

Even in smaller systems, this may quickly add up to €10,000 to 20,000 per year. This is an amount which can be considerably reduced – even in case of well operated and maintained plants. This will also apply to your compressed air system without a doubt!

Which are your actual costs per generated m³ air? Which energy is gained due to the waste heat recovery? What is the total performance balance of your plant?

What is the differential pressure of individual filters? What is the humidity (pressure dew point)? How much compressed air is consumed?

Although compressed air is one of the most expensive forms of energy, there are often enormous energy losses in factories, especially in this area.

They are mainly caused by the following factors:

- **Disuse of the waste heat**
- **Leakages of up to 50%**
- **Missing compressor control system**
- **Compressed air losses**

Lots of systems are not adapted to the actual demand or they are in need of repair. Leak curing programs could save about 1.7 million tons of carbon dioxide emissions per year. (Source: Fraunhofer Institut, Karlsruhe).

So there is a considerable amount of possible energy savings slumbering in the compressed air lines of lots of enterprises. To tap into this, the heat generated during compressed air generation should be used to heat the space or to heat water.

Furthermore, it is important to optimise the control of compressed air stations because this will lead to considerable energy savings in any case. Also the restoration of an ailing or no longer suitable compressed air supply will pay off after only a short period of time. Losses due to leakages within the pipe network incur high costs.

This table shows the annual energy costs incurred by leaks:

Hole diameter	Air loss at		Energy loss at		Cost at	
mm	6 bar (1/s)	12 bar (1/s)	6 bar (kWh)	12 bar (kWh)	6 bar (€)	12 bar (€)
1	1.2	1.8	0.3	1.0	144.00	480.00
3	11.1	20.8	3.1	12.7	1488.00	6096.00
5	30.9	58.5	8.3	33.7	3984.00	16176.00
10	123.8	235.2	33.0	132.0	15840.00	63360.00

(Source: compressed air efficiency, kW x €0.06 x 8000 working hours per year)

Energy resources like electricity, water and gas are usually monitored and therefore the costs are transparent.

Water consumption, for example, is precisely measured with consumption meters. Contrary to compressed air, a water leak is visible for all to see straight away and therefore fixed immediately. Leakages in the compressed air network „blow out“ unnoticed, even on weekends and during production stops.

The compressors continue to run during this time just to maintain a constant pressure in the network. For mature compressed air networks, the leak rate can be between 25 and 35 percent. They are the most industrious consumers working 365 days a year.

Not considered in these considerations are the costs of “producing clean and dry” compressed air. Refrigeration and adsorption dryers dry the air with significant operating costs, which then “blows out” uselessly.

With ever-increasing energy costs, these potential savings must be used more and more to stay competitive within the market. Savings potential can only be exploited if the consumption of individual machines or systems is known and made transparent for all.

When introducing an energy management system according to DIN EN 16001, all consumers have to recorded in the first step. This gives the user an overview of what is being consumed. This transparency makes it possible to deliberately intervene and save energy. In compressed air systems this means, in the first step, to detect and eliminate leaks.

Especially for the complete monitoring and consumption analysis of compressor stations and compressed air lines we developed a portable measuring system, the DS 500 mobile. DS 500 mobile meets with all requirements for analyzing a compressed air system.

In addition to the evaluation of standard sensors such as for example:

- **Flow meters,**
- **Pressure dew point,**
- **Pressure,**
- **Differential pressure,**
- **Absolute pressure,**
- **Temperature sensors**

, the connection of all kinds of third-party sensors such as:

- **Pt 100**
- **Pt 1000**
- **0/4…20 mA**
- **0-1/10 V**
- **pulse**
- **RS 485 Modbus etc.**

is also possible. One of the main advantages of DS 500 mobile is the possibility to connect not only clamp-on ammeters but also external power meters, water meters or heat meters. As such, the current costs can be included very accurately in the analysis and typical figures of a compressed air plant can be determined.

DS 500 mobile enables an intelligent energy analysis in a quick and easy way. The data will be indicated immediately in the display.

For this purpose just the costs in € per kWh (please consider day and night tariff) have to be entered.

By means of a mathematical function typical calculations can be carried out like for example:

- **Costs in € per generated m³ of compressed air**
- **Specific output in kWh/m³**
- **Consumption of single compressed air lines including summation**
- **Indication of Min-Max values, average value**

If the minimum values rise continuously over the years this is a clear signal that the leakage rate increases. This can easily be determined by carrying out the measurements in regular intervals.

Consumption analysis including statistics at the touch of a button

Besides the compressed air also all other energy costs like current, water, vapor etc. can be recorded in this evaluation. This creates transparency.

So all energy and flow meters for compressed air, gas, water, vapor and so on can be recorded and evaluated. The customer gets the costs in €uro.

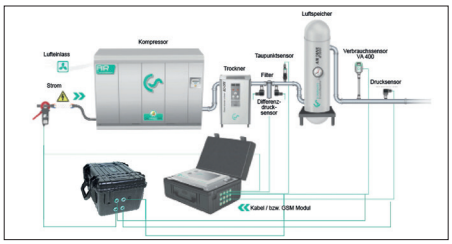

On the big 7" colour display with touch panel, all information is visible at a glance. By means of the evaluation software CS Soft Basic all data can be evaluated online at the PC via a USB stick or Ethernet.

Additionally to the consumption analysis as daily/weekly or monthly report an alarm can be sent by e-mail or SMS in case of threshold value exceedance.

The measured data can be retrieved all over the world via the webserver, GSM module.
How is this done in practice?

Step 1: Measurement

It is a special advantage that up to 12 compressors can be measured with one DS 500 mobile at the same time.

Step 2: Analysis

2.1) Compressor analysis (current-/ power measurement)

The energy consumption of every single compressor is measured by means of a clamp-on ammeter. The produced compressed air quantity is calculated by the software on a basis of the performance data of the compressor which have to be entered.

- **The following parameters are calculated additionally:**
- **Energy consumption in (kWh),**
- **Load,**
- **Idle,**
- **Stop time,**
- **Compressor load in %,**
- **Number of load/unload cycles, specific output in kWh/m³,**
- **Costs in €/m³**

2.2) System analysis (current measurement and real consumption measurement)

The system analysis has the same function like the compressor analysis, however, it additionally offers the possibility to measure the actually produced resp. used quantity of compressed air by means of the flow sensor VA 500.

With the additional „real consumption measurement“ the leakages and therefore the cost share of the leakages in comparison to the total costs in € can be determined.

2.3) Leakage calculation

The leakage calculation is carried out during production-free time (shutdown, weekend, holidays). The flow meter VA 500 measures the actual supplied quantity. The compressor delivers compressed air during this down time, in order to maintain a constant pressure.

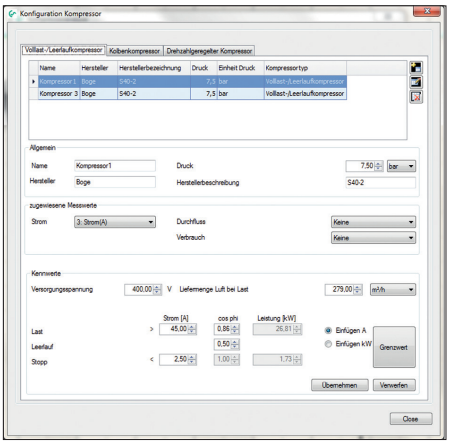

According to statistics, even if production is carried out day and night, there is at least one short period of time during which all load is switched off. By means of this data, the software defines a calculated leakage rate and calculates the incurred leakage costs in €.

Step 3: Evaluation at the PC with graphics and statistics

3.1) Entry of necessary parameters

Specific data have to be entered before the analysis is carried out:

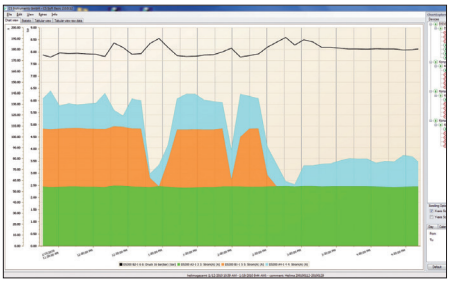

- **Selection of compressor type (load/ idle resp. variable speed drive controlled)**
- **As well as entry of the performance data according to data sheet**
- **Period of measurement**
- **Costs in € for 1 kWh**

3.2) Graphic evaluation with day view and week view

Everything at a glance:

The user gets a day and week view of all stored measured data with his company logo (can be easily integrated) at the touch of a button. By means of the zoom and the cross lines function peak values can be determined.

3.3) Compressed air costs in €

At the touch of a button the user gets all important data like e. g.:

- **Electricity costs**
- **Compressed air costs**
- **Leakage costs in €**
- **Compressor data with load/ idle times**
- **Specific output in kWh/m³**
- **Costs per m³ in €**

4) Measures

Based on these analysis some measures should be carried out in order to optimize the compressed air system. These measures may differ from system to system, however, normally there are the following possibilities:

- **Please check whether there are leakages in the compressed air system and localize them. Usually they occur at weld seams and junctions. (50 holes with a diameter smaller than 1 mm may cause incur of € 11,000 per year).**
- **By means of the load/idle analysis and the pressure profile the compressor regulation and adjustment should be optimized. Modern compressor operation systems help to minimize the idle times. (During idle times, the compressor takes up about 30 % of the full load energy, however, it does not release any air)**
- **Reduce the input temperature (a temperature reduction by about 10 °C can save 3% of the energy).**
- **Optimize the pipe system by avoiding unnecessary pressure drops.**

DP 500/510 - Mobile dew point meters with data logger

Applications:

- Compressed air: Examination of refrigeration, membrane, adsorption dryers
- Technical gases: Residual moisture measurement in gases such as N2, O2 etc.
- Plastics industry: Examination of granulate dryers

Special features:

- **NEW:** Optional with integrated pressure sensor
- Precise dew point measurement down to -80 °Ctd
- Quick response time
- Integrated data logger for storage of the measured values
- USB interface for reading out via USB stick
- Calculates all necessary moisture parameters like g/m³, mg/m³, ppm V/V, g/kg, °Ctdatm
- 2nd freely assignable sensor input for third-party sensors (only DP 510)
- International: up to 8 languages selectable

Transfer of data to the PC via USB stick

2nd freely assignable sensor input for third-party sensors (only DP 510)

Quick installation by means of measuring chamber and quick coupling

Ideal for service technicians - everything in one case

Dry container - for sensor protection and quick adaption time

Flow probe **VA 500**

Dew point sensor **FA 510**

Pressure sensor

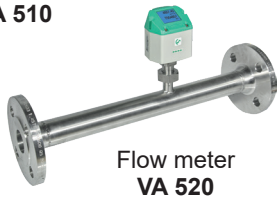

Clamp-on ammeter

Screw-in temperature probe Pt **100**

Cable temperature sensor **Pt 100**

Flow meter **VA 520**

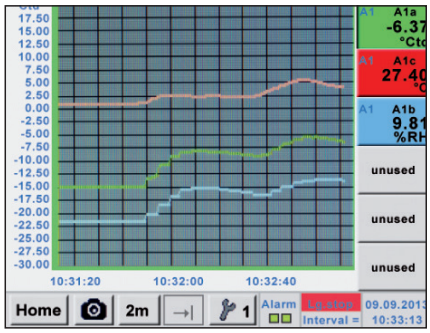

Current/effective power meters

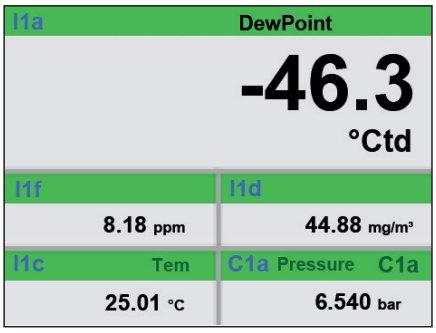

Third-party sensors
0-1/10 V
(0) 4...20 mA Pulse
Modbus/RS 485

The whole range of suitable sensors can be found on pages 38 to 41

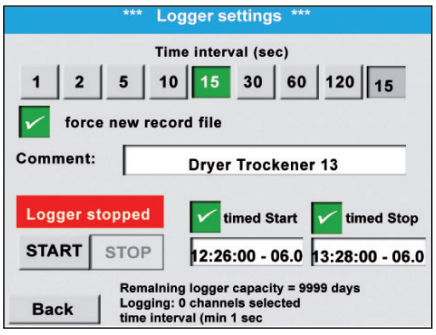

Everything at a glance

measurement curves are displayed graphically, so the operator sees at a glance the behavior of the dryer since the start of the measurement.

All physical parameters of the humidity measurement are calculated automatically. The DP 510 also displays the measured values of the external sensor.

Up to 100 million measured values can be stored. Each measurement can be stored with a comment, e.g. measuring site name. The time interval can be freely set.

DESCRIPTION	ORDER NO.
Set DP 500 in a case - consisting of:	**0600 0500**
- Portable dew point meter DP 500 for compressed air and gases	0560 0500
- Mobile measuring chamber up to 16 bar	0699 4490
- Diffusion-tight PTFE hose with quick coupling, length 1 m	0554 0003
- Power supply for DP 500/DP 510	0554 0009
- Control and calibration set 11.3% RH	0554 0002
- Quick-lock coupling	0530 1101
- Dry container for CS dew point sensors	0699 2500
- Transportation case (small) for DP 500	0554 6500
Set DP 510 in a case - consisting of:	**0600 0510**
- Mobile dew point meter DP 510 with one additional input for external sensors	0560 0510
- Mobile measuring chamber up to 16 bar	0699 4490
- Diffusion-tight PTFE hose with quick coupling, length 1 m	0554 0003
- Power supply for DP 500/DP 510	0554 0009
- Control and calibration set 11.3% RH	0554 0002
- Quick-lock coupling	0530 1101
- Dry container for CS dew point sensors	0699 2500
- Transportation case (large) for DP 510 as well as other sensors	0554 6510
Furter options, not included in the set:	
Option: Integrated pressure sensor 0...30 bar (g)	Z699 0521
Option: „Mathematics calculation function“ for 4 freely selectable channels, (virtual channels): addition,subtraction, division, multiplication	Z500 5107
Option: „Totaliser function for analogue signals“	Z500 5106
CS Basic – data evaluation graphically and in table form - reading of the measured data via USB or Ethernet, licence for 2 workstations	0554 8040
Precision calibration at -40 °Ctd or 3 °Ctd with ISO certificate	0699 3396
Additional calibration point freely selectable in the range between -80...+20 °Ctd	0700 7710
High pressure measuring chamber up to 350 bar	0699 3590
Measuring chamber for atmospheric dew point	0699 3690
Measuring chamber for granulate dryers with minimum overpressure	0699 3490
Portable dew point meter DP 510 for compressed air and gases (high pressure version up to 350 bar)	0560 0512
Portable dew point meter DP 500 for compressed air and gases (high pressure version up to 350 bar)	0560 0501

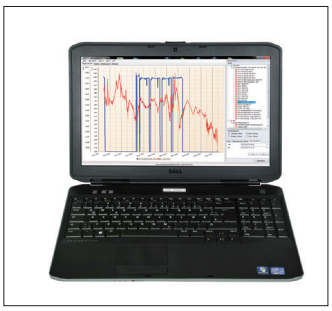

Photo key saves current screen as an image file. No additional software necessary.

TECHNICAL DATA DP 500/510	
Display:	3.5" touch screen

DP 400 mobile - With integrated dew point and pressure measurement

For measurement of all humidity parameters under pressure up to 16 bar

The DP 400 mobile with integrated, rechargeable battery has been developed especially for field use. In addition to a highly precise dew point sensor, a precise pressure sensor is also installed in the device up to 16 bar. So in addition to the pressure dew point in °Ctd, the temperature in °C and the line pressure in bar, further moisture parameters (% RH, mg/m³, g/m³) as well as pressure-dependent measured values (g/kg, ppm v/v, atm. dew point °C) can also be calculated.

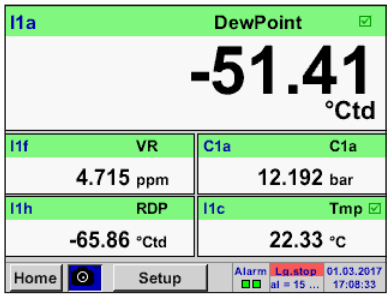

SPECIAL FEATURES:

- Precise dew point measurement down to -80 °Ctd, ppm V/V, atmospheric dew point
- Robust service case for field use
- Integrated pressure measurement up to 16 bar
- Integrated measuring chamber with integrated dry container protects the dew point sensor during transport and guarantees quick adaption time
- Humidity sensor with long-term stability: precise, condensation-resistant, quick adaption time
- Optional: 2 further sensor inputs for external sensors
- Optional: Integrated data logger

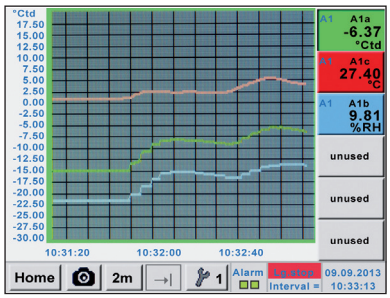

Easy operation via touchscreen

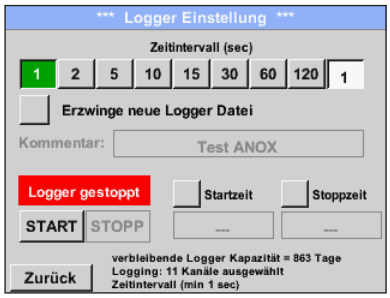

Actual measured values

All measured values can be seen at a glance.
Threshold value exceedances are indicated in red color. Thanks to the integrated pressure sensor, DP 400 mobile is able to calculate the atmospheric dew point.

Graphic view

In the graphic view all measured values are indicated as curves. It is possible to browse back on the time axis by a slide of the finger (without data logger maximum 24 h, with data logger back to the start of the measurement).

Data logger

Measured values are stored in DP 400 by means of the option „integrated data logger“.
The time interval can be freely set. Furthermore there is the possibility to fix the starting time and the end time of the data recording.
Read-out of the measured data via USB interface or via the optional Ethernet interface.

DESCRIPTION	ORDER NO.
DP 400 mobile - Portable dew point meter with integrated pressure measurement, incl. transportation bag for PTFE hose and power supply	0500 4505
Option: Integrated data logger for 100 million measured values	Z500 4002
Option: Integrated Ethernet and RS 485 interface	Z500 4004
Option: Integrated webserver	Z500 4005
Option: “Mathematics calculation function” for 4 freely selectable channels, (virtual channels): addition, subtraction, division, multiplication	Z500 4007
Option: 2 additional sensor inputs for external sensors (1 x digital sensor Modbus, 1 x analogueue sensor)	Z500 4001

FA 510/515 - Dew point sensor for residual moisture measurement in compressed air and gases

Typical applications:

- Dew point measurement in the compressed air after adsorption dryer, membrane dryer, refrigeration dryer
- Residual moisture/dew point measurement in gases such as oxygen, nitrogen, argon...
- Residual moisture/dew point measurement after granulate dryers in the plastics industry
- Easy integration of dew point measurement in front of machines and systems through IO-Link interface

Special features:

- Extremely stable in the long term
- Condensation-resistant
- Quick adaption time
- Optional with integrated pressure sensor

Recommendation:

Mounting with standard measuring chamber for compressed air up to 16 bar

Advantage: Easy installation via quick coupling increases service life and accelerates response time.

DESCRIPTION	ORDER NO.
FA 510 dew point sensor for adsorption dryers -80...20 °Ctd incl. factory certificate, 4…20 mA analogue output (3-wire connection) and Modbus-RTU interface	0699 0510
FA 515 dew point sensor for adsorption dryers -80°...20 °Ctd incl. factory certificate, 4…20 mA analogue output (2-wire connection)	0699 0515
FA 510 dew point sensor for refrigeration dryer -20...50 °Ctd incl. factory certificate, 4…20 mA analogue output (3-wire connection) and Modbus-RTU interface	0699 0512
FA 515 dew point sensor for refrigeration dryer -20...50 °Ctd incl. factory certificate, 4…20 mA analogue output (2-wire connection)	0699 0517
Connection cables:	
Connection cable for VA/FA series, 5 m	0553 0104
Connection cable for VA/FA sensors, 10 m	0553 0105
Further accessories:	
Standard measuring chamber up to 16 bar	0699 3390
Standard measuring chamber up to 16 bar, 1/2“ NPT male thread	0699 3393
High pressure measuring chamber up to 350 bar	0699 3590

Sensor protection cap	
D1	Stainless steel sintered cap (~ 50 µm)
D2	perforated stainless steel cap

Connection thread	
E1	G1/2“
E2	UNF 5/8“
E3	NPT 1/2“
E4	NPT 3/8“

Maximum pressure	
F1	50 bar
F2	350 bar
F3	500 bar
F4	30 bar (only with Y2)

Surface conditon	
G1	standard version
G2	special cleaning - oil and grease free (e.g. for oxygen applications and so on)
G3	Silicone-free version including special cleaning oil- and grease-free

Connector	
I1	M12 plug (straight)
I2	M12 plug 90° angled
I3	Adapter plug Michell Easidew valve plug DIN 43650 Form C 8 mm (only for FA 515)

Pressure measurement	
Y1	without pressure sensor
Y2	with integrated pressure sensor 0...30 bar (g), Output only via digital interfaces (only with F4, not with E2 and E4), usable for compressed air, nitrogen and argon

DS 52 - Dew point monitoring

The dew point set is wired ready to plug in at the factory. The alarm values can be set freely. The dew point sensor FA 510 is extremely long-term stable and can be quickly and easily installed and removed under pressure via the screw-on measuring chamber incl. Quick coupling.

Option:
Alarm unit (Buzzer and continuous red light)

Consisting of:
Digital process meter DS 52

Special features:

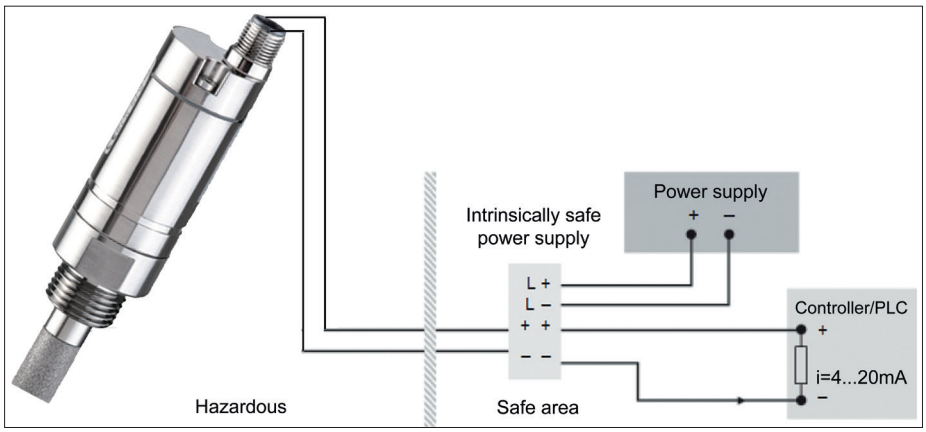

- Plug-in system: everything wired and ready
- No time-consuming studying of the instruction manual
- 2 alarm contacts (250 VAC, 3 A) pre- and main alarm freely adjustable
- 4...20 mA analogue output
- Option alarm unit: Buzzer and continuous red light

DESCRIPTION	ORDER NO.
Dew point monitoring DS 52 for adsorption dryer consisting of:	**0600 5100**
DS 52 LED process display in the wall housing	0500 0009
FA 510 dew point sensor for adsorption dryers -80 °...20 °Ctd incl. factory certificate, 4…20 mA analogue output (3-wire connection) and Modbus-RTU interface	0699 0510

FA 510 dew point sensor for refrigeration dryer -20...50 °Ctd incl. factory certificate, 4…20 mA analogue output (3-wire connection) and Modbus-RTU interface	0699 0512
Standard measuring chamber up to 16 bar	0699 3390
Connection cable for VA/FA series, 5 m	0553 0104
Options:	
Power supply 24 VDC (instead of 230 VAC)	Z500 0001
Power supply 110 VAC (instead of 230 VAC)	Z500 0002
Alarm unit mounted to the wall housing	Z500 0003
Alarm unit for external mounting with 5 m cable	Z500 0004
Further accessories:	
Precision calibration at -40 °Ctd incl. ISO certificate	0699 3396
Additional calibration point freely selectable	0700 7710

TECHNICAL DATA DISPLAY DS 52	
Dimensions:	118 x 92 x 93 mm
Display:	LED red, 7-segment, height: 13 mm, 5-digit, 2 LED for alarm relay
Keypad:	4 keys
Input:	4…20 mA
Power supply:	230 VAC, 50/60 Hz; option: 24 VDC or 110 VAC 50/60 Hz
Alarm outputs:	2 x relay output, changeover contact, 250 VAC, max. 3 A
Operating temperature:	-10…+60 °C (storage temperature -20 °C…+80 °C)
Alarm thresholds:	Freely adjustable
Hysteresis:	2 °Ctd
Analogue output:	4…20 mA = -80… 20 Ctd or -20…50 Ctd.

FA 515 Ex Dew point sensor - For residual moisture measurement in potentially explosive atmospheres

The FA 515 Ex measures dew point or pressure dew point in potentially explosive atmospheres and can be used in many nonaggressive gases.

Typical applications:

- Air/Compressed air
- Argon
- Nitrogen
- Biogas
- Natural gas
- Hydrogen
- etc…

Special features:

- Robust design
- Pressure-tight up to 500 bar
- Humidity sensor with long-term stability, tried-and-tested for years
- 4...20 mA analogue output in 2-wire technology
- **NEW**: Higher resolution of sensor signal due to the improved evaluation electronics

Approvals:

ATEX II 2G Ex ib IIC T4 Gb	Zone 1, gas, intrinsically safe, temp. 135 °C
ATEX II 2D Ex ib IIIC T80°C Db	Zone 21, dust, intrinsically safe, temp. 80 °C

FA 515 Ex may only be used in connection with approved Ex-rated power supplies or safety barriers or galvanic separating elements with max.:
Ui = 28 V max.
Ii = 95 mA max.
Pi = 0.65 W max.

DESCRIPTION	ORDER NO.

FA 515_ATEX_V.02

FA 550 dew point sensor -
In robust die-cast aluminium housing

The FA 550 is ideal for outdoor dew point measurements or rougher industrial environment

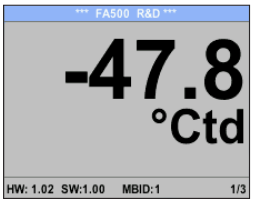

Special features:

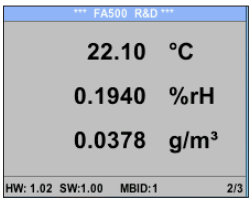

- Robust, waterproof die-cast aluminium housing, IP 67
- Alarm relay - limit value adjustable via buttons (max 60 VDC, 0.5 A)
- 4...20 mA analogue output
- Optional: 2 pieces 4 ... 20 mA analogue output e.g. for dew point and temperature
- Extremely stable in the long term
- Quick adaption time
- Pressure-resistant up to 500 bar (optional)
- **NEW**: Modbus-RTU interface
- **NEW**: Ethernet interface (optional)
- **NEW**: Higher resolution of sensor signal due to the improved evaluation electronics
- **NEW**: Sensor diagnosis on site with a portable device or CS Service Software
- **Readable via Modbus:** pressure dew point [° Ctd.], temperature [° C], rel. humidity [% RH], abs. humidity [g/m³], degree of humidity [g/kg], moisture content V/V [ppmV/V], partial vapour pressure [hPa], atmospheric dew point [° Ctd.atm]

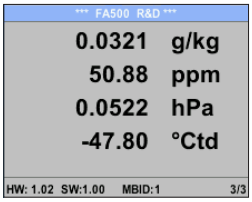

APPLICATON:

- Dew point measurement in the compressed air after adsorption dryers/membrane dryers and refrigeration dryers
- Residual moisture measurement / dew point measurement in gases such as: oxygen, nitrogen, argon, hydrogen, natural gas, biogas ...

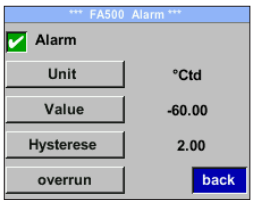

Easy operation via the keys on the display

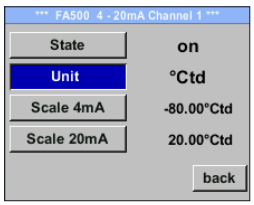

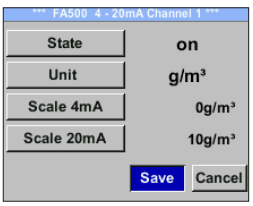

The integrated display shows the dew point in big figures as well as further humidity parameters on two more display pages. The arrow key can be used to scroll between the display pages.

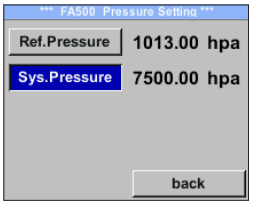

The alarm threshold value for the integrated relay can be freely entered via the keys. In addition to the alarm threshold, the hysteresis can also be freely entered.

The 4…20 mA analogue output can be scaled freely or also allocated to one further parameter, e. g. g/m³.

After entering the system pressure of the compressed air system and the reference pressure (atmospheric pressure), the sensor can also calculate back to the atmospheric dew point from the measured pressure dew point if desired.

Example order code FA 550: 0699 0550_A1_B1_C1_D1_E1_F1_G1_H1_I1

Measuring range	
A1	-80…+20 °Ctd. (-112 to 68 °F)
A2	-20…+50 °Ctd. (-4 to 122 °F)
A3	-40…+30 °Ctd. (-40 to 86 °F)
A4	-60…+30 °Ctd. (-76 to 86 °F)
A5	-80…+20 °Ctd. (-112 to 68 °F) (scaling 4…20 mA = -100…+20 °Ctd.)
A6	-80…+20 °Ctd. (-112 to 68 °F) (scaling 4…20 mA = -110…+20 °Ctd.)

Display option	
B1	with integrated display
B2	without display

Option Signal output / Bus connection	
C1	2 x 4 ... 20 mA analogue output (electrically isolated), alarm relay, RS 485 (Modbus-RTU)
C4	1 x 4 ... 20 mA analogue output (not electrically isolated), alarm relay, RS 485 (Modbus-RTU)
C5	Ethernet interface (Modbus / TCP), 1 x 4 ... 20 mA analogue output (not electrically isolated), alarm relay, RS 485 (Modbus-RTU)
C8	M-Bus
C9	Ethernet interface PoE (Power over Ethernet) Modbus / TCP), 1 x 4 ... 20 mA analogue output (not electrically isolated), alarm relay, RS 485 (Modbus-RTU)

Special version analogue output	
D1	No special version
D2	Special version 2…10 V

Scaling analogue output	
E1	Standard scaling
E2	Special scaling 4…20 mA = 0…x g/m³, ppm, g/kg etc.

Sensor protection cap	
F1	Stainless steel sintered cap (~ 50 µm)
F2	perforated stainless steel cap

Connection thread	
G1	G 1/2″
G2	UNF 5/8"
G3	1/2” NPT

Maximum pressure	
H1	50 bar
H2	350 bar
H3	500 bar

Surface conditon	
I1	standard version
I2	special cleaning - oil and grease free (e.g. for oxygen applications and so on)
I3	Silicone-free version including special cleaning oil- and grease-free

DESCRIPTION	ORDER NO.
FA 550 Dew point sensor in robust die-cast aluminum housing	0699 0550
Further accessories:	
Standard measuring chamber up to 16 bar	0699 3390
High pressure measuring chamber for compressed air up to 350 bar	0699 3590
Stainless steel bypass measuring chamber for dew point measurement in gases under pressure	0699 3290
Connection cables:	
Connection cable for probes 5 m with open ends	0553 0108
Connection cable for probes 10 m with open ends	0553 0109
Ethernet connection cable length 5 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2503
Ethernet connection cable length 10 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2504
Power supply in wall housing for max. 2 sensors VA / FA series 5xx, 100-240 VAC, 23 VA, 50-60 Hz / 24 VDC, 0.35 A	0554 0110
CS Service Software VA 550 incl. interface cable to PC (USB) and power supply - for configuration / parametrisation VA 550/570	0554 2007
PNG cable screwing - for FA 550, VA 550/570	0553 0552
Calibration and adjustment:	
Precision calibration at -40 °Ctd or 3 °Ctd incl. ISO certificate	0699 3396
Additional calibration point freely selectable	0700 7710

TECHNICAL DATA FA 550	
Measuring range:	-80…20 °Ctd, -60…30 °Ctd, -20…50 °Ctd, or 0…100% RH
Accuracy:	± 1 °C at +50…-20 °Ctd ± 2 °C at -20…-50 °Ctd ± 3 °C at -50…-80 °Ctd
Pressure range:	-1…50 bar, Special version up to 350 bar or 500 bar
Power supply:	24 VDC (10…36 VDC)
Protection class:	IP 67
EMC:	In acc. with DIN EN 61326-1
Operating temperature:	-20…50 °C
Outputs:	**Standard:** Modbus-RTU, 4…20 mA active (not electrically isolated), alarm relay (max. 48 VDC, 0.5 A) **Options:** See order code
Burden:	< 500 Ω
Material:	Die-cast aluminum housing
Screw-in thread:	Stainless steel 1.4404: G 1/2″, optional: UNF 5/8”, NPT 1/2”

FA 500 - Dew point sensor from -80 to 20 °Ctd

FA 500 is the ideal dew point measuring instrument with integrated display and alarm relay for refrigeration, membrane and adsorption dryers.

Special features:

- **NEW**: Optional with integrated pressure sensor
- Integrated display
- Threshold value adjustable via keypad, alarm relay (max. 60 VDC, 0.5 A)
- Pressure-tight up to 500 bar (special version)
- Extremely stable in the long term
- Quick adaption time
- 4...20 mA analogue output for dew point
- Different refrigeration and adsorption dryer versions
- Modbus-RTU interface

Readable via Modbus:

- Pressure dew point [°Ctd.]
- Temperature [°C]
- Rel. humidity [% RH]
- Abs. humidity [g/m³]
- Degree of humidity [g/m³]
- Moisture content V/V [ppmV/V]
- Water vapour partial pressure [hPa]
- Atmospheric dew point [°Ctd.atm]

The integrated keys enable simple, menu-controlled operation

Upper connection:
Power supply, 4…20 mA output, Modbus-RTU output

Lower connection:
Alarm relay

Option: Ethernet interface (PoE)

Easy operation via the keys on the display

The integrated display shows the dew point in big figures as well as further humidity parameters on two more display pages. The arrow key can be used to scroll between the display pages.

The alarm threshold value for the integrated relay can be freely entered via the keys. In addition to the alarm threshold, the hysteresis can also be freely entered.

The 4…20 mA analogue output can be scaled freely or also allocated to one further parameter, e. g. g/m³.

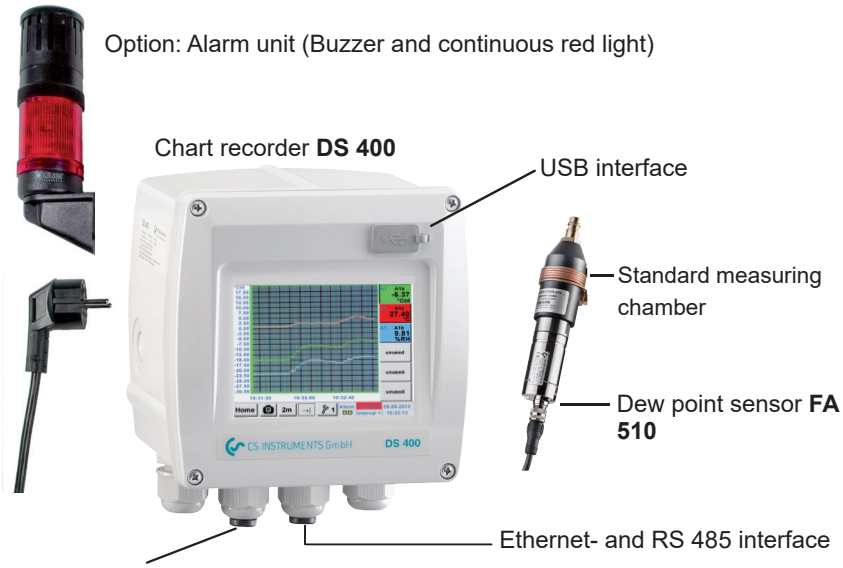

After entering the system pressure of the compressed air system and the reference pressure (atmospheric pressure), the sensor can also calculate back to the atmospheric dew point from the measured pressure dew point if desired.

DESCRIPTION	ORDER NO.
FA 500 dew point sensor for refrigeration dryers, -20...50 °Ctd	0699 0501
FA 500 dew point sensor for adsorption dryers, -80…20 °Ctd	0699 0502
FA 500 dew point sensor for adsorption dryers, -60...30 °Ctd	0699 0503
Connection cables:	
Connection cable for VA/FA series, 5 m	0553 0104
Connection cable for VA/FA sensors, 10 m	0553 0105
Cable for alarm/pulse output, with M12 plug, length 5 m	0553 0106
Cable for alarm/pulse output, with M12 plug, length 10 m	0553 0107
Ethernet connection cable length 5 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2503
Ethernet connection cable length 10 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2504
Options for FA 500:	
Option: Integrated pressur sensor 0...30 bar (g)	Z699 0522
Option: Integrated pressur sensor 10...2000 bar (abs)	Z699 0523
Option: Max. pressure FA5xx 350 bar	Z699 0515
Option: Max. pressure FA5xx 500 bar	Z699 0516
Option: Special scaling FA5xx 4…20 mA=__ … __ g/m³, ppm etc.	Z699 0514
Option: connection thread FA5xx, 5/8" UNF	Z699 0511
Option: surface condition FA 5xx, free of oil & grease	Z699 0517
Ethernet-Interface for VA 500/520 and FA 500	Z695 5006
Ethernet-Interface PoE for VA 500/520 and FA 500	Z695 5007
M-Bus board for VA 500/520 and FA 500	Z695 5004
Further accessories:	
Standard measuring chamber for compressed air up to 16 bar	0699 3390
High pressure measuring chamber up to 350 bar	0699 3590
CS Service Software for FA/VA sensors incl. PC connection set, USB connection and interface adapter to the sensor	0554 2007
Mains unit in wall housing for maximum 2 sensors of the series VA/FA 5xx, 100-240 V, 23 VA, 50-60 Hz / 24 VDC, 0.35 A	0554 0110
AC adapter plug 100-240 VAC / 24 VDC for VA/FA 5xx	0554 0109
Calibration and adjustment:	
Precision calibration at -40 °Ctd or +3 °Ctd incl. ISO certificate	0699 3396

TECHNICAL DATA FA 500	
Measuring range:	-80…20 °Ctd, -60…30 °Ctd, -20…50 °Ctd, or 0…100% RH
Accuracy:	± 1 °C at +50…-20 °Ctd ± 2 °C at -20…-50 °Ctd ± 3 °C at -50…-80 °Ctd
Pressure range:	-1…50 bar Special version up to 500 bar
Power supply:	24 VDC (10…36 VDC)
Protection class:	IP 65
EMC:	In acc. with DIN EN 61326-1
Operating temperature:	-20…50 °C
Connection:	2 x M12, 5-pin for analogue output, Modbus-RTU and alarm output, M-Bus (optional) Ethernet (PoE) (optional)
PC connection:	Modbus-RTU interface (RS 485)
Output: (3-wire)	4…20 mA = -80…20 °Ctd 4…20 mA = -60…30 °Ctd 4…20 mA = -20…50 °Ctd
Burden for analogue output:	< 500 Ω
Alarm relay:	NC, max. 60 VDC, 0.5 A
Screw-in thread:	Stainless steel 1.4404: G 1/2", optional: UNF 5/8", NPT 1/2"
Dimensions housing:	76.5 x 85 x 75 mm (WxHxD)

DS 400 Dew point monitoring

For stationary dew point monitoring of refrigeration or adsorption dryers. The touch screen graphic display enables an intuitive operation and graphically shows the progress of the measured values. Two alarm relays are available for monitoring threshold values. Available interfaces are either a classic analogue output 4...20 mA or optionally digital interfaces such as Ethernet and RS 485 (Modbus protocol). As a stand-alone solution, the measured values stored in the optional data logger can be read-out via USB stick and evaluated on the computer by means of the software CS Basic.

SPECIAL FEATURES:

- 3.5" Graphic display – easy to use with touchscreen
- Plug-in system: everything wired and ready
- 2 alarm contacts (230 VAC, 3 A), pre-alarm and main alarm freely adjustable
- An alarm delay can be set for each alarm relay.
- 4...20 mA analogue output
- Option: Ethernet and RS 485 interface (Modbus protocole)
- Option: Web server

Transfer of data to the PC via USB stick

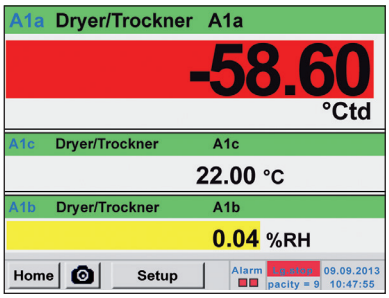

- **Option**: Integrated data logger
- Record dew point curve up to 100 million measured values
- CS Basic for evaluation in graphs and tables. Read out data either via USB stick or Ethernet

DESCRIPTION	ORDER NO.
Dew point monitoring DS 400 for adsorption dryers (-80…+20 °Ctd)	0601 0510
Dew point monitoring DS 400 for refrigeration dryers (-20…+50 °Ctd)	0601 0512
Options:	
Option: Integrated data logger for 100 million measured values	Z500 4002
Option: Integrated Ethernet and RS 485 interface	Z500 4004
Option: Integrated webserver	Z500 4005
Option: 2 additional sensor inputs for analogueue sensors (pressure sensors, temperature sensors etc.)	Z500 4001
Further accessories	
CS Basic – data evaluation graphically and in table form - reading of the measured data via USB or Ethernet, licence for 2 workstations	0554 8040
Alarm unit mounted to the wall housing	Z500 0003
Alarm unit for external mounting with 5 m cable	Z500 0004
Calibration and adjustment	
Precision calibration at -40 °Ctd or +3 °Ctd incl. ISO certificate	0699 3396

TECHNICAL DS 400	
Dimensions:	118 x 115 x 98 mm IP 54 (wall housing) 92 x 92 x 75 mm (panel mounting)
Inputs:	2 digital inputs for FA 510 or VA 500/520
Interface:	USB interface
Power supply:	100…240 VAC, 50-60 Hz
Accuracy:	See FA 510
Alarm outputs:	2 relays, (pot.-free)
Options:	
Data logger:	100 million measured values start/stop time, measuring rate freely adjustable
2 additional sensor inputs:	For connection of pressure sensors, temperature sensors, clamp-on ammeters, third-party sensors with 4...20 mA, 0 to 10 V, Pt 100, Pt 1000

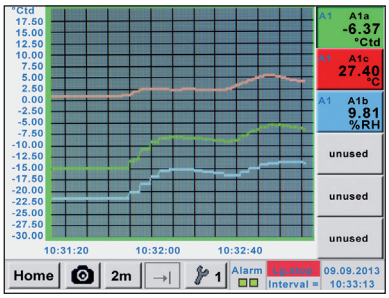

TECHNICAL DATA FA 510	
Measuring range:	-80…20 °Ctd or -20…50 °Ctd
Accuracy:	± 1 °C at 50…-20 °Ctd ± 2 °C at -20…-50 °Ctd ± 3 °C at -50…-80 °Ctd
Pressure range:	-1…50 bar, special version 350 bar

Easy operation via touchscreen

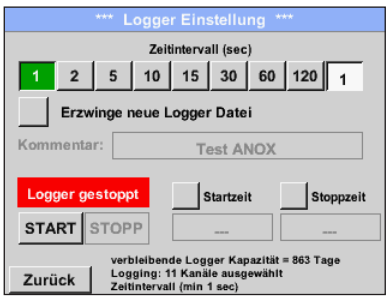

Actual measured values

All measured values can be seen at a glance. Threshold value exceedances are indicated in red color. A „measuring site name“ can be allocated to each sensor.

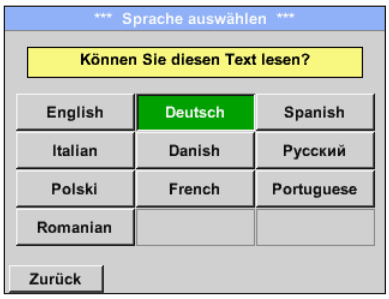

Graphic view

In the graphic view all measured values are indicated as curves. It is possible to browse back on the time axis by a slide of the finger (without data logger maximum 24 h, with data logger back to the start of the measurement).

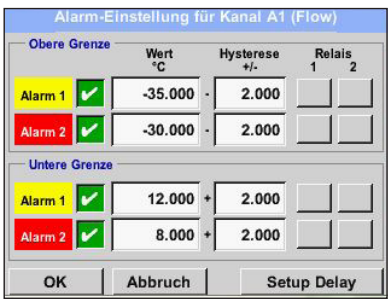

Data logger

Measured values are stored in DS 400 by means of the option „integrated data logger“.
The time interval can be freely set. Furthermore there is the possibility to fix the starting time and the end time of the data recording.
Read-out of the measured data via USB interface or via the optional Ethernet interface.

Selection of the language

DS 400 „speaks“ several languages. The desired language can be selected via the selection button.

Adjustment of the alarm relays

Each one of the two alarm relays can be allocated individually to a connected sensor. The alarm thresholds and the hysteresis can be freely adjusted.
New: It is possible to set an alarm delay for each alarm relay so that the relay is only triggered after that period of time.

Accessories FA 500/510/515

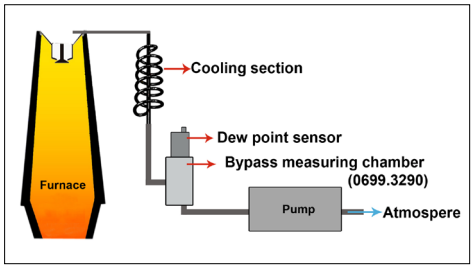

DESCRIPTION	ORDER NO.
Diffusion-tight PTFE hose 6 mm with quick-lock coupling length 1 m	0554 0003
Diffusion-tight PTFE hose 6 mm, length 1 m	0554 0008

DESCRIPTION	ORDER NO.
Cooling section made of stainless steel	0699 3291

- 8 mm stainless steel tube wound as a spiral.
- With the cooling section, process gases from ovens etc. can be cooled from high temperatures to a sensor-compatible temperature of about 50°C. Falling below the dew point to be avoided.

DESCRIPTION	ORDER NO.
Suction pump max. 0.9 l/min, 200 mbar for DP 510	0554 6520

DESCRIPTION	ORDER NO.
Quick-lock coupling NW 7,2 - G 1/2″ male thread	0530 1101

DESCRIPTION	ORDER NO.
Control and calibration set 11.3% RH	0554 0002
Control and calibration set 33% RH	0554 0004
Control and calibration set 75.3% RH	0554 0005

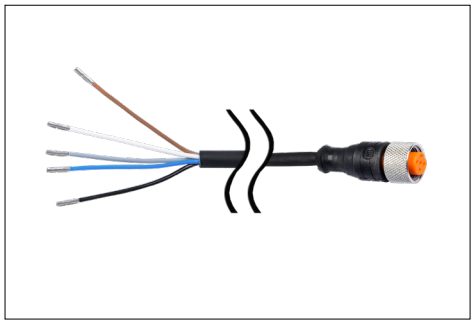

- Control and calibration sets provide a defined humidity over a saturated saline solution
- The control and calibration set is screwed onto the dew point sensor and thus enables a simple and inexpensive control and calibration option down to -20 °Ctd dew point on site

Accessories FA 500/510/515

DESCRIPTION	ORDER NO.
Dry container for CS dew point sensors	0699 2500

- Guarantees sensor protection and quick adaption time. Recommended for storage of mobile sensors

DESCRIPTION	ORDER NO.
Connection cable for VA/FA series, 5 m	0553 0104
Connection cable for VA/FA sensors, 10 m	0553 0105
Connection cable for VA/FA series, 20 m	0553 0120
Connection cable for VA/FA series, 5 m shielded	0553 0129
Connection cable for VA/FA series, 10 m shielded	0553 0130
Cable for alarm/pulse output, with M12 plug, 5 m	0553 0106
Cable for alarm/pulse output, with M12 plug, 10 m	0553 0107

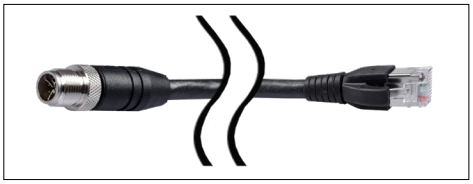

DESCRIPTION	ORDER NO.
M12 plug for FA 500/510/515	0 2000 0082
M12 plug 90° angled	0219 0060

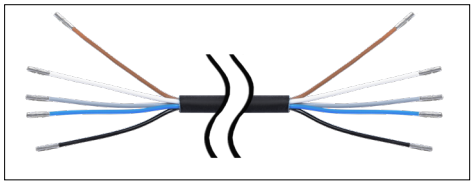

DESCRIPTION	ORDER NO.
Adapter plug FA 515/Michell easidew valve connector DIN 43650 form C 8 mm	0 2000 1389

DESCRIPTION	ORDER NO.
Ethernet connection cable length 5 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2503
Ethernet connection cable length 10 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2504
Ethernet connection cable length 20 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2505

Accessories FA 550

DESCRIPTION	ORDER NO.
Connection cable 5 m with open ends	0553 0108
Connection cable 10 m with open ends	0553 0109

DESCRIPTION	ORDER NO.
PNG cable screwing - for standard	0553 0552

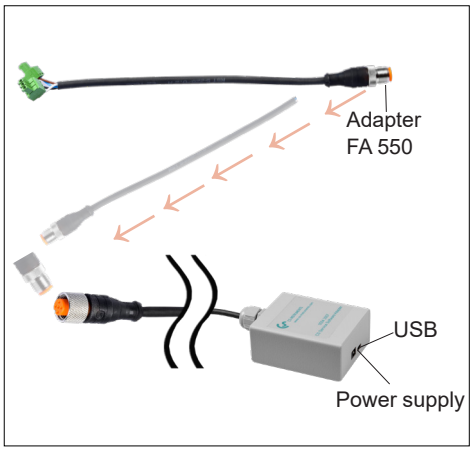

Accessories for all FA 5xx

DESCRIPTION	ORDER NO.
Mains unit in wall housing for maximum 2 sensors of the series VA/FA 5xx, 100-240 V, 23 VA, 50-60 Hz / 24 VDC, 0.35 A	0554 0110

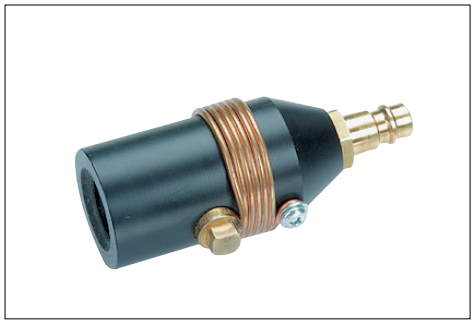

DESCRIPTION	ORDER NO.
AC adapter plug 100-240 VAC / 24 VDC for VA/FA 5xx	0554 0109

DESCRIPTION	ORDER NO.
CS Service Software incl. PC connection set, USB connection and interface adapter to the sensor	0554 2007

Measuring chambers

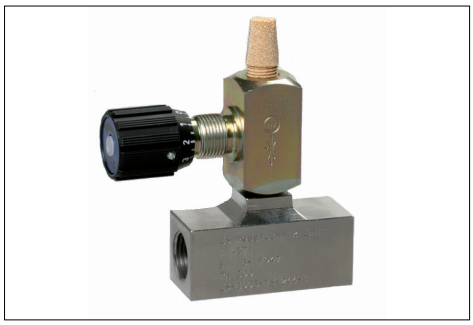

DESCRIPTION	ORDER NO.
Standard measuring chamber for compressed air	0699 3390

- Applicable for 2...16 bar
- Process connection: Plug nipple NW 7.2 (Parker series 26) or G 1/4" female thread when using without plug nipple
- Sensor connection: G 1/2" female thread
- Gives 2-3 liters / min of process air to the environment
- The copper capillary relaxes the compressed air and prevents the backflow of moisture from the ambient air into the measuring chamber

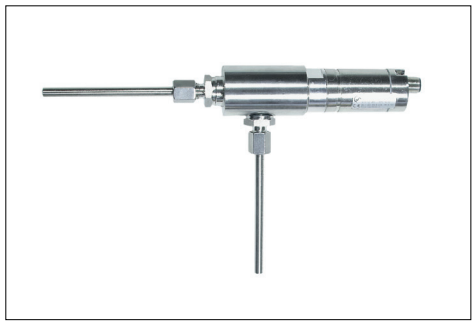

DESCRIPTION	ORDER NO.
Stainless steel measuring chamber for compressed air up to 50 bar	0699 3292

- Applicable for 2...50 bar
- Process connection: G1/4" female thread
- Sensor connection: G 1/2" female thread
- Gives 2-3 liters / min of process air to the environment

DESCRIPTION	ORDER NO.
High pressure measuring chamber for compressed air up to 350 bar	0699 3590

- Applicable for 30...350 bar
- Process connection: G 1/4" female thread
- Sensor connection: G 1/2" female thread
- Emits 2-3 litres/min of process air to the environment via a fine nozzle
- Via the high-pressure valve, the amount of air for sampling can be adjusted individually depending on the pressure level. The process air is released to the environment via the sinter filter

DESCRIPTION	ORDER NO.
Stainless steel bypass measuring chamber for dew point measurement in gases under pressure	0699 3290

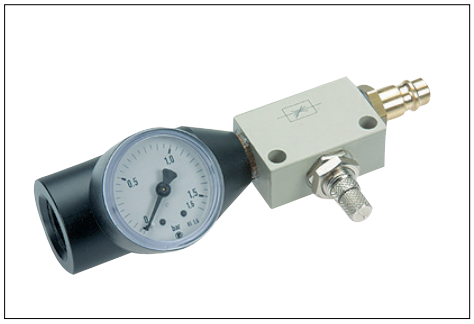

- Applicable for -1...500 bar
- Process connection: G 1/4" female thread gas inlet and G 1/4" female thread gas outlet
- Sensor connection: G 1/2" female thread
- The flow of at least 2 liters / min of gas must be ensured by the customer

DESCRIPTION	ORDER NO.
Standard measuring chamber for compressed air NPT 1/2”	0699 3393

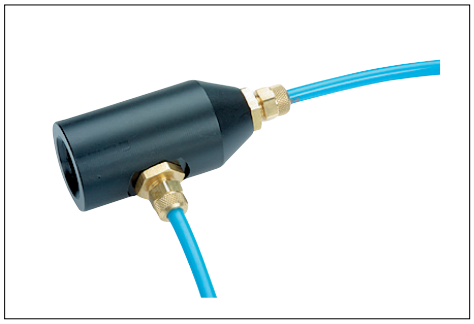

- Applicable for 2...16 bar
- Process connection: NPT 1/2” male thread, or NPT 1/4” fermal thread for use without adapter
- Sensor connection: NPT 1/2" female thread
- Gives 2-3 liters / min of process air to the environment
- The copper capillary relaxes the compressed air and prevents the backflow of moisture from the ambient air into the measuring chamber

Measuring chambers

DESCRIPTION	ORDER NO.
Measuring chamber for atmospheric dew point	0699 3690

- Applicable for 2...16 bar
- Process connection: Plug nipple NW 7.2 (Parker series 26) or G 1/4" female thread when using without plug nipple
- Sensor connection: G 1/2" female thread
- Gives 2-3 liters / min of process air to the environment
- The throttle valve in front of the measuring chamber relaxes the compressed air to atmospheric pressure in the measuring chamber. The manometer integrated in the measuring chamber indicates the overpressure to the atmosphere

DESCRIPTION	ORDER NO.
Measuring chamber for granulate dryers and gases	0699 3490

- Applicable for -1...16 bar
- Process connection: Plug connection for 6 mm hose at inlet and outlet or G 1/4" female thread when using without plug connections
- Sensor connection: G 1/2" female thread
- The flow of at least 2 liters / min of air / gas must be ensured by the customer

Notes

Calibration of dew point sensors

The calibration range for dew point sensors is from -80 °Ctd...20 °Ctd

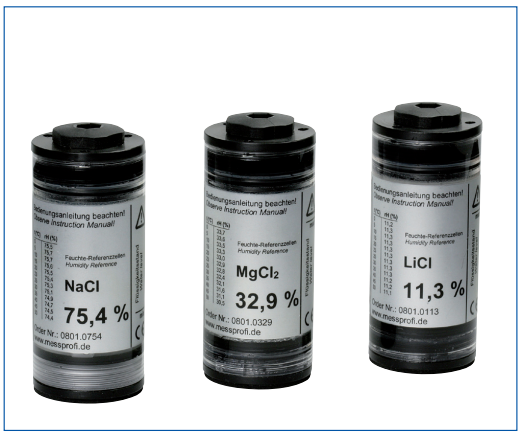

Both dew point sensors from us and from other manufacturers can be calibrated. High precision reference measuring devices with DKD or BAM certificate guarantee an accuracy of up to 0.1 °C dew point.

Special feature:
Due to the digital data transmission, only the dew point sensor has to be calibrated. The display devices remain wired on site.

Calibration range: from -80 to 20 °Ctd -
Accuracy of the DKD reference: 0.1 °Ctd

Control and calibration set

Control and calibration sets provide a defined humidity over a saturated saline solution.

The control and calibration set is screwed onto the dew point sensor and therefore enables an easy and low-priced possibility for on-site control and calibration down to -20 °C dew point.

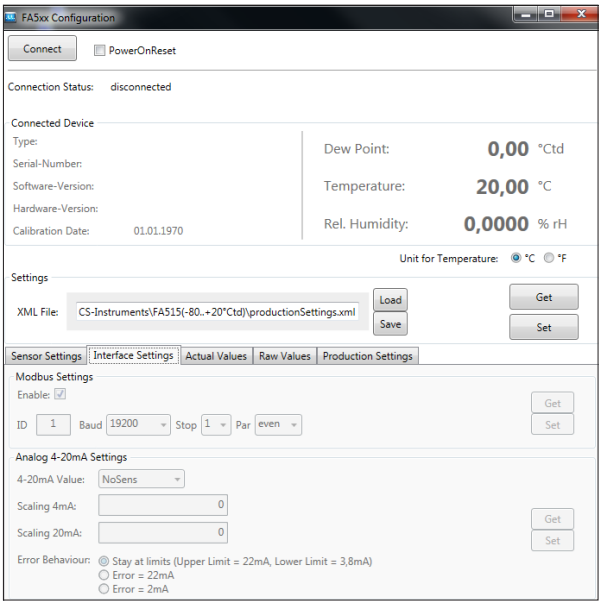

DESCRIPTION	ORDER NO.
Recalibration and precision calibration at -40 °Ctd or 3 °Ctd incl. ISO certificate	0699 3333
Precision calibration in the range -80...20 °Ctd, °Ctd points freely selectable	0700 7710
Control and calibration set 11.3% RH	0554 0002
Control and calibration set 33% RH	0554 0004
Control and calibration set 75.3% RH	0554 0005
Precision calibration at -40 °Ctd or 3 °Ctd incl. ISO certificate	0699 3396
Replacement unit for the period of re-calibration	0699 3900
Pressure dew point replacement sensor from our device pool including precision certificate at -40 °Ctd	0699 3990

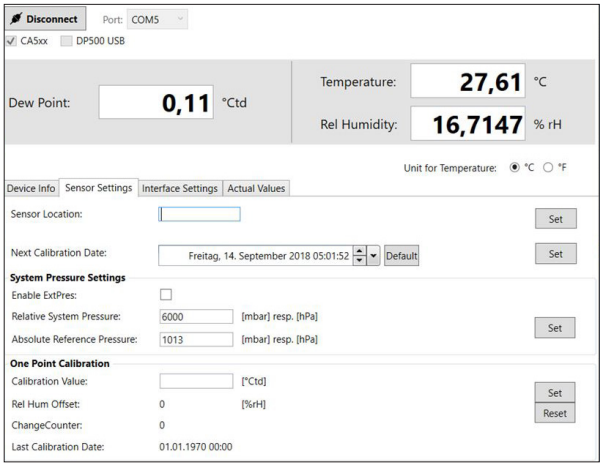

CS Service Software

With the CS service software including the USB Modbus interface adapter, the FA 510 / FA 515 / FA 500 dew point sensors can be configured via laptop / PC. The following settings can be made via CS Service Software:

- Scaling of the 4...20 mA analogue output
- Assignment of the parameter to the analogue output (e.g. 4...20 mA = 0...10 g/m³)
- Available units: °Ctd, °Ftd, g/m³, mg/m³, ppmv/v, g/kg
- Reading out the firmware version, serial number, date of the last calibration
- One-point calibration (adjustment) of the sensors in the process. This requires a reference device
- Update of the sensor software (Firmware)
- Modbus settings as Modbus-ID, Baud rate, Stopbit, Parity

DESCRIPTION	ORDER NO.
CS Service Software incl. PC connection set, USB connection and interface adapter to the sensor	0554 2007

Dew point measurement in compressed air systems

Today, compressed air is an essential and reliable source of energy from modern production processes.

Depending on the particular application, different requirements are made on the compressed air. The compliance with a specific moisture content or dew point/pressure dew point is the basic prerequisite for a permanently trouble-free system operation for every process.

Especially for moisture measurement or dew point / pressure dew point measurement in compressed air and gases, we have developed the DS 400 measuring device with many new advantages.

Usually, compressed air is generated from ambient air which must be aspirated, compressed by using pistons or screw compressors and which must then be dried more or less strongly.

The aim is to produce dry and oil-free compressed air which is low in dust particles with the smallest possible effort. Residual oil and dust particles can be removed by means of complex filter systems.
However, moisture must be reduced by means of dryers (refrigeration dryers, membrane dryers, adsorption dryers and so on) which ideally work in a controlled manner independent of any load.

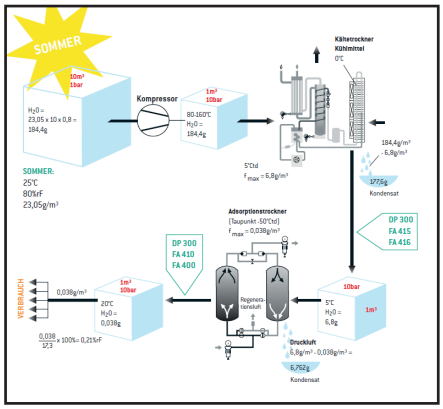

How does water get into compressed air?

Air is able to bind more water vapour the higher the temperature and the larger the volume. Conversely, if the air is compressed, the capacity to bind water vapour is reduced.

A compressor compresses atmospheric ambient air into a fraction of its original volume. At a certain point of the compression process the water content of the air exceeds the decreasing ability of the air to bind water. The air is saturated and part of the water drops out as condensate.
By means of an additional decrease of the temperature even more water will condensate.

This means that the relative humidity on the output of a compressor will always be at 100 % and that there will be additional water drops in the outgoing air.

The amount of liquid which drops out under pressure can be large. For example, a 30 kW compressor thus releases approximately 20 litres into the compressed air line at a humidity level of 60 % and an ambient temperature of 20 °C in eight hours. In case of big compressors this value will be much higher.

Effects of the moisture content

Depending on the application different demands are made on the compressed air. For each process the observance of a certain moisture content is the condition for a durably failure-free functioning of the whole system.

Most of the compressed air lines are made from steel or non zinc-coated steel. Since the corrosion speed strongly increases from a relative humidity of 50 % this value should not be exceeded in any case.

In the course of time, high moisture will lead to a corrosion in case of non zinc-coated lines. The rust gradually chips off and moves to the sampling points. This leads e. g. to blocked nozzles, defective control elements and production stops.

Expensive repairs and short maintenance intervals are inevitable. In addition to problems with corrosion and the described results the moisture content has direct influence on the quality of the final products.

Wich problems may arise in case of too high moisture?

In the following please find some of the most occurring samples:

- **Hygroscopic products (spices, sugar etc.) get stuck together during transport by the pneumatic conveyor system**
- **Bubbles are formed during painting and coating processes**
- **Boreholes can clog up from dust being carried**
- **Control valves freeze over in winter in unheated halls10610101**

Tasks of dryers

Different types of dryers are used in practice in order to control the problems of moisture levels that are too high.

In compressed air technology, the pressure dew point is the parameter for indicating the dryness of compressed air. The pressure dew point is the temperature at which the moisture which is contained in the compressed air condenses to form liquid water (also saturation, 100% relative humidity).

The lower the pressure dew point temperature, the smaller the amount of water vapour contained in the compressed air.

Refrigeration dryer for dew point parameters around +2 °Ctd.

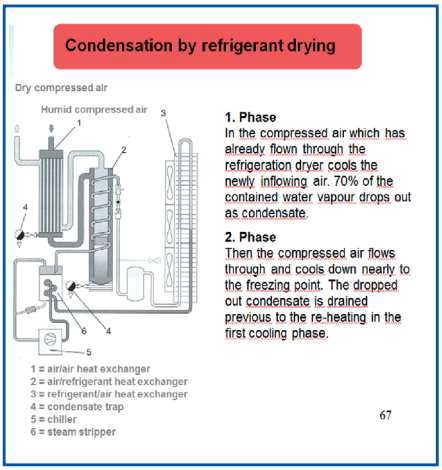

There are different types of compressed air dryers; refrigeration dryers or adsorption dryers are the most commonly used ones.

Refrigeration dryers cool down the compressed air to approx. 2 to 5 °C. In this case, the pressure dew point is also 2 to 5 °C. The excess water vapour condenses and precipitates.

After that the air is again heated up to room temperature.

The refrigeration compressed air dryers are monitored in most cases only by a display of the cooling temperature. A stationary humidity monitor is hitherto only installed in large systems or in particularly important applications.

However, the display of the cooling temperature alone is not sufficient. Even if the cooling temperature seems to be OK, the following errors can cause an excessive pressure dew point:

- **Condensate in the refrigeration dryer is not drained off (condensate drain defective resp. soiled)**
- **Compressed air bypass in the refrigeration dryer (close and corrode heat exchanger pipes and so on); compressed air bypass in bypass lines**
- **A failure of the refrigeration dryer inevitably leads to considerable problems with condensate in the compressed air line**

It is especially problematic (besides the already listed problems), if the condensate can concentrate in blind lines and does not drain off automatically. Condensate in blind lines can only be removed again by means of considerable efforts or dried and drained off by means of an extremely large amount of compressed air.

This often leads to increased dew point values at very low consumption rates, without the refrigeration dryer showing any obvious problems. In this case, it is quite difficult for the person who is responsible for compressed air to find out the reason for the increased dew point values or in extreme cases for the condensate in the long-term.

Adsorption dryers for typical dew points -30...-40 °Ctd.

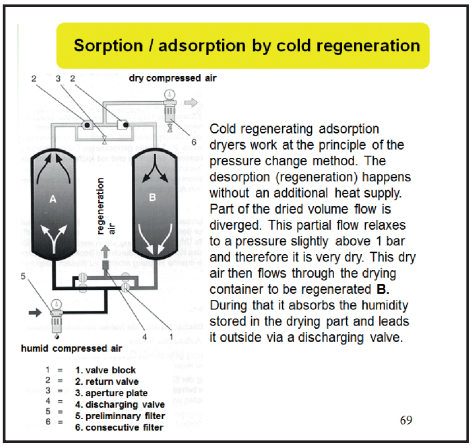

The functioning of the adsorption dryer is based on the principle of the attraction between the two masses. Water vapor is bound (absorbed) at the surface of a desiccant.

Effective adsorption dryers are able to dry compressed air down to a pressure dew point of -40 °C and lower.

Regenerative adsorption dryer exist of two tanks which are filled with desiccant. In different procedures there is one tank regenerated cold resp. warm while the other one dries the operation air.

Depending on the procedure and the operating conditions the desiccant has to be exchanged in cycles of three to five years.

Certain operating conditions lead to a shortening of the life span of the desiccant:

- **Overload on compressed air side due to excessive compressed air consumption**
- **Poor pre-separation of condensate**
- **Oily air**
- **Regeneration times of the individual tanks too long**

New: DS 400 dew point measurement with alarm ensures process reliability

Unique worldwide with 3.5" graphic display with touch screen and print function.

An alarm delay can be set for each relay. This grants that only really long-term threshold value exceedances are indicated. Additionally every alarm can be reset.

The dew point set DS 400 consists of the chart recorder DS 400 and the dew point sensor FA 510 including measuring chamber for the pressure dew point measurement of compressed air and gases up to 16/50/350 bar.

For pressures of more than 16 bar, please use the high-pressure measuring chamber.

The heart of the dew point sensor is the worldwide proven humidity sensor. In order to get quick and accurate measurements it is necessary that the humidity sensor is continuously flown by the gas (compressed air) to be measured. For this purpose a defined volume flow is blown out at a certain pressure via a capillary line.

The measuring chamber can be connected to the sampling point without any large installation efforts by means of the standard plug nipple for compressed air lines.
The big difference to customary paperless chart recorders is reflected in the simplicity of DS 400 on initiation and evaluation of the measured data.

The intuitive operation with the 3.5" touch screen graphic display with zoom function and print key is the only one of its kind in the world in this price category. By means of the graphic display with zoom function the drying procedure resp. the dew point curve can be seen at a glance and stored in the data logger. So the user can take a look at the stored measuring curves also without any computer at any time on site. This grants a quick and easy analysis of the drying behavior.

By means of the print key the actual screen can be stored as an image file to the internal SD card or to a USB stick and printed out at the computer without any additional software.

Ideal for documentation of the measured values/measurement curves on site.

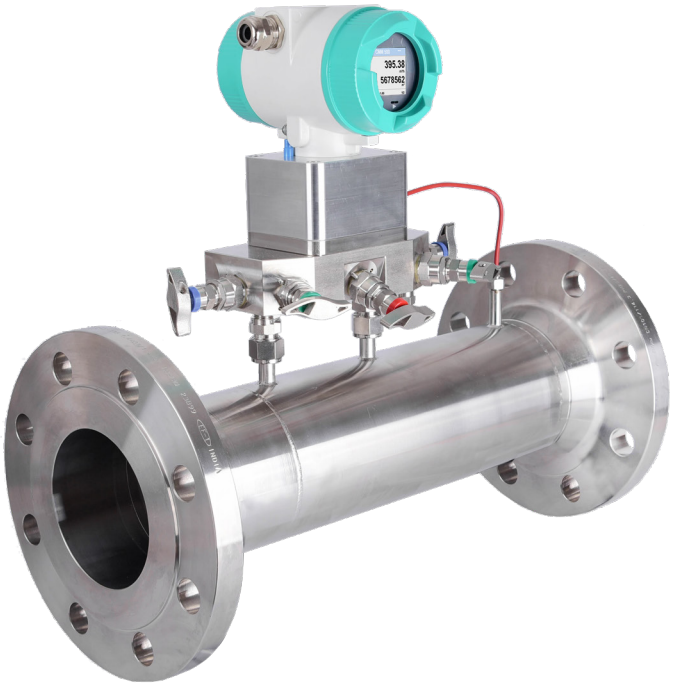

Colored measurement curves can be sent by e-mail as image files or integrated into a service report.

The internal data logger enables the storage of the measured data for several years. The measured data can be evaluated on a USB stick of via Ethernet by means of the comfortable software CS Soft Basic.

Special features:

- **3.5" graphic display, intuitive operation via touch screen**
- **Zoom function for accurate analysis of measured values**
- **Colored measurement curves with names**
- **Mathematical calculation function for calculation of the dew point distance (condensate switch)**
- **Print key: optional indications can be stored as image files directly on a USB stick and sent by e-mail without any software**
- **2 alarm contacts for threshold value exceedance**
- **Freely adjustable alarm delay for both alarm contacts with reset function**
- **Up to 4 sensor inputs for: additional dew point, pressure, temperature, flow meters, electrical effective power meters, optional third-party sensors can be connected: Pt 100/ 1000, 0/4…20 mA, 0-1/10 V, Modbus, pulse**
- **Integrated data logger 8 GB**
- **USB, Ethernet interface, RS 485 / Modbus**
- **Web server**

CMM 500 - Compressor Master Meter

Redifinining precision

The CMM 500 Compressor Master Meter is a new type of reference flow meter that has been especially developed for high-precision measurement of the volume flow of compressors and for the billing of compressed air.

The CMM 500 can be used both directly behind the compressor for measuring wet compressed air and as a compressed air meter for measuring consumption and billing of dry compressed air.

It is based on a Venturi tube that meets with all the requirements of ISO 5167-3 for dimensional accuracy and surface quality. ISO 5167 is an internationally recognized standard that provides guidelines for accurate flow measurement with differential meters. Venturi pipes are extremely reliable, easy to handle and require low maintenance.

The main advantage of a Venturi tube towards many other measuring systems is the higher differential pressure with a lower pressure loss and the shorter inlet and outlet sections.

At the same time, the low-pressure loss is a major advantage compared to many other measuring methods.

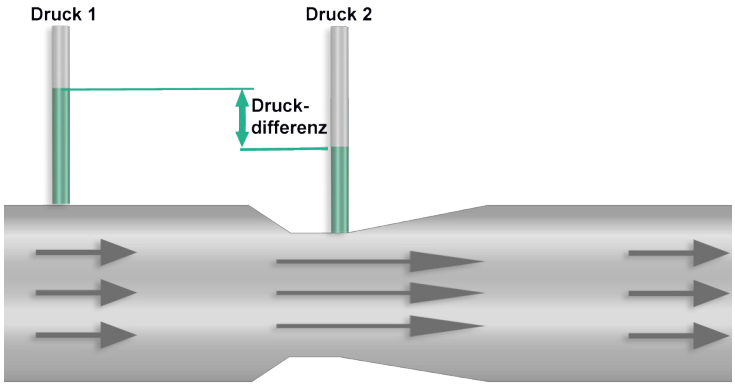

The large measuring range measuring span 1:130 and an accuracy < 0.5 % of the measured value (from 0.2 Qmax to Qmax) are unique.

The small, compact design and the use of long-term stable and highly accurate pressure sensors with stainless steel diaphragms are the basis for precise consumption and flow measurement of operating volume, standard volume, pressure, differential pressure and temperature in one measuring device.

With the help of the valve block, service or maintenance can be carried out on site at any time (zero-point correction, condensate drain, sensor replacement for calibration), even during operation under pressure.

Measurement principle

Flow measurement with the Venturi tube manufactured according to ISO 5167-3

For differential pressure measurement, two separate lines lead to a differential pressure measuring cell. One pressure connection (pressure 1) is located at the inlet of the Venturi tube and a second pressure connection is located at the outlet of the Venturi tube (pressure 2). Without flow, the pressure at the inlet and outlet is identical.

As soon as flow is present, the flow rate in the narrowing increases. At the same time, the static pressure 2 decreases. The pressure at the inlet is higher than at the outlet.

The pressure difference is a rate of the velocity and therefore also of the volume flow. The greater the flow velocity and the associated decrease in pressure in the Venturi tube, the greater the pressure difference. Two additional precision sensors (temperature and absolute pressure) are used to calculate the mass or standard volume flow in accordance with DIN 1343 or ISO 1217 compressed air standard.

The design of the Venturi tube ensures a large measuring span (1:130) with low pressure loss at the same time.

CMM 500 - Compressor Master Meter

DESCRIPTION	ORDER NO.
Accessories:	
ISO calibration certificate (5 calibration points)	3200 0001
DAkkS-certificate (5 calibration points)	on request
Intelligent chart recorder DS 500 mobile, 4 sensor inputs	0500 5012
CS PM 600 mobile current/effective power meter 100 A	0554 5341
CS PM 600 mobile current/effective power meter 600 A	0554 5342
IAC 500 sensor for measuring ambient conditions (absolute pressure, temperature, rel. humidity), incl. wall bracket	0604 1000

TECHNICAL DATA CMM 500 Compressor Master Meter	
Measuring medium:	Air, gases
Accuracy: (v. M. = from measured value): **Typically achievable** Accuracy when installing CS inlet and outlet sections:	± 1% for Qmin up to 0,2 Qmax ± 0,5% for 0,2 Qmax up to Qmax ± 0,75% for Qmin up to 0,2 Qmax ± 0,3% for 0,2 Qmax up to Qmax
Measuring principle:	Differential pressure, Venturi
Measuring range:	1:130
Response time:	t 99: < 1 sec.
Medium temperature:	-20°… +100 °C
Operating pressure:	Max. 16 bar (g), on request 30 bar / 100 bar
Ambient temperature:	-30°… +70 °C
Power supply:	18 ... 36 VDC
Signal output:	Standard: RS 485 (Modbus-RTU), 4…20 mA, pulse **Optional**: Ethernet Interface, M-Bus
Process connection:	Flange according to DIN EN 1092-1 or ANSI Flange
Installation conditions:	In horizontal lines or in risers

Inlet-/outlet section

- Inlet and outlet sections ensure calm flow conditions and highly accurate measurements
- When installing the CS inlet or outlet sections, it is ensured that there is no turbulence due to different inner diameters, edges of CMM 500 and inlet or outlet section.
- In the case of extreme disturbances and turbulences, e.g. caused by check valves, valves, partially closed ball valves, it is recommended to install a perforated plate straightener in front of the inlet section

Fields of application

- **Reference measuring device** for blower and compressor test benches (effective delivery capacity)
- **Continuous monitoring** of the volume flow of individual compressors
- **High-precision measurement** of the volume of compressed air supplied to third parties for billing purposes with DIN EN ISO/IEC 17025 certificate
- **Measurement on the „wet side“** directly downstream the compressor

The CMM 500 Compressor Master Meter is a reference flow meter that has been especially developed for measuring the delivery volume of wet compressed air directly downstream of compressors.

The large measuring span 1:130 and an accuracy of <0.5 % of the measured value (0.2 Qmax to Qmax) are unique.

Service or maintenance can be carried out at any time via the mounting plate (zero-point correction, condensate drain, sensor replacement for calibration), even during operation under pressure.

Mechanical advantages

- Accuracy < 0,5%, approved by DIN EN ISO/IEC 17025 certificate
- Huge turn down ratio 1:130
- Fast reaction time, detection of peaks, no adaption time necessary like in case of ultra sound gas counters
- No long straight inlet section required
- Extremely low pressure drop, < 70 mbar at max flow
- Applicable for all gas types (just set up the gas density)
- Pressure range up to 10 bar(g), 30 bar(g), 100 bar(g)
- Direct output of standardized volume flow Nm^3, Nm^3/h (DIN 1343 resp. ISO 1217)
- Addtional outputs: temperature in °C or °F, pressure and differential pressure in bar, psi…
- Available output signals: Modbus-RTU, Modbus TCP, POE, MBus, HART, 4 ... 20 mA
- ATEX Version for flammable and combustible gases coming soon

Mechanical advantages

Robust and long-term stable:

- The Venturi tube manufactured in accordance with ISO 5167-3 is the basis for highly precise measurement results, an internationally recognized standard
- No moving parts as with turbines or gas meters, no ageing of bearings or damage like in case of turbines due to particles or abrasion
- Long-term stable measurement thanks to robust and highly accurate pressure and temperature sensors
- Insensitive to pressure surges and exceeding of the measuring range limit thanks to the use of long-erm stable precision pressure sensors with high overload resistance and stainless-steel diaphragms
- Typical gas meters, turbines, rotary pistons etc. can only be used in dry air or gas
- Simple service and maintenance (zero point correction, condensate drain, sensor replacement for calibration) also possible during operation under pressure.

Easy servicing and practicality

During development, attention was paid to practicality and, above all, easy servicing. Thanks to the multifunctional valve block, all necessary maintenance and service work can be carried out safely and without removing the venturi tube under pressure.

Condensate drain

When installed directly behind the compressor, the water separators do not always operate 100%. Condensate can be drained via the drain valve during operation

Zero-point adjustment of the differential pressure sensor

A zero point adjustment of the differential pressure sensor can be carried out at any time via the display during operation under pressure and flow.

Sensor replacement

The sensor can be disconnected from the line pressure during operation via the valve block and can be sent for calibration and service.

Use of the CMM 500 to save costs

Continious measurement of the volumen flow helps to save costs

Sample calculation

Compressor 250 kW(el) * 6000 operatin hours * 0,17 €/kWh
Annual electricity costs: 255.000 €

Clogged, dirty intake filters or wear can sometimes cause up to 10% loss of performance.
This corresponds to **25.500 € p.a.**

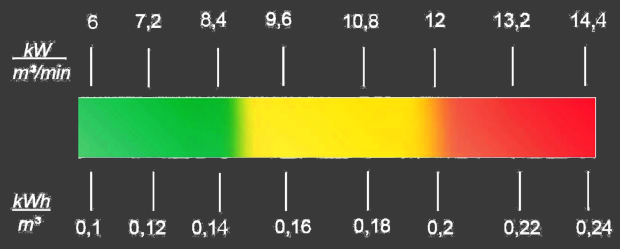

With the **CMM 500 Compressor Master Meter**, you can continuously monitor the volume flow. Problems are detected at an early stage and appropriate countermeasures can be taken

ANALYSIS OF THE SPECIFIC POWER

The specific power of the compressor can be calculated by measuring the power consumption and simultaneously measuring the volume flow. The specific power is calculated using the ratio of the energy consumption required in kWh to the volume of air delivered in m³ over the same period of time

$$\text{Specific power} = \frac{\text{kWh}}{\text{m}^3}$$

The specific power index of the compressor provides information about the nature of the compressor. The color bar below can be used as an evaluation aid

A typical specific power of an oil-injected compressor can be as follows:

Delivery rate: 43,7 Nm3/min (according to ISO 1217 based on 20°C, 1000 mbar)
Total power consumption: 272,7 kW
Specific power = 272,7 kW / 43,7 m³/min
= 6,24 kW / m³/min
= 0,104 kWh / m³

Efficiency measurement of compressors for energy saving - AIR AUDITS -

The volume flow of compressors depends on the intake air.

The installation location and climatic conditions must already be taken into account when designing compressed air stations.

Large temperature fluctuations, e.g. between day and night, lead to uneven delivery quantities.

The CMM 500 is the heart of a complete measuring system for compressors consisting of:

- **DS 500 mobile**
  Intelligent mobile paperless recorder with 12 sensor inputs for data analysis and evaluation with 6 GB memory
- **CMM 500 Compressor Master Meter**
  for high-precision measurement of the volume flow in relation to standard ISO 1217 or DIN 1343 in Nm³/h, Nm³, Nm³/min or l/s
- **IAC 500 Indoor Air Quality Sensor**
  for measuring the intake air of the compressor, humidity, absolute pressure and temperature
- **CS PM 600 Mobile Current / Effective Power Meter**
  for measuring the total power consumption of the compressor

With the complete measuring system for efficiency measurement (specific power kWh/m³), the efficiency of the compressor can be calculated for ISO 1217 (20 °C and 1000 mbar) or for intake conditions.

This volume flow therefore does not refer to compressed air, but to expanded air according to ISO 1217 at 20 °C and 1000 mbar or to the respective ambient conditions in the compressor room.

Notice

VA 570 - Inline flow meter

Flange version

Version with pipe thread R thread or NPT thread

VA 570 is supplied with an integrated measuring section. The measuring sections are available in flanged version or with R resp. NPT thread.

A special feature is the removable measuring head. So the measuring unit can be removed easily and quickly for calibration or cleaning purposes without having to dismount the measuring section intricately. During this period the measuring section is sealed by a closing cap (accessory).

The screwing with a centring device is designed such that the sensor is positioned accurately in the centre when screwing it into the measuring section; furthermore, it enables an exact positioning in the flow direction. This eliminates unnecessary measuring faults.

Approvals:

- II 2G Ex db IIC T4 Gb
- II 2D Ex tb IIIC T90°C Db
- Ex db IIC T4 Gb
- Ex tb IIIC T90°C Db

The sensor can be removed and cleaned

Special measurement technology features:

- 4 values on the display: Flow, total consumption, velocity, temperature. Units freely adjustable
- All measured values, settings such as gas type, inner diameter, serial number and so on can be accessed via Modbus-RTU
- Comprehensive diagnostic functions readable on the display or remote access via Modbus such as calibration cycle, error codes, serial number
- Notification in case of exceeding the calibration cycle
- Standard version accuracy 1.5% of m.v. ± 0.3% of f.s.
- Precision version accuracy 1.0% of m.v. ± 0.3% of f.s
- Measuring span of 1 : 1000 (0.1 up to 224 m/s)
- Configuration and diagnosis via display, hand-held device PI 500, PC service software on-site
- Gas type (air, nitrogen, oxygen, argon and so on) freely adjustable via PC service software or external device DS 400, DS 500, PI 500
- Reference conditions °C and mbar/hPa freely adjustable
- Zero-point adjustment, leak flow volume suppression
- Pressure loss negligible

Special mechanical features:

- Robust impact-proof aluminium die cast housing for the outdoor area IP 67
- All wetted parts made from stainless steel 1.4404
- On request with DVGW approval for natural gas (up to 16 bar)
- Pressure range up to 16 bar, special version up to 40 bar
- Media temperature range up to 180 °C (ATEX + IECEx version up to 120 °C)
- No moveable parts, no wear
- Sensor tip very robust, easy to clean
- Housing rotatable, display rotatable by 180°

VA 570_ATEX_V.05

VA 570 - Inline flow meter

Example order code VA 570:

0695 0570_A1_B1_C1_D1_E1_F1_G1_H1_I1_J1_K1_M1_R1_Y1

Process connection	
A1	R male thread
A2	NPT male thread
A3	Flange DIN EN 1092-1
A4	Flange ANSI 16.5 Class 150 lbs
A5	Flange ANSI 16.5 Class 300 lbs

Display option	
B1	with integrated display
B2	without display

Option signal outputs / bus connection	
C1	2 units 4...20 mA analogue output (electrically isolated), pulse output, RS 485 (Modbus-RTU)
C4	1 x 4…20 mA analogue output (not electrically isolated), pulse output, RS 485 (Modbus-RTU)
C5	Ethernet interface (Modbus / TCP), 1 x 4...20 mA analogue output (not electrically isolated), pulse output, RS 485 (Modbus-RTU)
C6	HART protocol, 1 x 4…20 mA output (not galvanically isolated), pulse output, without RS 485 (Modbus RTU)
C8	M-Bus, 1 x 4…20 mA analogue output (not electrically isolated), pulse output, RS 485 (Modbus-RTU)
C9	Ethernet interface PoE (Power over Ethernet) (Modbus/TCP), 1 x 4…20 mA analogue output (not electrically isolated), pulse output, RS 485 (Modbus-RTU)
C10	IO-Link, 1 x 4…20 mA output (not galvanically isolated), pulse output, RS 485 (Modbus RTU)

Adjustment/calibration	
D1	No real gas adjustment - gas type configuration per gas constant
D2	Real gas adjustment in the gas type selected below

Gas type	
E1	Compressed air
E2	Nitrogen (N2)
E3	Argon (Ar)
E4	Carbon dioxide (CO2)
E5	Oxygen (O2)
E6	Nitrous oxide (N2O)
E7	Natural gas (NG)
E8	Helium (He) (real gas adjustment **D2** required)
E9	Propane (C3H8) (real gas adjustment **D2** required)
E10	Methane (CH4)
E11	Biogas (methane 50% : CO2 50%)
E12	Hydrogen (H2) (real gas adjustment **D2** required)
E90	Further gas / please indicate gas type (on request)
E91	Gas mixture / please indicate mixture ratio (on request)

Reference standard	
F1	20 °C, 1000 mbar
F2	0 °C, 1013.25 mbar
F3	15 °C, 981 mbar
F4	15 °C, 1013.25 mbar

Maximum pressure	
G1	16 bar
G2	40 bar
G3	2 bar

Surface conditon	
H1	standard version
H2	Special cleaning - oil and grease free (e. g. for oxygen applications and so on)
H3	Silicone-free version including special cleaning oil- and grease-free

Accuracy class	
I1	± 1.5% of the measured value ± 0.3% f.s. (standard)
I2	± 1% of the measured value ± 0.3% f.s. (precision)

Maximum gas temperature on the sensor tip	
J1	up to 120 °C gas temperature (only for ATEX + IECEx version)
J2	up to 180 °C gas temperature (standard)

Approvals	
K1	Non-explosive area - no approval
K2	ATEX: II 2G Ex db IIC T4 Gb II 2D Ex tb IIIC T90°C Db IECEx: Ex db IIC T4 Gb Ex tb IIIC T90°C Db
K3	DVGW approval for natural gas (max. pressure 16 bar)

Measuring range (see table)	
M1	Max version (185 m/s)
M2	Low-speed version (50 m/s)
M3	Standard version (92,7 m/s)
M4	High-speed version (224 m/s)

Special measuring range	
R1	Special measuring range (please specify when placing order)

Option pressure measurement (only with K1 and J1), E1 - E4 + E6	
Y1	without pressure sensor
Y2	with integrated pressure sensor -1...0 bar(g)
Y3	with integrated pressure sensor 10...2000 mbar(abs)
Y4	with integrated pressure sensor 0...1,6 bar(g)
Y5	with integrated pressure sensor 0...16 bar(g)
Y6	with integrated pressure sensor 0...40 bar(g)

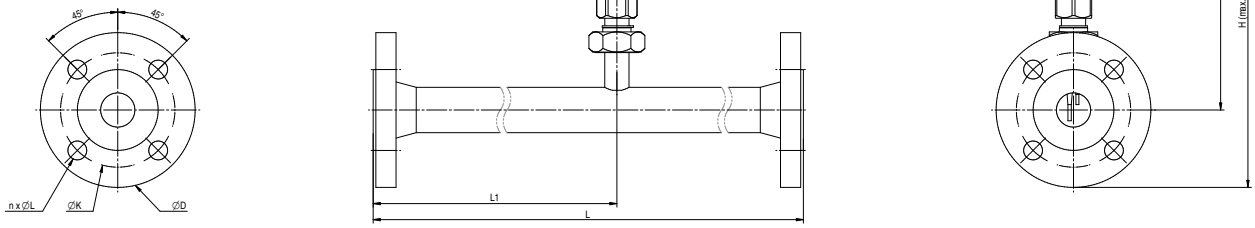

VA 570_ATEX_V.05

Order no. VA 570

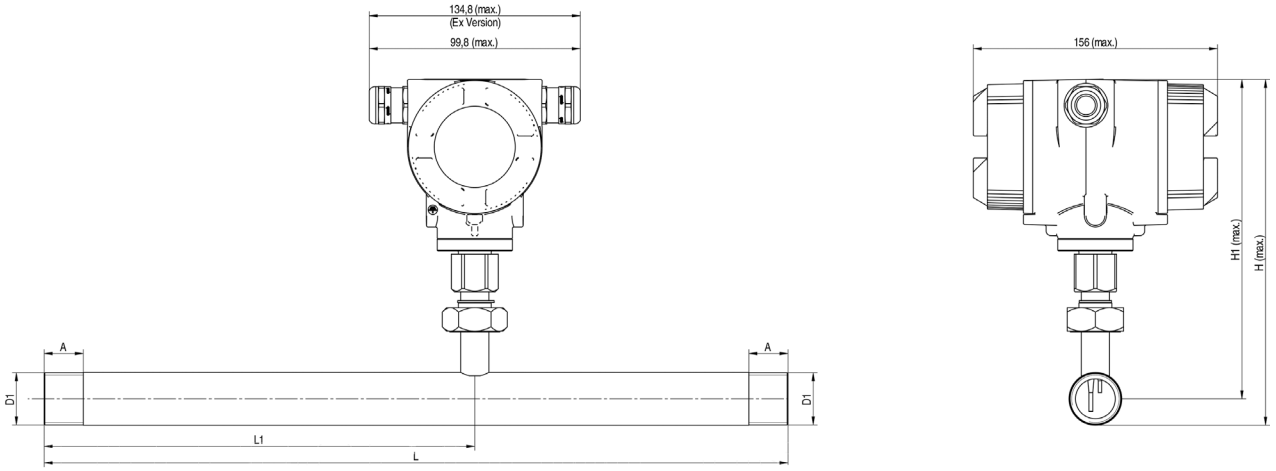

DESCRIPTION	ORDER NO.
VA 570 flow meter with integrated 1/2" measuring section	0695 0570 + order code A_…R_
VA 570 flow meter with integrated 3/4" measuring section	0695 0571
VA 570 flow meter with integrated 1" measuring section	0695 0572
VA 570 flow meter with integrated 1 1/4" measuring section	0695 0573
VA 570 flow meter with integrated 1 1/2" measuring section	0695 0574
VA 570 flow meter with integrated 2" measuring section	0695 0575
VA 570 flow meter with integrated DN 15 measuring section with flange	0695 2570
VA 570 flow meter with integrated DN 20 measuring section with flange	0695 2571
VA 570 flow meter with integrated DN 25 measuring section with flange	0695 2572
VA 570 flow meter with integrated DN 32 measuring section with flange	0695 2573
VA 570 flow meter with integrated DN 40 measuring section with flange	0695 2574
VA 570 flow meter with integrated DN 50 measuring section with flange	0695 2575
VA 570 flow meter with integrated DN 65 measuring section with flange	0695 2576
VA 570 flow meter with integrated DN 80 measuring section with flange	0695 2577
Further accessories:	
Closing cap for measuring section in aluminium	0190 0001
Closing cap for measuring section stainless steel 1.4404	0190 0002
Connection cable for probes 5 m with open ends	0553 0108
Connection cable for probes 10 m with open ends	0553 0109
Ethernet connection cable length 5 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2503
Ethernet connection cable length 10 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2504
Mains unit in wall housing for maximum 2 sensors of the series VA/FA 5xx, 100-240 V, 23 VA, 50-60 Hz / 24 VDC, 0.35 A	0554 0110
ISO calibration certificate at 5 measuring points for VA sensors	3200 0001
Additional calibration point (point freely selectable) Volume flow	0700 7720
CS Service Software VA 550 incl. interface cable to PC (USB) and power supply - for configuration / parametrisation of VA 550	0554 2007
PNG cable screwing - standard VA 550/570	0553 0552
PNG cable screwing - for ATEX + IECEx version VA 550/570	0553 0551

TECHNICAL DATA VA 570	
Measuring range VA 570:	up to 50 Nm/s, low-speed version* up to 92.7 Nm/s, standard version* up to 185 Nm/s, max. version* up to 224 Nm/s, high-speed version* * Measuring range Nm³/h for different pipe diameters and gases, see table measuring ranges flow * All measured values related to DIN 1343 standard conditions 0° and 1013 mbar ex works
Accuracy: **Accuracy class** **(o. M. V. = of measured value)** **(o. F. S. = of full scale)**	± 1.5% of m.v. ± 0.3 % of f.s. on request: ± 1.0% of m.v. ± 0.3 % of f.s.
Accuracy indications:	relative to ambient temperature 22 °C ± 2 °C, system pressure 6 bar
Repeatability:	0.25% of m.v. in case of correct mounting (mounting aid, position, inlet section)
Measuring principle:	Thermal mass flow sensor
Response time:	t90 < 3 s
Operating / ambient temperature range:	-20…70 °C
Media temperature range:	-20 °C …. 180 °C (ATEX + IECEx version: -20°C ... 120 °C)
Adjustment possibilities via display, external hand-held device PI 500, PC Service Software, remote diagnosis:	Nm³/h, Nm³/min, Nl/min, l/s, ft/min, cfm, kg/h, kg/min, inner diameter, reference conditions ° C/° F, mbar/ hPa, zero point correction, leak flow volume suppression, scaling analogue output 4...20 mA, pulse/alarm, error codes etc.
Outputs:	Standard: 1 x 4…20 mA analogue output (not electrically isolated), pulse output, RS 485 (Modbus-RTU) **Optional:** 2 x 4 ... 20 mA active, Modbus TCP, HART, Profibus DP, Profinet, M-Bus, IO-Link
Burden:	< 500 Ohm
Additional average value calculation:	for all parameters freely adjustable from 1 minute up to 1 day, e. g. 1/2 hours average value, average day value
Protection class:	IP 67 IP 65 for ATEX + IECEx
Material:	Die-cast aluminum housing, sensor tube stainless steel 1.4404
Operating pressure:	16 bar, in special version 40 bar
Power supply:	18…36 VDC, 5 W
Approval:	ATEX: II 2G Ex db IIC T4 Gb II 2D Ex tb IIIC T90°C Db IECEx: Ex db IIC T4 Gb Ex tb IIIC T90°C Db DVGW

VA 570_ATEX_V.54

Notes

VA 550 - Flow meter insertion type

Flow sensor for installation in existing compressed air or gas line of 3/4" to > DN 1000

Housing IP 67

Outputs:
4…20 mA, pulse, Modbus, M-Bus, Profi Bus, Ethernet, HART

Housing rotatable, display 180° rotatable (on the head). Settings can be modified via display, flow meter can be reset

Advantages of optical keys:
The sensor can also be configured in the ATEX + IECEx area, without the housing needing to be opened.

All wetted parts made from stainless steel

Approvals:

- II 2G Ex db IIC T4 Gb
- II 2D Ex tb IIIC T90°C Db
- Ex db IIC T4 Gb
- Ex tb IIIC T90°C Db

The sensor can be removed and cleaned

Special measurement technology features:

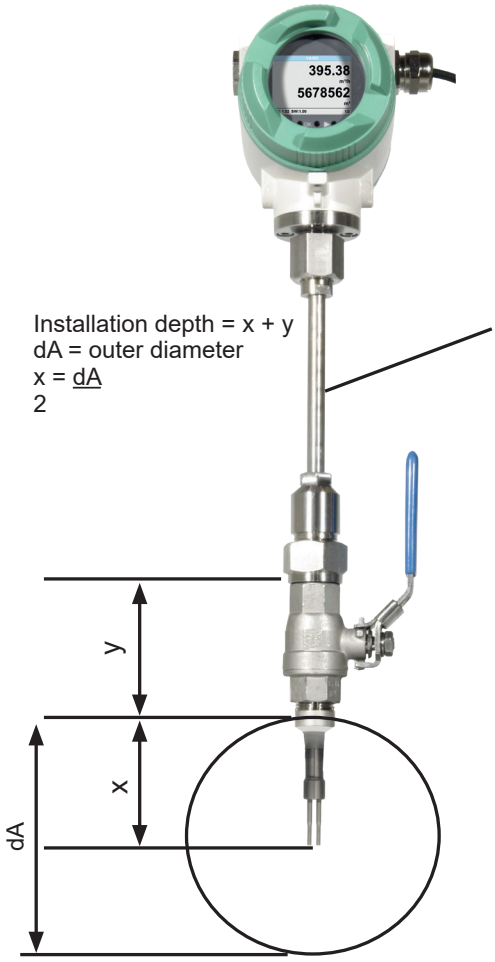

- 4 values on the display: Flow, total consumption, velocity, temperature. Units freely adjustable
- All measured values, settings such as gas type, inner diameter, serial number and so on can be accessed via Modbus-RTU
- Comprehensive diagnostic functions readable on the display or remote access via Modbus such as calibration cycle, error codes, serial number
- Notification in case of exceeding the calibration cycle
- Standard version accuracy 1.5% of m.v. ± 0.3% of f.s.
- Precision version accuracy 1.0% of m.v. ± 0.3% of f.s
- Measuring span of 1 : 1000 (0.1 up to 224 m/s)
- Configuration and diagnosis via display, hand-held device PI 500, PC service software on-site
- Gas type (air, nitrogen, oxygen, argon and so on) freely adjustable via PC service software or external device DS 400, DS 500, PI 500
- Reference conditions °C and mbar/hPa freely adjustable
- Zero-point adjustment, leak flow volume suppression
- Pressure loss negligible

Special mechanical features:

- Robust impact-proof aluminium die cast housing for the outdoor area IP 67
- All wetted parts made from stainless steel 1.4571
- Suitable as an insertion version for 3/4" to DN >1000
- On request with DVGW approval for natural gas (up to 16 bar)
- Pressure range up to 50 bar, special version up to 100 bar
- Media temperature range up to 180 °C (ATEX + IECEx version up to 120 °C)
- No moveable parts, no wear
- Sensor tip very robust, easy to clean
- Easy installation and removal under pressure via 1/2" ball valve
- Housing rotatable, display rotatable by 180°
- Safety ring for installation and removal under pressure
- Depth scale for precise installation

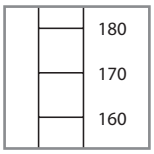

VA 550_ATEX_V.05

Easy mounting/dismounting of **VA 550** under pressure - without disconnection of the line - without emptying the line

Installation depth = x + y
dA = outer diameter
$x = \frac{dA}{2}$

Engraved depth scale for precise installation

If there is no suitable measuring site with 1/2" ball valve, there are two simple possibilities to set up a measuring site:

A Weld on a 1/2" screw neck and screw on a 1/2" ball valve

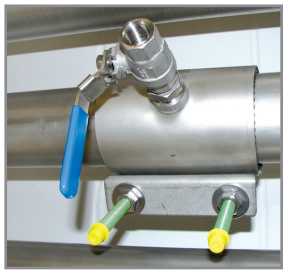

B Mount spot drilling collar including ball valve

By means of the drilling jig, it is possible to drill under pressure through the 1/2" ball valve into the existing pipe. The drilling chips are collected in a filter. Then the probe can be mounted.

A Screw neck

Order no.: 3300 0006

B Hot tapping saddle

Order no.: see page 132

Drill under pressure with the CS drilling jig

Order no.: 0530 1108

Ethernet Modbus TCP

M12 Ethernet port, x-coded

Optional: Connection to different Bus systems

There are different options available for connection to modern Bus systems:

- Ethernet interface (Modbus-TCP) / PoE
- M-BUS
- Modbus-RTU
- Profibus DP interface (in process)
- Profinet interface (in process)
- HART
- IO-Link

For further accessories refer to pages 126 to 132

IO-Link HART PROFIBUS PROFINET M-Bus

VA 550 - Flow meter insertion meter

Example order code VA 550:

0695 0550_A1_B1_C1_D1_E1_F1_G1_H1_I1_J1_K1_L1_M1_R1_Y1

Measuring range (see table page 136 to 139)	
A1	Standard version (92,7 m/s)
A2	Max version (185 m/s)
A3	High-speed version (224 m/s)
A4	Low-speed version (50 m/s)

Screw-in thread	
B1	G 1/2" male thread
B2	1/2" NPT male thread

Installation length / shaft length	
C1	220 mm
C2	300 mm
C3	400 mm
C4	500 mm
C5	600 mm
C6	700 mm
C7	160 mm
C8	1000 mm
C9	1500 mm

Display option	
D1	with integrated display
D2	without display

Signal outputs / bus connection option	
E1	2 units 4...20 mA analogue output (electrically isolated), pulse output, RS 485 (Modbus-RTU)
E4	1 x 4…20 mA analogue output (not electrically isolated), pulse output, RS 485 (Modbus-RTU)
E5	Ethernet interface (Modbus / TCP), 1 x 4...20 mA analogue output (not electrically isolated), pulse output, RS 485 (Modbus-RTU)
E6	HART protocol, 1 x 4…20 mA output (not galvanically isolated), pulse output, without RS 485 (Modbus RTU)
E8	M-Bus, 1 x 4…20 mA analogue output (not electrically isolated), pulse output, RS 485 (Modbus-RTU)
E9	Ethernet interface PoE (Power over Ethernet) (Modbus/TCP), 1 x 4…20 mA analogue output (not electrically isolated), pulse output, RS 485 (Modbus-RTU)
E10	IO-Link, 1 x 4…20 mA output (not galvanically isolated), pulse output, RS 485 (Modbus RTU)

Adjustment / calibration	
F1	No real gas adjustment - gas type configuration per gas constant
F2	Real gas adjustment in the gas type selected below

Gas type	
G1	Compressed air
G2	Nitrogen (N2)
G3	Argon (Ar)
G4	Carbon dioxide (CO2)
G5	Oxygen (O2) (max. 120 °C)
G6	Nitrous oxide (N2O)
G7	Natural gas (NG)
G8	Helium (He) (real gas adjustment **F2** required)
G9	Propane (C3H8) (real gas adjustment **F2** required)
G10	Methane (CH4)
G11	Biogas (methane 50% : CO2 50%)
G12	Hydrogen (H2) (real gas adjustment **F2** required)
G90	Further gas / please indicate gas type (on request)
G91	Gas mixture / please indicate mixture ratio (on request)

Maximum pressure (more than 10 bar high-pressure protectection required!)	
H1	50 bar
H2	100 bar
H3	16 bar
H4	2 bar

Surface conditon	
I1	standard version
I2	special cleaning - oil and grease free (e.g. for oxygen applications and so on)
I3	Silicone-free version including special cleaning oil- and grease-free

Accuracy class	
J1	± 1.5% of the measured value ± 0.3% f.s. (standard)
J2	± 1% of the measured value ± 0.3% f.s. (precision)

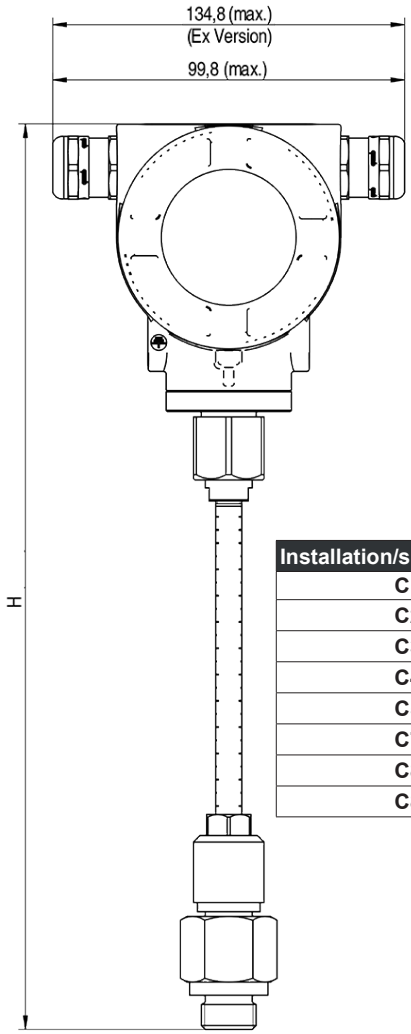

Maximum gas temperature on the sensor tip	
K1	up to 120 °C gas temperature (only for ATEX + IECEx version)
K2	up to 180 °C gas temperature (standard)

Approvals	
L1	Non-explosive area - no approval
L2	ATEX: II 2G Ex db IIC T4 Gb II 2D Ex tb IIIC T90°C Db IECEx: Ex db IIC T4 Gb Ex tb IIIC T90°C Db
L3	DVGW approval for natural gas (max. pressure 16 bar)

Order no. VA 550

DESCRIPTION	ORDER NO.
VA 550 Flow meter, measuring head in robust aluminium die casting housing	0695 0550 + Order code A_…R_

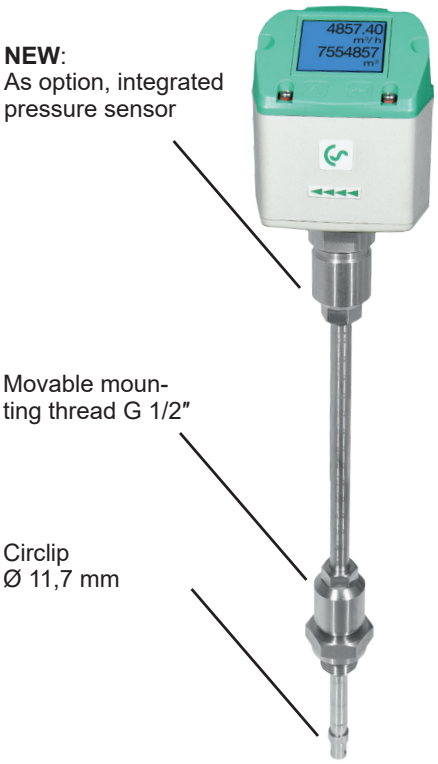

TECHNICAL DATA VA 550	
Measuring range VA 550:	up to 50 Nm/s, low-speed version* up to 92.7 Nm/s, standard version* up to 185 Nm/s, max. version* up to 224 Nm/s, high-speed version* * Measuring range Nm³/h for different pipe diameters and gases, see table measuring ranges flow * All measured values related to DIN 1343 standard conditions 0° and 1013 mbar ex works
Accuracy: Accuracy class (o. M. V. = of measured value) (o. F. S. = of full scale)	± 1.5 % of m.v. ± 0.3 % of f.s. on request: ± 1.0 % of m.v. ± 0.3 % of f.s.
Accuracy indications:	relative to ambient temperature 22 °C ± 2 °C, system pressure 6 bar
Repeatability:	0.25 % of m.v. in case of correct mounting (mounting aid, position, inlet section)
Measuring principle:	Thermal mass flow sensor
Response time:	t 90 < 3 s
Operating / ambient temperature range:	-20…70 °C
Media temperature range:	-20 °C …. 180 °C (ATEX + IECEx version: -20°C ... 120 °C)
Adjustment possibilities via display, external hand-held device PI 500, PC Service Software, remote diagnosis:	Nm³/h, Nm³/min, Nl/min, l/s, ft/min, cfm, kg/h, kg/min, inner diameter, reference conditions ° C/° F, mbar/hPa, zero point correction, leak flow volume suppression, scaling analogue output 4...20 mA, pulse/alarm, error codes etc.
Outputs:	**Standard**: 1 x 4…20 mA analogue output (electrically not isolated), pulse output, RS 485 (Modbus-RTU) **Optional**: 2 x 4...20 mA active, Modbus TCP, HART, Profibus DP, Profinet, M-Bus, IO-Link
Burden:	< 500 ohm
Additional average value calculation:	for all parameters freely adjustable from 1 minute up to 1 day, e. g. 1/2 hours average value, average day value
Protection class:	IP 67 IP 65 for ATEX + IECEx
Material:	Die-cast aluminum housing, sensor tube stainless steel 1.4404
Screw-in thread:	G 1/2" ISO 228, NPT 1/2", R 1/2", PT 1/2"
Operating pressure VA 550:	50 bar, in special version 100 bar (with DVGW approval max. 16 bar)
Power supply:	18…36 VDC, 5 W
Approval:	ATEX: II 2G Ex db IIC T4 Gb II 2D Ex tb IIIC T90°C Db IECEx: Ex db IIC T4 Gb Ex tb IIIC T90°C Db DVGW

Further accessories:

DESCRIPTION	ORDER NO.
Connection cable for probes 5 m with open ends	0553 0108
Connection cable for probes 10 m with open ends	0553 0109
Ethernet connection cable length 5 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2503
Ethernet connection cable length 10 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2504
Mains unit in wall housing for maximum 2 sensors of the series VA/FA 5xx, 100-240 V, 23 VA, 50-60 Hz / 24 VDC, 0.35 A	0554 0110
ISO calibration certificate at 5 measuring points for VA 500/550	3200 0001
Additional calibration point for volume flow (point freely selectible)	0700 7720
CS Service Software VA 550 incl. interface cable to PC (USB) and power supply - for configuration / parametrization of VA 550	0554 2007
High-pressure protection recommended for installation from 10 to 100 bar (for VA 550)	0530 2205
High-pressure protection recommended for installation from 10 to 16 bar DVGW (for VA 550)	0530 2205
PNG cable screwing - standard VA 550/570	0553 0552
PNG cable screwing - for ATEX + IECEx version VA 550/570	0553 0551

VA 550_ATEX_V.05

VA 500 - Flow meter for compressed air and gases

Special features:

- **NEW**: Optional with IO-Link interface
- Including temperature measurement, optional: pressure measurement
- RS 485 interface, Modbus-RTU as standard
- Integrated display for m³/h and m³
- Applicable from 1/2” to DN 1000
- Easy installation under pressure
- 4...20 mA analogue output for m³/h or m³/min
- Pulse output for m³ or M-Bus (optional)
- Inner diameter adjustable by means of keys
- Flow meter can be reset
- Adjustable by means of keypad on the display: Reference conditions, °C and mbar, 4...20 mA scaling, pulse weight

Inner diameter adjustable via keypad

Option:
Bi-directional measurement. Blue or green arrows in the display indicate the direction of flow.
A meter reading is available for each flow direction.

The sensor can be removed during operation and cleaned if necessary.

TECHNICAL DATA VA 500	
Parameters:	m³/h, l/min (1000 mbar, 20 °C) in case of compressed air or Nm³/h, Nl/min (1013 mbar, 0 °C) in case of gases
Units adjustable via keys at display:	m³/h, m³/min, l/min, l/s, ft/min, cfm, m/s, kg/h, kg/min, g/s, lb/min, lb/h
Adjustable via keypad:	Diameter for volume flow calculation, counter resettable
Sensor:	Thermal mass flow sensor
Measured medium:	Air, gases
Gas types are adjustable over CS service software or CS data logger:	Air, nitrogen, argon, helium, CO2, oxygen, vacuum
Measuring range:	See table page 94
Accuracy: (m.v.: of meas. value) (f.s.: of full scale)	± 1.5% of m.v. ± 0.3 % of f.s. on request: ± 1% of m.v. ± 0.3% of f.s.
Operating temperature:	-30...110 °C sensor tube -20...85 °C with pressure sensor -20...+70 °C housing
Operating pressure:	-1…50 bar (for pressure > 10 bar - order additional high-pressure protection)
Digital output:	RS 485 interface, (Modbus-RTU), optional: Ethernet interface PoE, M-Bus, IO-Link
Analogue output:	4…20 mA for m³/h or l/min
Pulse output:	1 pulse per m³ or per litre electrically isolated. Pulse weight can be set on the display. Alternatively, the pulse output can be used as an alarm
Supply:	18…36 VDC, 5 W
Burden:	< 500 Ω
Housing:	Polycarbonate (IP 65)
Sensor tube:	Stainless steel, 1.4301 Installation length 220 mm, Ø 10 mm
Mounting thread:	G 1/2″, 1/2″ NPT male thread
Ø housing:	65 mm
Mounting position:	any

VA 500- Flow meter

Example order code VA 500:

0695 5001_B1_C1_D1_E1_F1_H1_J1_K1_L1_M1_N1_O1_P1_R1_Y1

Measuring range (see table page 136 to 139)	
B1	Standard version (92,7 m/s)
B2	Max version (185 m/s)
B3	High-Speed version (224 m/s)
B4	Low-Speed version (50 m/s)

Screw-in thread	
C1	G 1/2" male thread
C2	1/2" NPT male thread
C3	PT 1/2" male thread

Installation length / shaft length	
D1	220 mm
D2	120 mm
D3	160 mm
D4	300 mm
D5	400 mm
D6	500 mm
D7	600 mm
D8	700 mm

Display option	
E1	with integrated display
E2	without display

Signal outputs / bus connection option	
F8	M-Bus, 1 x 4…20 mA analogue output (not electrically isolated), RS 485 (Modbus-RTU)
F9	1 x 4…20 mA analogue output (not electrically isolated), pulse output, RS 485 (Modbus-RTU)
F10	Ethernet interface (Modbus / TCP), 1 x 4...20 mA analogue output (not electrically isolated), RS 485 (Modbus-RTU)
F11	Ethernet interface PoE (Power over Ethernet) (Modbus/TCP), 1 x 4…20 mA analogue output (not electrically isolated), RS 485 (Modbus-RTU)
F12	IO-Link, 1 x 4…20 mA analog output (not galvanically isolated), RS 485 (Modbus RTU), pulse output not applicable

Surface conditon	
H1	standard version
H2	special cleaning - oil and grease free (e.g. for oxygen applications and so on)
H3	Silicone-free version including special cleaning oil- and grease-free

Adjustment / calibration	
J1	No real gas adjustment - gas type configuration per gas constant
J2	Real gas adjustment in the gas type selected below

Gas type	
K1	Compressed air
K2	Nitrogen (N2)
K3	Argon (Ar)
K4	Carbon dioxide (CO2)
K5	Oxygen (O2)
K6	Nitrous oxide (N2O)
K7	Natural gas (NG)
K8	Helium (He) (real gas adjustment **J2** required)
K9	Propane (C3H8) (real gas adjustment **J2** required)
K10	Methane (CH4)
K12	Further gas / please indicate gas type (on request)
K13	Gas mixture / please indicate mixture ratio (on request)

Reference standard	
L1	20 °C, 1000 mbar
L2	0 °C, 1013,25 mbar
L3	15 °C, 981 mbar
L4	15 °C, 1013,25 mbar

Accuracy class	
M1	± 1.5% of the measured value ± 0.3% f.s. (standard)
M2	± 1% of the measured value ± 0.3% f.s. (precision)

Approvals	
N1	Non-explosive area - no approval

Bi-directional measurement	
O1	without
O2	with (includes 2 x 4...20 mA analog outputs and 2x pulse outputs. These are omitted for Ethernet (PoE) and M-Bus).

Maximum pressure (more than 10 bar high-pressure protectection required!)	
P1	50 bar (only with Y1)
P2	16 bar (only with Y2)

Special measuring range	
R1	Special measuring range (please specify when placing order)

Option pressure measurement (only with: D1, D4, D5, D6, K1, K2, K3, H1, O1, P2)	
Y1	without pressure sensor
Y2	with integrated pressure sensor 0...16 bar(g) (Output only via digital interfaces)
Y3	with integrated pressure sensor 10...2000 mbar (abs), for vacuum applications (output only via digital interfaces)

DESCRIPTION	ORDER NO.
High-pressure protection recommended for installation from 10 to 50 bar (for VA 400/500)	See page 117
ISO calibration certificate (5 calibration points) for VA sensors	3200 0001
Additional calibration curve stored in the sensor	Z695 5011
Certificate of origin	Z695 5012

For further accessories refer to pages 126 to 132

Simple installation and removal under pressure

1) Even under pressure, the flow probe VA 500 is mounted by means of a standard 1/2" ball valve.

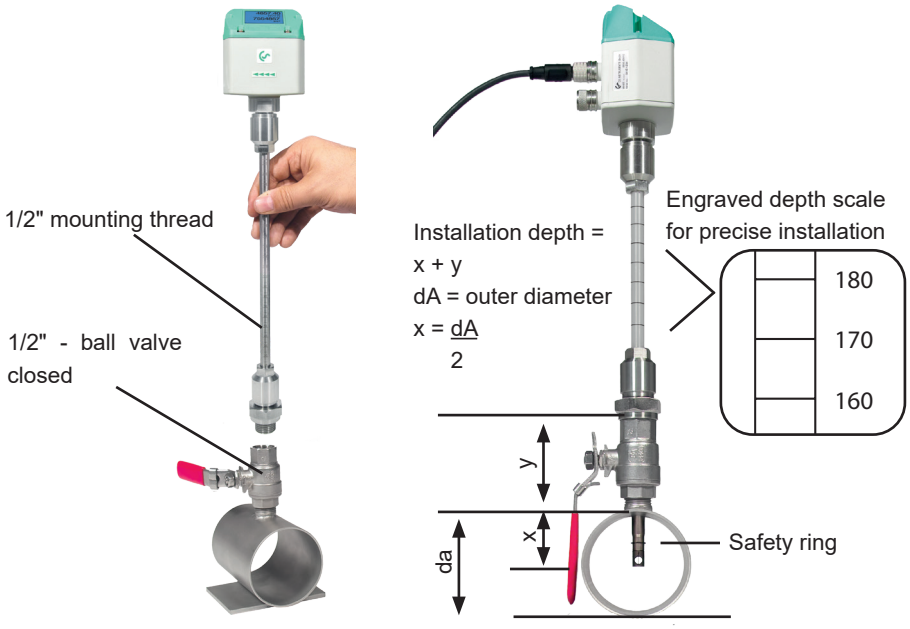

During mounting and dismounting the safety ring avoids an uncontrolled ejection of the probe which may be caused by the operating pressure.

For the mounting into different pipe diameters, VA 500 is available in the following probe lengths: 120, 160, 220, 300, 400 mm.

The flow probes are therefore suitable for being mounted into existing pipes with diameters of 1/2" to DN 300 upwards.

The exact positioning of the sensor in the middle of the pipe is granted by means of the engraved depth scale.

The maximum mounting depth corresponds to the respective probe length. (Probe length 220 mm = 220 mm maximum mounting depth).

2) If there is no suitable measuring site with 1/2" ball valve, there are two easy ways to set up a measuring site:

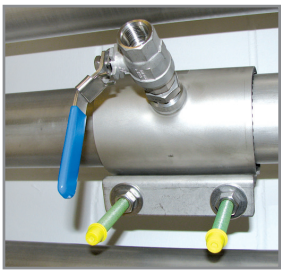

A Weld on a 1/2" screw neck and screw on a 1/2" ball valve

B Mount spot drilling collar incl. ball valve (see accessories).

By means of the drilling jig, it is possible to drill under pressure through the 1/2" ball valve into the existing pipe. The drilling chips are collected in a filter. Then install the probe as described under 1).

A Screw neck

B Hot tapping saddle

Drill under pressure with the CS drilling jig

3) Due to the large measuring range of the probe even extreme requirements to the consumption measurement (high volume flow in small pipe diameters) can be met.

The measuring range is depending on the pipe diameter - see table on the right hand side.

Flow measuring ranges VA 500 for compressed air (ISO 1217: 1000 mbar, 20 °C)
Measuring ranges for other types of gas see pages 136 to 139

Notes

VA 520 - Inline flow meter

Modbus-RTU output

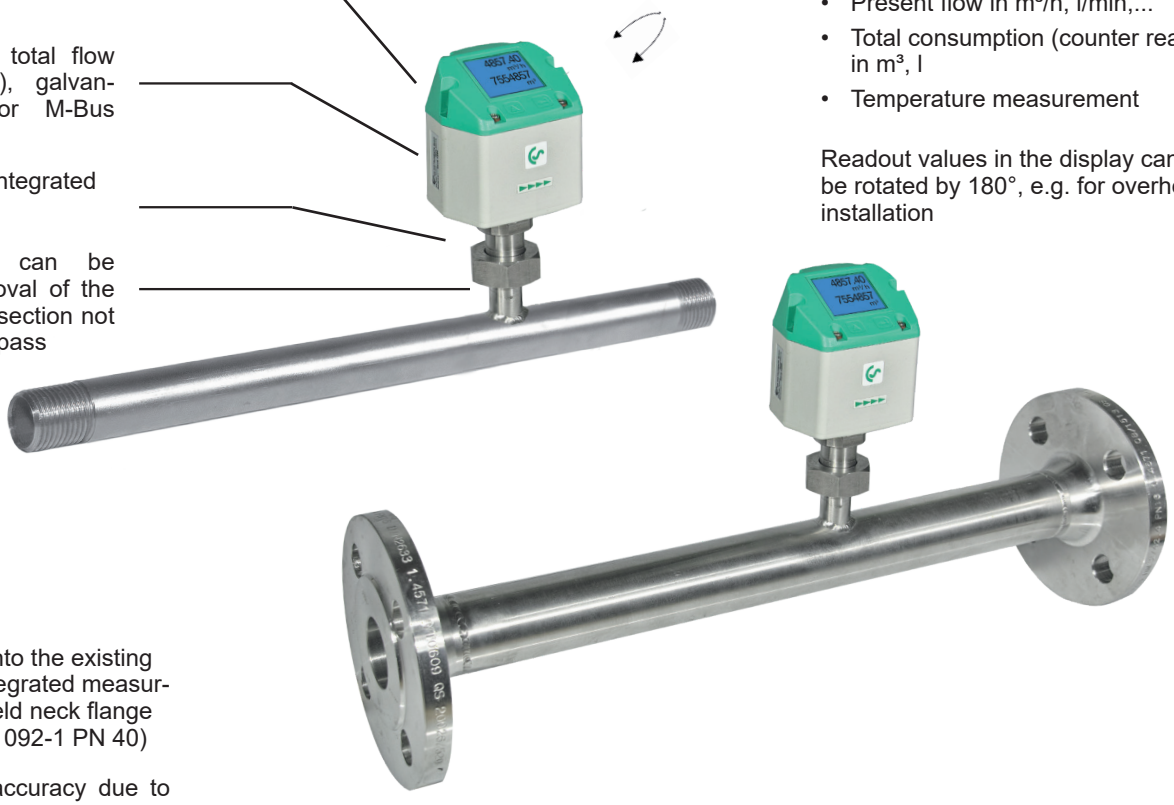

4...20 mA output for present flow

Pulse output for total flow (counter reading), galvanically isolated or M-Bus (optionally)

NEW: As option, integrated pressure sensor

Measuring unit can be unscrewed: Removal of the entire measuring section not necessary, no by-pass necessary

Display head rotatable by 180 ° e.g. in case of reverse flow direction

Display shows 2 values at the same time:

- Present flow in m³/h, l/min,...
- Total consumption (counter reading) in m³, l
- Temperature measurement

Readout values in the display can be rotated by 180°, e.g. for overhead installation

Easy installation into the existing pipeline due to integrated measuring section and weld neck flange (according to EN 1092-1 PN 40)

High measuring accuracy due to defined measuring section (inlet and outlet section)

The sensor can be removed and cleaned

With a key stroke:

- Reset counter reading
- Select units
- Zero-point adjustment, leak flow volume suppression

Option:

Bi-directional measurement. Blue or green arrows in the display indicate the direction of flow.
A meter reading is available for each flow direction.

Application-technological features of the flow meters VA 520:

- Digital interfaces such as Modbus-RTU, Ethernet (PoE) and M-Bus enable connection to higher-level systems such as energy management systems, building management systems, PLC,...
- Easy and affordable installation
- Units freely selectable via keys on the display m³/h, m³/min, l/min, l/s, kg/h, kg/min, kg/s, cfm
- Compressed air counter up to 1,999,999,999 m³ can be reset to “zero” via keypad
- Analog output 4...20 mA, pulse output (electrically isolated)
- High measuring accuracy even in the lower measuring range (ideal for leakage measurement)
- Negligibly small loss of pressure
- Calorimetric measuring principle, no additional pressure and temperature measurement necessary, no mechanically moved parts
- Comprehensive diagnostic functions can be read out on the display or remote access via Modbus-RTU such as exceeding max./min values °C, calibration cycle, error codes, serial number. All parameters can be read out and changed via Modbus

Optional: Connection to different Bus systems

There are different options available for connection to modern Bus systems:

- Ethernet interface (Modbus-TCP) / PoE
- M-BUS
- Modbus-RTU
- IO-Link

Ethernet Modbus TCP

M12 Ethernet port, x-coded

For further accessories refer to pages 106-110

IO-Link M-Bus

VA 520 - Inline flow meter

Example order code VA 520:

0695 xxxx_B1_C1_E1_F1_G1_H1_K1_L1_M1_N1_O1_R1_Y1

Measuring range (see table 114-117)	
B1	Max version (185 m/s)
B2	Low-speed version (50 m/s)
B3	Standard version (92,7 m/s)
B4	High-speed version (224 m/s)

Process connection	
C1	R male thread
C2	NPT male thread (only in 1.4404)
C3	Flange DIN EN 1092-1
C4	Flange ANSI 16.5 Class 150 lbs
C5	Flange ANSI 16.5 Class 300 lbs

Option signal outputs / bus connection	
E1	1 x 4…20 mA analogue output (not electrically isolated), pulse output, RS 485 (Modbus-RTU)
E2	M-Bus, 1 x 4…20 mA analogue output (not electrically isolated), RS 485 (Modbus-RTU)
E4	Ethernet interface (Modbus / TCP), 1 x 4...20 mA analogue output (not electrically isolated), RS 485 (Modbus-RTU)
E5	Ethernet interface PoE (Power over Ethernet) (Modbus/TCP), 1 x 4…20 mA analogue output (not electrically isolated), RS 485 (Modbus-RTU)
E6	IO-Link, 1 x 4…20 mA analog output (not galvanically isolated), RS 485 (Modbus RTU), pulse output not applicable

Adjustment/calibration	
F1	No real gas adjustment - gas type configuration per gas constant
F2	Real gas adjustment in the gas type selected below

Gas type	
G1	Compressed air
G2	Nitrogen (N2)
G3	Argon (Ar)
G4	Carbon dioxide (CO2)
G5	Oxygen (O2)
G6	Nitrous oxide (N2O)
G7	Natural gas (NG)
G8	Helium (He) (real gas adjustment **F2** required)
G9	Propane (C3H8) (real gas adjustment **F2** required)
G10	Methane (CH4)
G12	Further gas / please indicate gas type (on request)
G13	Gas mixture / please indicate mixture ratio (on request)

Reference standard	
H1	20 °C, 1000 mbar
H2	0 °C, 1013.25 mbar
H3	15 °C, 981 mbar
H4	15 °C, 1013.25 mbar

Maximum pressure	
K1	16 bar
K2	40 bar

Surface conditon	
L1	standard version
L2	Special cleaning - oil and grease free (e. g. for oxygen applications and so on)
L3	Silicone-free version including special cleaning oil- and grease-free

Accuracy class	
M1	± 1.5% of the measured value ± 0.3% f.s. (standard)
M2	± 1% of the measured value ± 0.3% f.s. (precision)

Approvals	
N1	Non-explosive area - no approval
N3	DVGW approval for natural gas (max. pressure 16 bar)

Bi-directionale measurement	
O1	without
O2	with (2 units 4...20 mA analogue output, pulse output These are omitted for Ethernet (PoE and M-Bus)

Special measuring range	
R1	Special measuring range (please specify when placing order)

Option pressure measurement (only with: G1, G2,G3, K1, L1, N1, O1)	
Y1	without pressure sensor
Y2	with integrated pressure sensor 0...16 bar(g) (Output only via digital interfaces)
Y3	with integrated pressure sensor 10...2000 mbar (Output only via digital interfaces)

Order no. VA 520

TECHNICAL DATA VA 520	
Parameters:	m³/h, l/min (1000 mbar, 20 °C) in case of compressed air or Nm³/h, Nl/min (1013 mbar, 0 °C) in case of gases
Units adjustable via keys at display:	m³/h, m³/min, l/min, l/s, ft/min, cfm, m/s, kg/h, kg/min, g/s, lb/min, lb/h
Sensor:	Thermal mass flow sensor
Measured medium:	Air, gases
Gas types are adjustable over CS service software or CS data logger:	Air, nitrogen, argon, CO2, oxygen
Measuring range:	See table above
Accuracy: (o. M. V. = of measured value) (o. F. S. = of full scale)	± 1.5% of m.v. ± 0.3% of f.s. on request: ± 1% of m.v. ± 0.3% of f.s.
Operating temperature:	-30…80 °C -20...80 °C with pressure sensor
Operating pressure:	-1 to 16 bar optionally up to PN 40
Digital output:	RS 485 interface, (Modbus-RTU), optional: Ethernet interface PoE), M-Bus, IO-Link
Analogue output:	4…20 mA for m³/h or l/min
Pulse output:	1 pulse per m³ or per litre electrically isolated. Pulse weight can be set on the display. Alternatively, the pulse output can be used as an alarm relay
Supply:	18…36 VDC, 5 W
Burden:	< 500 Ω
Housing:	Polycarbonate (IP 65)
Measuring section:	Stainless steel, 1.4404 or 1.4301
Mounting position:	any

Notes

VA 521 - Compact inline flow sensor for compressed air and other types of gas

No inlet section necessary – integrated flow straightener – sensor unit removable

The newly developed VA 521 combines modern digital interfaces for connection to energy monitoring systems with a small, compact design. The VA 521 is always used when many machines (compressed air consumers) are to be integrated into an energy monitoring network.

Integrated flow straightener - no inlet section necessary

With a key stroke:

- Reset counter reading
- Select units
- Parameterise interfaces

The sensor can be removed from the measuring section and cleaned.

Readout values in the display can be rotated by 180°, e.g. for overhead installation

Display shows 2 values at the same time:

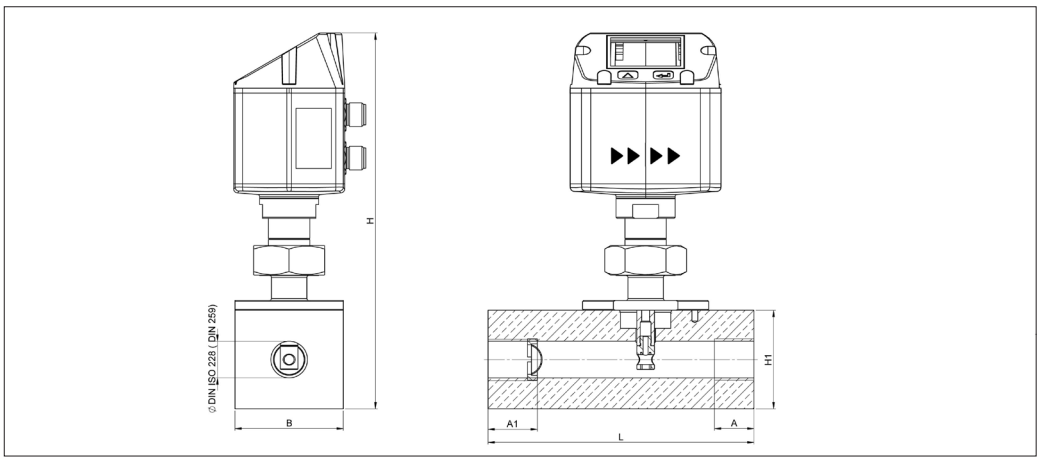

- Present flow in m³/h, l/min,...
- Total consumption (counter reading) in m³, l, kg
- Temperature measurement

Screw-in thread:

Easy installation into the existing pipe due to integrated measuring section (suitable for 1/2", 3/4", 1", 1 1/4", 1 1/2" or 2" lines)

Advantages at a glance:

- Compact, small design - for use in machines, behind maintenance unit on the end user
- All interfaces are freely programmable via the display
- Modbus-RTU output
- 4...20 mA analogue output for present flow
- Pulse output total flow (counter reading), electrically isolated. Optional: M-Bus, Ethernet interface or PoE
- **NEW**: As option, integrated pressure sensor

Flow measuring ranges VA 521 (max version 185 m/s) for compressed air (ISO 1217: 1000 mbar, 20 °C) Measuring ranges for other types of gas see pages 140 to 143

VA 525 - Compact inline flow sensor for air and nitrogen

No inlet section necessary – integrated flow straightener – optional pressure sensor

The newly developed VA 525 combines modern digital interfaces for connection to an energy monitoring system with a small, compact design. The VA 525 is always used when many machines (compressed air consumers) are to be integrated into an energy monitoring network.

Readout values in the display can be rotated by 180°, e.g. for overhead installation

Display shows 2 values at the same time:

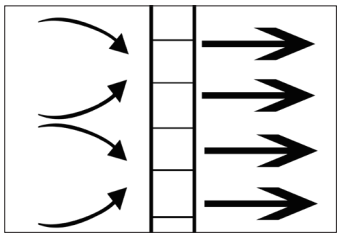

- Present flow in m³/h, l/min,...
- Total consumption (counter reading) in m³, l, kg
- Temperature measurement
- **Optional**: Pressure measurement

Screw-in thread:

Easy installation into the existing pipe due to integrated measuring section (suitable for 1/4", 1/2", 3/4", 1", 1 1/4", 1 1/2" or 2" lines)

Advantages at a glance:

- Compact, small design - for use in machines, behind maintenance unit on the end user
- Optionally with conventional analogueue signals (4…20 mA and pulse) or digital interfaces such as Modbus-RTU, Ethernet (also PoE), M-Bus
- All interfaces are freely programmable via the display

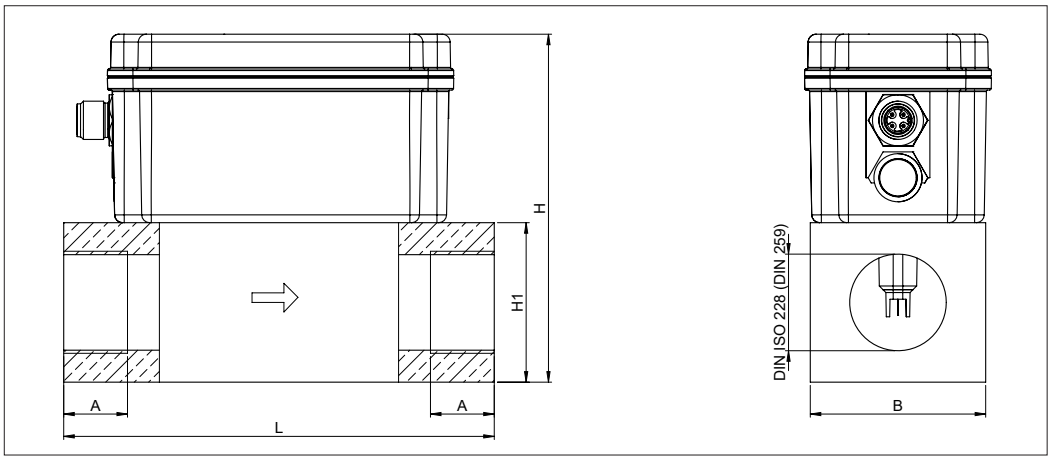

Integrated flow straightener - no inlet section necessary

With a key stroke:

- Reset counter reading
- Select units
- Parameterise interfaces

VD 500 - Flow sensor for wet compressed air

For measuring immediately downstream of the compressor in moist air up to +180 °C

FIELD OF APPLICATION:

- Measurement immediately downstream of the compressor
- Measurement at high temperatures

Benefits at a glance:

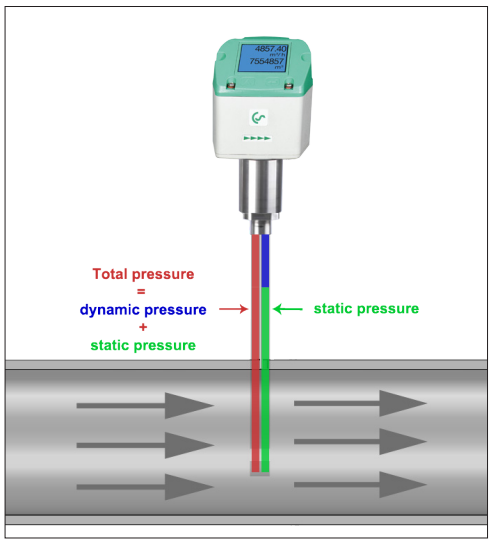

- **New**: Unique sensitivity in the lower measuring range: Measures from as little as 2 m/s and thus covers the complete operating range of variable speed drive (VSD) compressors
- Particularly suitable for extremely high flow rates
- Flow, total consumption, temperature and pressure
- Measurement at high temperatures, max. temperature 180 °C
- Can be used in pipes from DN 20 to DN 600
- Installation via 1/2″ ball valve under pressure

Typical applications:

- Measurement of the capacity of compressors
- Compressed air audits
- Efficiency measurement of compressed air systems

Installation requirements:

- After functioning water separator
- In horizontal lines (recommended) or in risers

The integrated, precise differential pressure sensor measures the differential pressure/ dynamic pressure at the sensor tip. The pressure depends on the respective gas velocity. The flow is therefore easy to determine by means of the pipe diameter.

The additional measurement of temperature and absolute pressure and calculation of the relevant density means that measuring can be carried out for various gases, a wide variety of temperatures and pressures.

TECHNICAL DATA VD 500	
Measuring range:	2 up to 224 m/s / 600 m/s (Compressed air) 0,04 to 500 mbar Differential pressure for gases
Measured medium:	Air, non-aggressive gases
Accuracy: **(m.v.: of meas. value)**	± 1.5% of m.v.
Measuring principle:	Differential pressure
Measuring span:	1:100
Response time:	t 99: < 1 sec.
Temperature of the medium:	-30 °…+180 °C
Operating pressure:	-1...+30 bar (g)
Ambient temperature:	-20 °…+70 °C
Power supply:	18…36 VDC, 5 W
Signal outputs:	As standard: RS 485 (Modbus-RTU), 4…20 mA, pulse **Optional**: Ethernet Interface (PoE), M-Bus, IO-Link

Example order code VD 500:

0690 5001_A1_B1_C1_D1_E1_G1_J1_K1_M1

VD 520 - Inline differential pressure flow sensor

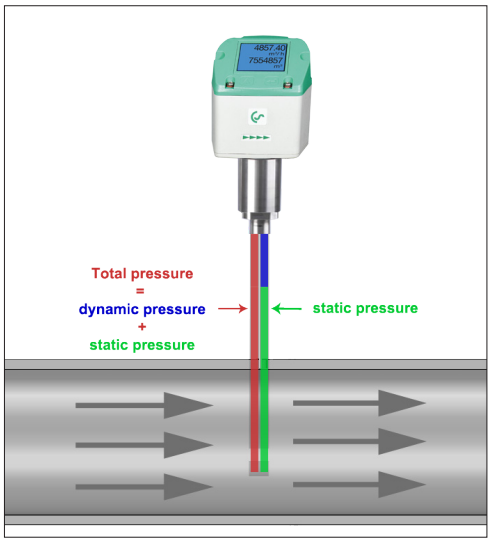

FIELD OF APPLICATION:

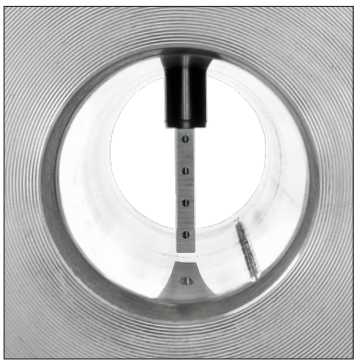

- Wet compressed air
- Technical gases
- Mixed gases: e. g. Natural gas/H2
- LPG
- Propane
- CO2

Benefits at a glance:

- Ready-to-use compact flow meter to minimize installation effort – pressure and temperature compensation integrated
- Provides flow rate, total consumption, temperature and pressure
- Differential pressure sensor element with unique sensitivity, measures highly accurate at < 2 m/s
- Large flow range with extended turn down ratio thanks to the use of measuring sections with reduced inner diameter
- Shorter inlet sections required due to the use of an averaging pitot tube
- Robust design, no moving parts
- Sensor head can be removed for calibration purpose

Averaging pitot tube

The integrated, precise differential pressure sensor measures the differential pressure/ dynamic pressure at the sensor tip. The pressure depends on the respective gas velocity. The flow is therefore easy to determine by means of the pipe diameter.

The additional measurement of temperature and absolute pressure and calculation of the relevant density means that measuring can be carried out for various gases, a wide variety of temperatures and pressures.

VD 550 - Robust flow sensor for wet compressed air and gases

FIELD OF APPLICATION:

- Wet air
- Technical gas
- Mixed gases: e.g. natural gas/H2
- LPG
- Propane
- CO2

Benefits at a glance:

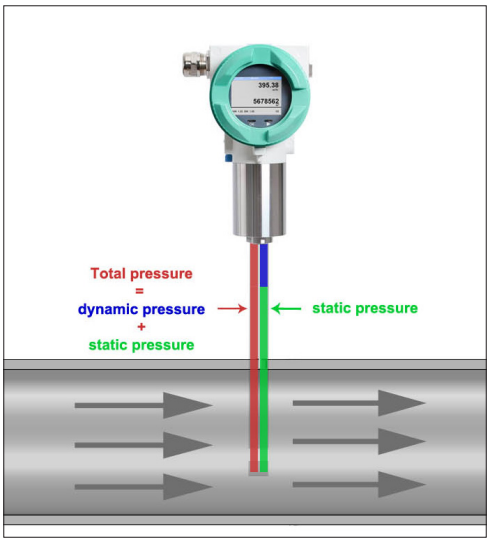

- Unique sensitivity in the lower measuring range:
  Measures from as little as 2 m/s and thus covers the complete operating range of variable speed drive (VSD) compressors
- Particularly suitable for extremely high flow rates
- Flow, total consumption, temperature and pressure
- Measurement at high temperatures, max. temperature 180 °C
- Can be used in pipes from DN 20 to DN 1500
- Installation via 1/2″ or 3/4” ball valve under pressure
- Robust impact-proof aluminum die cast housing for outdoor area IP 67

Typical applications:

- Measurement of the capacity of compressors
- Compressed air audits
- Efficiency measurement of compressed air systems
-

Typical applications:

- After a functioning water separator
- In horizontal pipes (recommended) or in riser pipes
- Installation without water separator only with 3/4” screw thread in horizontal pipes

The integrated, precise differential pressure sensor measures the differential pressure/ dynamic pressure at the sensor tip. The pressure depends on the respective gas velocity. The flow is therefore easy to determine by means of the pipe diameter.

The additional measurement of temperature and absolute pressure and calculation of the relevant density means that measuring can be carried out for various gases, a wide variety of temperatures and pressures.

Signal outputs / bus connection option	
E1	2x 4…20 mA analogue output (electrically not isolated), pulse output, RS 485 (Modbus-RTU)
E4	1x 4…20 mA analogue output (electrically not isolated), pulse output, RS 485 (Modbus-RTU)
E5	Ethernet interface (Modbus/TCP), 1 x 4…20 mA analogue output (not electrically isolated), pulse output, RS 485, (Modbus-RTU)
E6	HART protocol, 1 x 4…20 mA output (not galvanically isolated), pulse output, without RS 485 (Modbus RTU)
E8	M-Bus, 1 x 4…20 mA analogue output (not electrically isolated), pulse output, RS 485 (Modbus-RTU)
E9	Ethernet interface PoE (Power over Ethernet), (Modbus/TCP), 1 x 4…20 mA analogue output, (not electrically isolated), pulse output RS 485 (Modbus-RTU)
E10	IO-Link, 1 x 4…20 mA output (not galvanically isolated), pulse output, RS 485 (Modbus RTU)

Calibration	
F1	No real gas adjustment - gas type configuration per gas constant
F2	Real gas adjustment in the gas type selected below

Gas type	
G1	Compressed air
G2	Nitrogen (N2)
G3	Argon (Ar)
G4	Carbon dioxide (CO2)
G5	Oxygen (O2)
G6	Nitrous oxide (N2O)
G7	Natural gas (NG)
G8	Helium (He)
G9	Propane (C3H8)
G10	Methane (CH4)
G11	Biogas (Methane 50%: CO2 50%)
G12	Hydrogen (H2)
G90	Further gas / please indicate gas type (on request)
G91	Gas mixture / please indicate mixture ratio (on request)

Reference standard	
H1	20 °C, 1000 mbar
H2	0 °C, 1013,25 mbar
H3	15 °C, 981 mbar
H4	15 °C, 1013,25 mbar

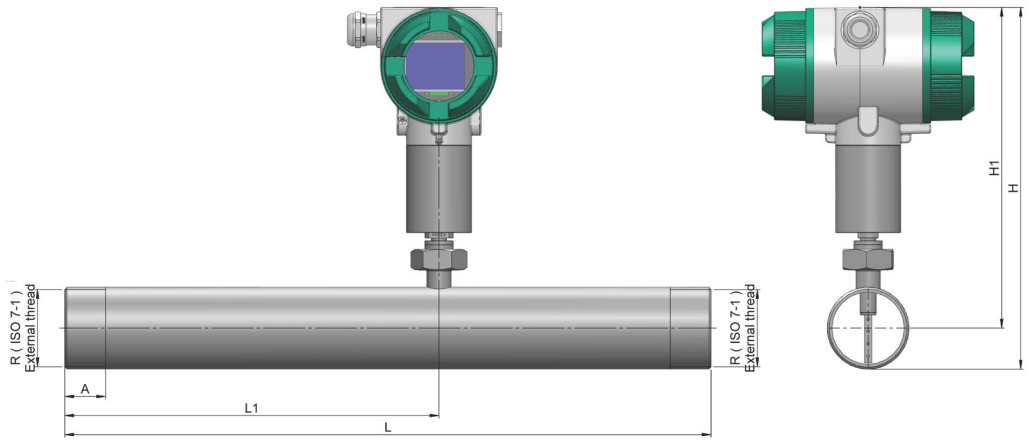

Maximum pressure	
K1	30 bar (g)
K3	2 bar (g)
K4	10 bar (g)

Surface conditon	
L1	standard version
L2	Special cleaning - oil and grease free (e. g. for oxygen applications and so on)
L3	Silicone-free version including special cleaning oil- and grease-free

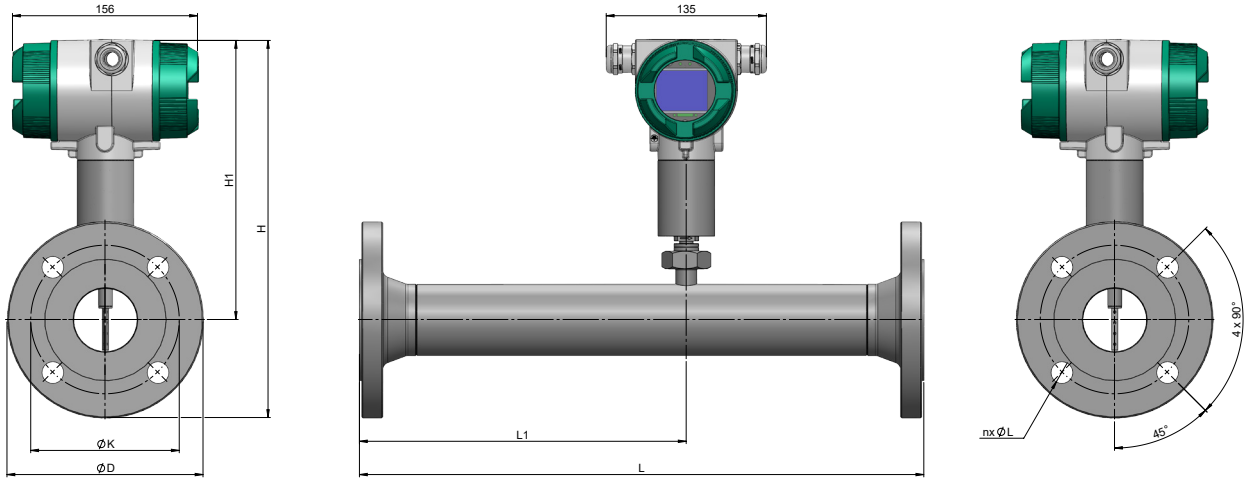

DESCRIPTION	ORDER NO.
VD 570 Inline differential pressure flow sensor	0690 0570 + Order code A_…L_
Accessories:	
ISO calibration certificate (5 calibration points) for VA sensors	3200 0001
Certificate of origin	Z695 5012
Closing cap for measuring section in aluminium	0190 0001
Closing cap for measuring section stainless steel 1.4404	0190 0002
Connection cable for probes 5 m with open ends	0553 0108
Connection cable for probes 10 m with open ends	0553 0109
Ethernet connection cable length 5 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2503
Ethernet connection cable length 10 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2504

VU 570 - Vortex ultrasonic flow sensor for technical gases and mixed gases

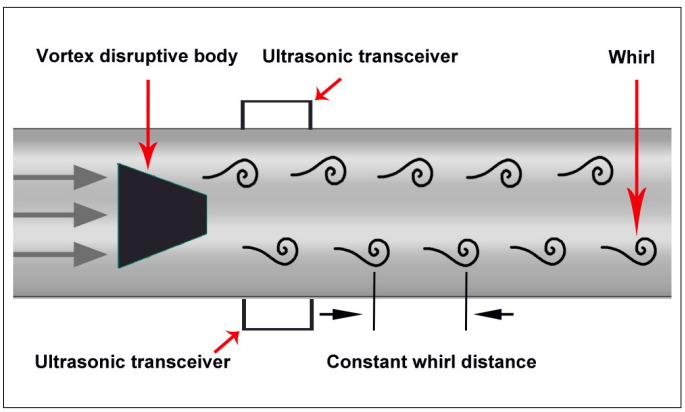

Independent from gas composition – integrated pressure and temperature compensation – larger measuring range than common Vortex sensors

FIELD OF APPLICATION:

- Technical gases
- Mixed gases
- Compressed air in PET bottles production
- LPG
- Propane
- Crypton

Function principle Vortex ultrasonic:

Benefits at a glance:

- Measurement of standard volume flow, operating volume flow, mass flow
- Suitable for unknown/changing gas compositions and mixed gases
- The innovative measuring principle grant a precise flow measurement in different gases
- Suitable for quickly changing temperature and pressure changes as well as high mass flows

Advantages towards common mechanic gas meters:

- No moving parts – no wearing

Advantages towards common Vortex sensors:

- Precise measurement already from 0.3 m/s

Example order code VU 570:
0697 0570_A1_B1_C1_D1_E1_F1_G1_H1

Measuring section	
A1	1/2“ (DN 15)
A2	3/4“ (DN 20)
A3	1“ (DN 25)
A4	1 1/4“ (DN 32)
A5	1 1/2“ (DN 40)
A6	2“ (DN 50)
A7	2 1/2“ (DN 65), (only in flanged version)
A8	3“ (DN 80), (only in flanged version)

Process connection	
B1	R outer threads
B2	NPT outer threads
B3	Flange DIN 1092-1
B4	Flange ANSI 16.5 Class 150 lbs
B5	Flange ANSI 16.5 Class 300 lbs

Option display	
C1	With integrated display
C2	Without display

Pressure sensor	
D1	16 bar (g)
D2	40 bar (g)
D3	1.5 bar (g)

Signal outputs / bus connection option	
E1	2 x 4…20 mA analogue output (galv. isolated), pulse output, RS 485 (Modbus-RTU)
E4	1 x 4…20 mA analogue output (galv. not isolated), pulse output RS 485 (Modbus-RTU)
E5	Ethernet-Interface (Modbus/TCP), 1 x 4…20 mA analogueoutput (galv. not isolated), pulse output, RS 485 (Modbus-RTU)
E8	M-Bus, 1 x 4…20 mA analogue output (galv. not isolated), pulse output RS 485 (Modbus-RTU)
E9	Ethernet-Interface PoE (Power over Ethernet) Modbus/TCP), 1 x 4…20 mA analogue output (galv. not isolated), pulse output, RS 485 (Modbus-RTU)

Calibration	
F1	No real gas calibration - Adjustment of gas type via gas constant
F2	Real gas calibration in selected gas type

Reference conditions	
G1	20 °C, 1000 mbar
G2	0 °C, 1013,25 mbar
G3	15 °C, 981 mbar
G4	15 °C, 1013,25 mbar
G5	Operation conditions

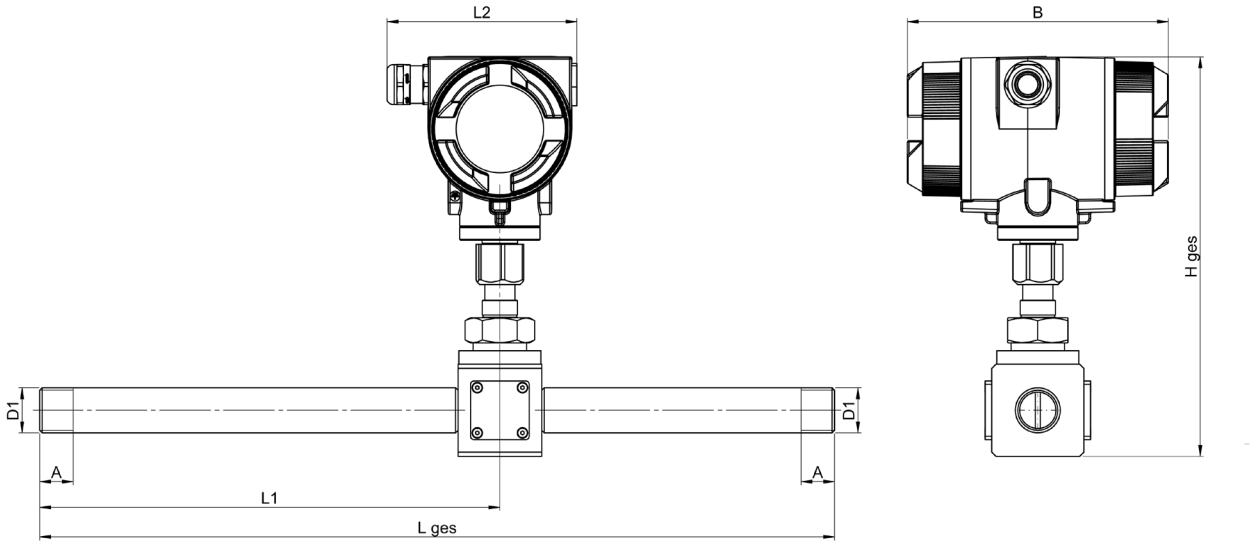

Accuracy class	
H1	± 1,5% of measured value (volume flow)
H2	± 1% of measured value (volume flow)

TECHNICAL DATA VU 570	
Measuring range:	See table
Measuring medium:	Air, non-aggressive gases and mixed gases (non-condensing)
Accuracy: **Volume flow (m³/h)**	± 1,5 % m. v., optional ± 1 % m. v.
Mass flow (kg/h) resp. Standard volume flow (Nm³/h)	± 2 % m. v., optional ± 1,5 % m. v.
Meas. principle:	Vortex ultrasonic – Vortex frequency measurement
Process temp.:	-40°…+100°C
Process pressure:	Up to 40 bar (ü)
Protection class:	IP67
Material meas. Section and medium-touching parts:	Stainless steel 316, Plastic
Material display unit:	Aluminium - Die casting
Signal outputs:	As a standard: RS 485 (Modbus-RTU), 1x 4...20 mA, puls Optional: Ethernet Interface
Power supply :	18…36 VDC
Measuring span:	1:50
Repeatability:	± 0,3 % v. M.
Process connection:	Flange DIN EN1092-1 or Flange ANSI 150 lbs - 300 lbs R 1/2“ - R 2“ (BSP Brtitish Standard Piping) 1/2“ - 2“ NPT-thread

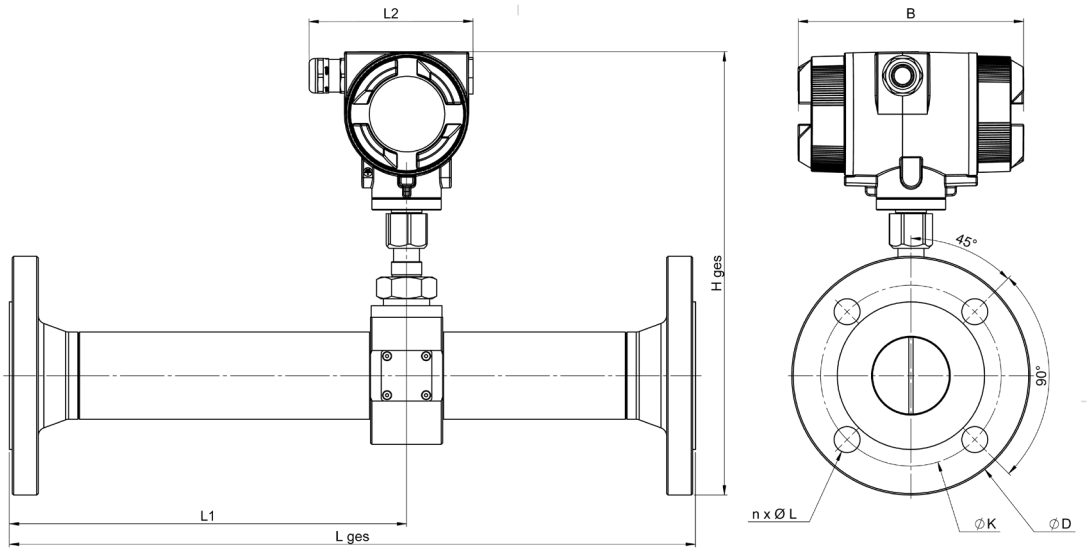

DESCRIPTION	ORDER NO.
VU 570 - Vortex ultrasonic flow sensor for technical gases and mixed gases	0697 0570+ Order code A_…H_
Further accessories:	
ISO - calibration certificate at 5 measuring points	3200 0001

Notice

VX 570 - Vortex Flow sensor for steam, gases and liquids

The high-precision all-rounder with integrated pressure and temperature compensation

FIELD OF APPLICATION:

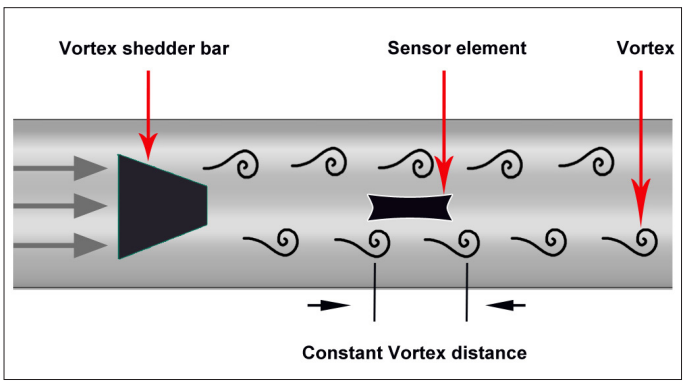

- Measurement of saturated steam or superheated steam
- Measurement of liquids
- Measurement of mixed gases
- Measurement of corrosive media

Benefits at a glance:

- Measurement of standard volume flow, operating volume flow, mass flow
- Measurement at high temperatures of up to 350°C
- Measurement up to 63 bar(g)
- Suitable for unknown/changing gas compositions and mixed gases
- Aggression resistant – all parts in contact with media made of stainless steel
- Not sensitive to vibrations due to reference vibration measurement
- No moving parts

Vortex operating principle, vortex frequency:

Example code for VX 570:

0698 0570_A1_B1_C1_D1_E1_F1_G1_H1_I1

Basic model	
A1	Vortex mass flow meter with integrated temperature and pressure sensor
A2	Vortex flow meter without integrated temperature and pressure sensor

Measured medium:	
B1	Steam
B2	Liquids
B3	Gas

Display option	
C1	With display

Measuring section	
D1	1/2“ (DN 15)
D2	3/4“ (DN 20)
D3	1“ (DN 25)
D4	1 1/4“ (DN 32)

Accessories VA 500/520/525

DESCRIPTION	ORDER NO.
Connection cable for VA/FA series, 5 m	0553 0104
Connection cable for VA/FA sensors, 10 m	0553 0105
Connection cable for VA/FA series, 20 m	0553 0120
Cable for alarm/pulse output, with M12 plug, 5 m	0553 0106
Cable for alarm/pulse output, with M12 plug, 10 m	0553 0107
Connection cable for VA/FA series, 5 m shielded	0553 0129
Connection cable for VA/FA series, 10 m shielded	0553 0130

DESCRIPTION	ORDER NO.
Ethernet connection cable, length 5 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2503
Ethernet connection cable, length 10 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2504
Ethernet connection cable, length 20 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2505

DESCRIPTION	ORDER NO.
M12 T-plug for VA 500/520 for connecting multiple sensors to an M-Bus or Modbus network	0 2000 0823

DESCRIPTION	ORDER NO.
M12 plug for VA 500/520/525	0 2000 0082
M12 plug 90° angled	0219 0060

Accessories VA 500/550

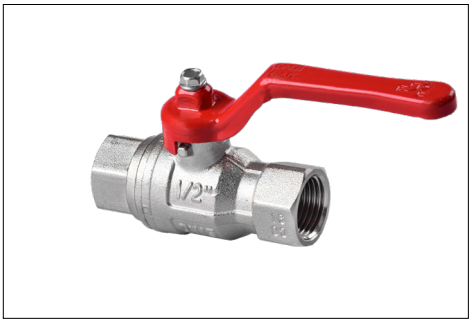

DESCRIPTION	ORDER NO.
Drilling jig incl. drill (Ø 13 mm)	0530 1108

DESCRIPTION	ORDER NO.
Wall thickness measuring device CS 0495 incl. case and calibration block	0560 0495

DESCRIPTION	ORDER NO.
Welding nipple, L = 35 mm, male thread, R 1/2" stainless steel 1.4301	3300 0006
Welding nipple, L = 35 mm, male thread, R 1/2" stainless steel 1.4571	3300 0007

DESCRIPTION	ORDER NO.
Ball valve I/I G 1/2" stainless steel	3300 0002

DESCRIPTION	ORDER NO.
High-pressure safety device for the installation of insertion sensors > 10 bar, incl. ball valve	0530 2205

Order code: 0530 2205 _A1_B1_C1_D1

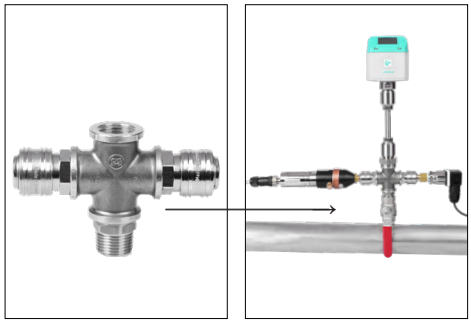

Sensor Type	
A1	VA 500 (up to 50 bar)
A2	VA 550 (up to 100 bar)
A3	VD 500 (up to 30 bar)
A4	VD 550 (up to 100 bar)

Sensor length	
B1	160 mm
B2	220 mm
B3	300 mm
B4	400 mm
B5	500 mm
B6	600 mm

Connection thread	
C1	G 1/2“
C2	NPT 1/2“

Approval	
D1	Without
D2	DVGW (up to 16 bar)

Accessories VA 500/550

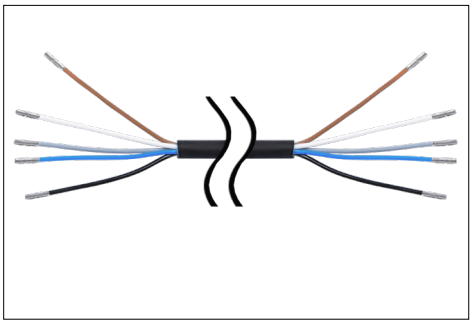

DESCRIPTION	ORDER NO.
X-connection for connection of pressure and dew point sensor at the same measuring point (incl. 2x quick-lock coupling)	0553 0133

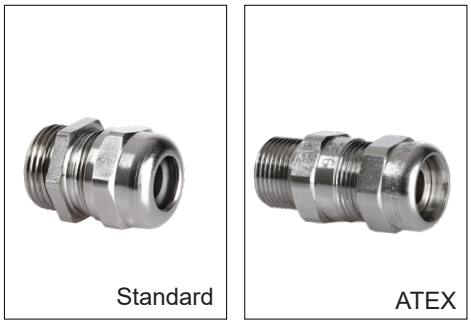

DESCRIPTION	ORDER NO.
Thread adapter G 1/2″ female thread to NPT 1/2″ male thread	0553 0134

Accessories VA 550/570

DESCRIPTION	ORDER NO.
Connection cable 5 m with open ends	0553 0108
Connection cable 10 m with open ends	0553 0109

DESCRIPTION	ORDER NO.
PNG cable screwing M20 x 1,5- for standard	0553 0552
PNG cable screwing M20 x 1,5 - for ATEX	0553 0551

Accessories VA 520/570

DESCRIPTION	ORDER NO.
Closing cap for measuring section VA 520/VA 570 (material: aluminium)	0190 0001
Closing cap for measuring section VA 520/VA 570 (material: stainless steel 1.4404)	0190 0002

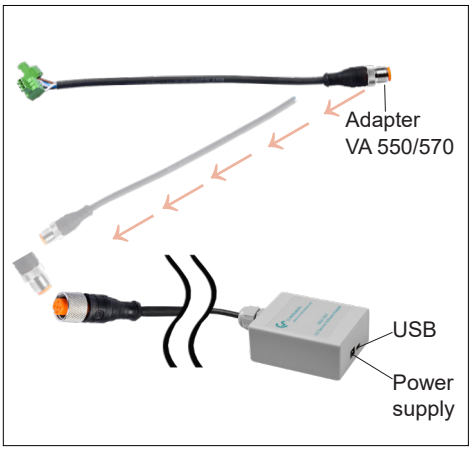

Accessories for all VA 5xx

DESCRIPTION	ORDER NO.
Mains unit in wall housing for maximum 2 sensors of the series VA/FA 5xx, 100-240 V, 23 VA, 50-60 Hz / 24 VDC, 0.35 A	0554 0110
Mains unit in wall housing for max. 4 sensors of the series VA500/520 100-240 V, 23 VA, 50-60 Hz / 24 VDC, 0,35 A	0554 0111

DESCRIPTION	ORDER NO.
AC adapter plug 100-240 VAC / 24 VDC for VA/FA 5xx	0554 0109

DESCRIPTION	ORDER NO.
CS Service Software incl. PC connection set, USB connection and interface adapter to the sensor	0554 2007

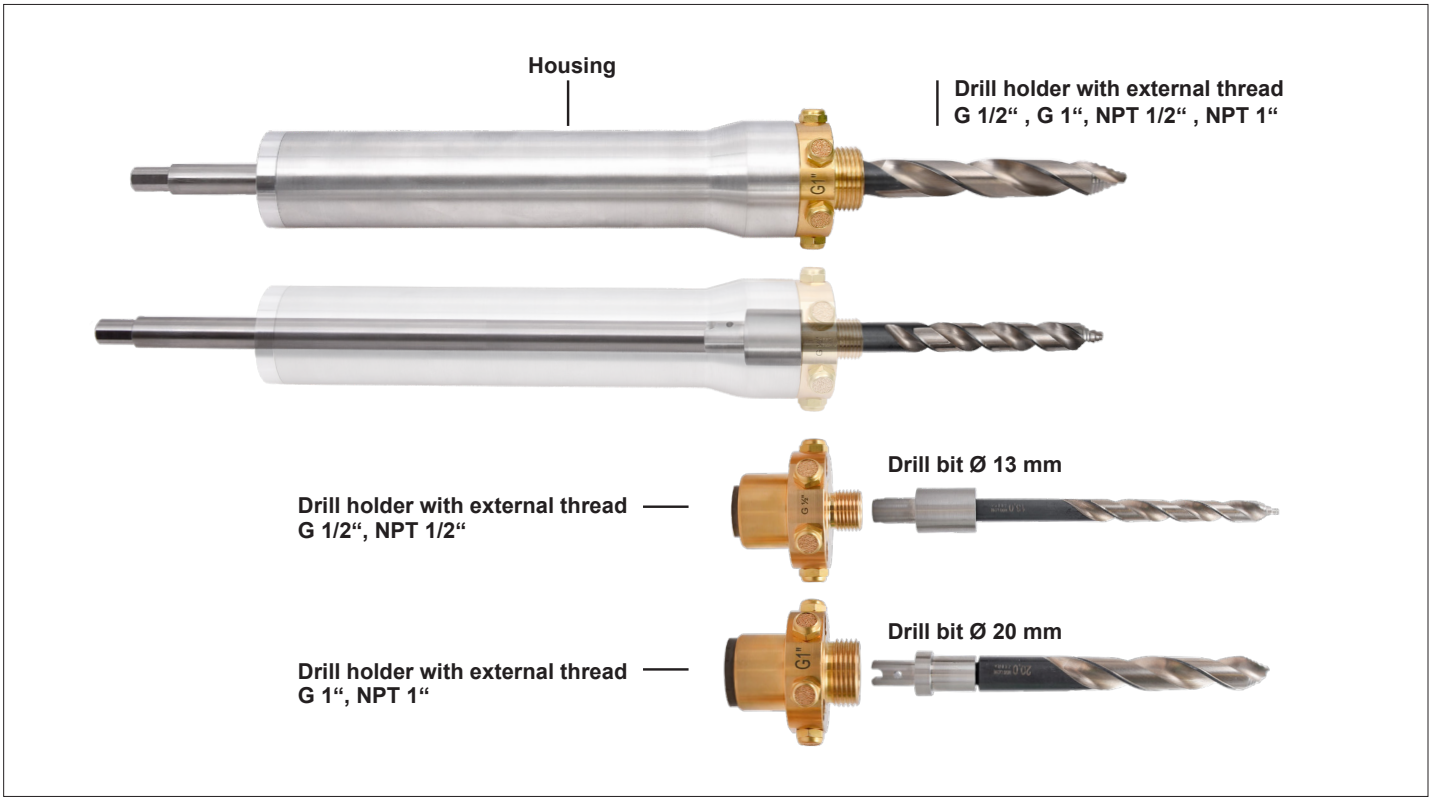

DESCRIPTION	ORDER NO.
External Gateway PROFIBUS for connection to integrated RS 485 interface	Z500 3008
External Gateway PROFINET for connection to integrated RS 485 interface	Z500 3009

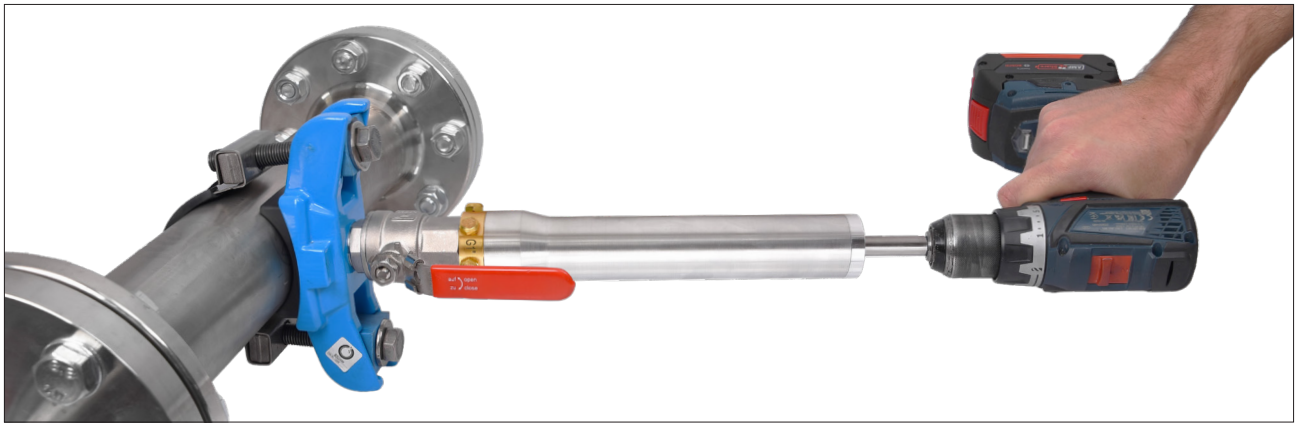

DESCRIPTION	ORDER NO.
Case for all sensors (dimensions: 500 x 360 x 120 mm)	0554 6006

Drilling device, including a drill bit, for setting up a measuring point

Ideal for tapping under pressure. Using this special tapping device, a measuring point can be set up within a few minutes after welding on a threaded spigot and fitting a ball valve. As an alternative to welding on the spigot, a tapping clamp can be used.

Sample order code:
0530 1208_A1_B1

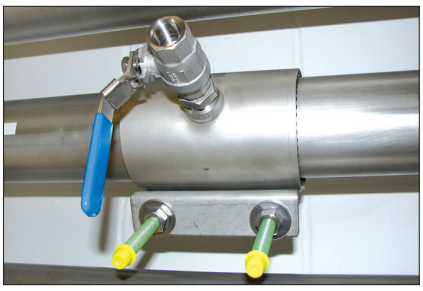

Drill holder	
A1	13 mm drill bit for 1/2“ sensor shafts
A2	20 mm drill bit for 3/4“ sensor shafts

Connection thread	
B1	G External thread
B2	NPT external thread

ACCESSORIES	ORDER NO.
DRILL HOLDER:	
Drill holder with G 1/2“ External thread	Z530 1201
Drill holder with G 1“ External thread	Z530 1202
Drill holder mit NPT 1/2“ External thread	Z530 1203
Drill holder mit NPT 1“ External thread	Z530 1204
DRILL BIT:	
13 mm drill bit for ½” sensor shafts	Z530 1205
20 mm drill bit for ¾” sensor shafts	Z530 1206

Practical hot tapping saddle accessories for compressed air lines

DESCRIPTION	DN	ORDER NO.
Spot drilling collar for pipe Ø 032 - 036 mm, length: 150 mm*		0500 0446
Spot drilling collar for pipe Ø 036 - 040 mm, length: 150 mm*		0500 0448

*incl. 1/2" ball valve
*not suitable for copper and plastic pipes
*not suitable for aluminum

If there is no measuring site with 1/2" ball valve present on existing pipes, it can be set up quickly and cost-effectively by means of hot tapping saddle. The hot tapping saddle is imposed onto the pipe and tightened via thread rods. The enveloping rubber gasket is pressure-tight up to 11 bar. By means of the drilling jig, it is possible to drill the hot tapping saddle through the 1/2" ball valve into the existing pipe.

Important: Please indicate the exact outer diameter of the existing pipe when placing the order resp. please select the suitable hot tapping saddle from the adjoining list.

Practical accessories:
Hot tapping saddle for installing insertion sensors during operation

Sample order code:
0500 0800_A1_B1_C1

A27	Ø 250 - 280 mm
A28	Ø 275 - 305 mm
A29	Ø 305 - 335 mm
	Other sizes available on request

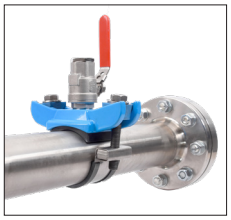

Ball valve	
B1	For sensors with ½“ screw-in thread
B2	For sensors with ¾“ screw-in thread

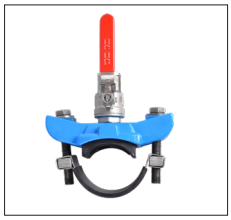

Screw-in thread	
C1	G thread
C2	NPT thread

TECHNICAL DATA HOT TAPPING SADDLE	
Material of clamp upper part:	Cast iron GJS-400, epoxy-coated
Strip material:	Stainless steel, AISI 316
Belt width:	65 mm, EPDM tape
Standard rubber seal:	NBR
System pressure:	up to 11 bar
Operating temperature:	-10 °C...+50 °C

When using a hot tapping saddle, please allow for a 100 mm longer sensor shaft.

The hot tapping saddle are not suitable for copper, aluminum, and plastic pipes.
*Only available for ½“ insertion sensors

Measuring sections for precise measurements:

Measuring section in stainless steel 1.4301 incl. ball valve, up to DN 65 (R2 1/2") with R-male thread, from DN 80 with weld neck flange in acc. with DIN 2633.

VA 409 - Flow direction switch for compressed air systems

The thermal flow direction switch VA 409 with direction indication serves for determination of the flow direction of compressed air and gases especially in closed circular pipelines.

By means of VA 409 with flow direction indication the flow direction of the compressed air can be determined quickly and safely. Compared with the former mechanical paddle flow switches VA 409 is able to detect even the smallest changes in the flow direction quickly and without any mechanical movement.

The direction information in form of a potential-free contact (normally closed max. 60 VDC, 0.5 A) is transferred to the flow meters VA 5xx or to a separate building management system (BMS). Two LEDs show the flow direction.

In connection with 2 flow sensors VA 5xx incoming and out flowing compressed air in closed circular pipelines can be measured precisely.

Special features:

- detects the smallest changes < 0.1 m/s relative to 20 °C and 1,000 mbar
- no mechanical wear parts
- easy installation under pressure

DESCRIPTION	ORDER NO.
Direction switch VA 409	0695 0409
Mains unit in wall housing for maximum 2 sensors of the series VA/FA 5xx, 100-240 V, 23 VA, 50-60 Hz / 24 VDC, 0,35 A	0554 0110
Connection cable for VA/FA series, 5 m	0553 0104
Connection cable for VA/FA sensors, 10 m	0553 0105

TECHNICAL DATA VA 409	
Response area detection of direction:	< 0.1 m/s relative to 20 °C and 1000 mbar
Measuring principle:	Calorimetric measurement
Sensor:	Pt 30/ Pt 700/ Pt 330
Measured medium:	Air, gases
Operating temperature:	0…50 °C sensor tube -20…70 °C housing
Operating pressure:	Up to 16 bar
Power supply:	24 VDC, 40 mA
Current consumption:	Max. 80 mA to 24 VDC
Protection class:	IP 54
EMC:	in acc. with DIN EN 61326
Connection:	2 x M12, 5-pin, plug A and plug B
2 potential-free contacts:	2 x U max. 60 VDC, I max 0.5 A (normally closed); on request: Normally open
Housing:	Polycarbonate
Sensor tube:	Stainless steel, 1.4301, length 160 mm, Ø 10 mm, safety ring Ø 11.5 mm, longer sensors on request
Mounting thread:	G 1/2″
Housing diameter:	65 mm
Direction indication:	2 LED`S

CS Service Software - for VA 5xx flow meters

… incl. PC connection set, USB connection and interface adapter to the sensor.

The flow meters VA 5xx can be connected to the PC, and the following settings can be made by means of the CS Service Software:

- Selection of gas type (air, CO2, N2O, N2, O2, NG, Ar, CH4)
- Selection of units for flow, speed, temperature, consumption
- Selection of units: m³/h, Nm³/h, m³/min, Nm³/min, ltr/h, Nltr/h, ltr/min, Nltr/min, ltr/s, Nltr/s, cfm, SCFM, kg/h, kg/min, kg/s
- Setting of the reference temperature, reference pressure
- Zero-point adjustment, leak flow volume suppression adjustable
- Modbus and M-Bus settings
- Scaling of the 4...20 mA analogue output
- Reading of: Version number, production date, series no., time of last calibration
- Setting of alarm limits
- Offset settings (flow offset, temperature offset)
- Reset factory settings
- Load updates onto the sensor (firmware update, language update)

DESCRIPTION	ORDER NO.
CS Service Software for FA/VA sensors incl. PC connection set, USB connection and interface adapter to the sensor	0554 2007

Calibration of flow meters

In the CS calibration laboratory for flow meters it is possible to calibrate our flow measuring instruments as well as of other manufacturers

High precision reference measuring devices guarantee an accuracy of up 0.5% of the measured value.

Hiermit bestätigen wir, dass das oben genannte Messsystem in Anlehnung an ein zertifiziertes Qualitätssicherungssystem nach DIN ISO 9001 kalibriert wurde.

We hereby confirm, that the above-mentioned measuring system was calibrated according to DIN ISO 9001 under the observation of a certified quality assurance system.

Die für die Kalibrierung verwendeten Messeinrichtungen werden regelmäßig kalibriert und sind rückführbar auf die nationalen Normale der Physikalisch Technischen Bundesanstalt (PTB) Deutschland.

The measuring installations used for calibration are regularly calibrated and are based on the national standards of the German Federal Physical and Technical Institute (PTB)

Besondere Bemerkungen / Special remarks

Der angegebene Volumenstrom bezieht sich auf die Norm: DIN 1945 / ISO 1217.
Bezugstemperatur: 20,0 °C und Bezugsdruck: 1000 mbar (hPa)
Der Innendurchmesser des Messrohres beträgt 84,9 mm. Der Systemdruck betrug 5,0 bar (rel).
Messgas: Stickstoff N_2.
The specified volumeflow is calculated for DIN 1945 / ISO 1217
with 20 °C ambient temperature and 1000 mbar (hPa) pressure
The diameter of the tube is 84,9 mm. The pressure in the ring-channel-system is 5,0 bar (rel).
Measuring gas: Nitrogen N_2

If you want to measure the consumption / flow rate of a specific gas mixture, ask us.
We can offer a real gas adjustment under process conditions on request.

Measuring compressed air consumption and saving energy

Compressed air is one of the most expensive forms of energy at all. An intelligent use of compressed air holds enormous savings potential.

Therefore a consumption measurement that can measure and record the actual compressed air consumption and even the smallest leaks quickly and reliably is very helpful.

If we talk about operating costs in compressed air systems, we are actually talking about the energy costs, Because the electricity costs make up about 70-80% of the total cost of a compressed air system.

Depending on the size of the system, this means considerable operating costs. Even in smaller systems, this may quickly add up to €10,000 to 20,000 per year. This is an amount which can be considerably reduced – even in case of well operated and maintained plants.

In case of a three shift operation with 200 kW compressor performance a bad compressed air distribution can create redundant energy costs of more than 50,000 € per year.

This mainly relates to the detection of leaks and the correct design of the compressed air lines to minimize the pressure losses.

Energy resources like electricity, water or gas are usually monitored and therefore the costs are transparent.

Contrary to compressed air, a water leak is usually found quickly due to the visi- bility of the leak and therefore is fixed immediately. Leakages in the compressed air network „blow out“ unnoticed, even on weekends and during production stops.

The compressors continue to run during this time just to maintain a constant pressure in the network. For mature compressed air networks, the leak rate can be between 25 and 35 percent.

They are the most industrious consumers working 365 days a year.

Not considered in these considerations are the costs of producing clean and dry compressed air. Refrigeration and adsorption dryers dry the air with significant operating costs, which then „blow out“ useless through leaks.

With constantly rising energy costs, these energy savings have to be implemented in order to stay competitive within the market. Potential savings can only be exploited if the consumption of individual machines or systems is known and made transparent for all.

However, often there is no knowledge about the leak ratio. In the following we show you how leakage rate can be determined easily in your company.

Formerly the simple but inaccurate container method was applied very often. A simplified determination of the leakages is possible by means of the emptying of the tank. To carry out this measurement you just need a clock and a manometer.

Furthermore you should know the storage volume of the tank as well as of the compressed air system.

For measurement first the tank and the compressed air system are set to the upper cut-out pressure value. All compressed air consumers have to be switched off. Then the compressor is switched off and there will be no compressed air feeding into the system.

Now the time T which elapses until there is a pressure drop of 1 to 2 bar due to the leakages is measured. The pressure drop between which the measurement is taking place can be selected freely.

However, in practice the described method is very time-consuming, not adequate and inaccurate due to the following reasons:

- Storage volume, distribution pipelines cannot be determined exactly
- The accuracy of the differential pressure measurement and time measurement has to be observed
- During the pressure drop, the compressed air volume cools down and therefore changes the volume flow reference value.
- An online measurement with consumption report is not possible.

This method belongs to the so-called indirect measurements, like also the method of the load and unload measurement during which the current intake is measured by means of clamp-on ammeters and calculated back to the volume flow over the technical data of the compressor.

These indirect methods are antiquated and not suitable to detect leakages in the lower measuring range.

Determination of compressed air leakages with modern flow meters

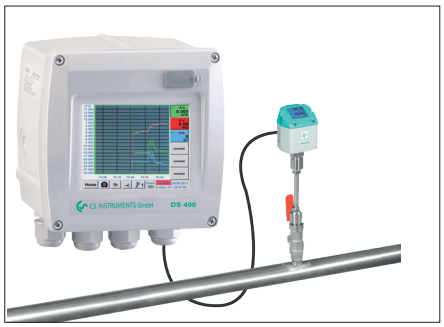

A modern compressed air consumption measurement resp. leakage measurement should be able to measure the real compressed air flow and also the smallest leakages quickly and reliably and record them.

New: Flow measurement DS 400 for compressed air and gases

Worldwide unique with 3.5 inch, graphic display with touch screen and print function.

With the new ”ready for plug-in” flow measurement DS 400 the current flow in m³/h, l/min etc. as well as the consumption in m³ or l can be measured.

The new flow station works according to the approved calorimetric measuring principle.

The heart is the flow sensor which has been proven and tested for years.

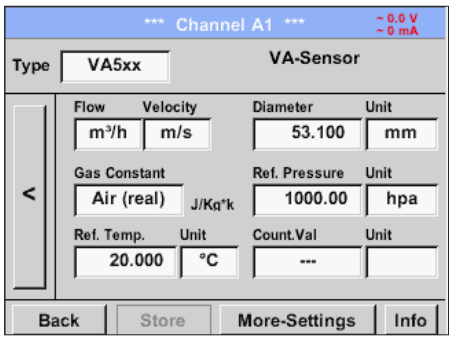

It is characterized by a new thermally more efficient sensor structure which shown a higher chip temperature in case of same electrical connection values. Compared to other calorimetric measuring instruments the sensor has a considerably lower mass and therefore a faster response time.

An additional pressure and temperature compensation is not necessary. The advantage is that the user can use the flow meters in different pressures and temperatures without any further compensation.

In addition to compressed air, other gases such as

- **nitrogen**
- **oxygen**
- **CO2**
- **argon**
- **natural gas**
- **helium**

can also be measured.

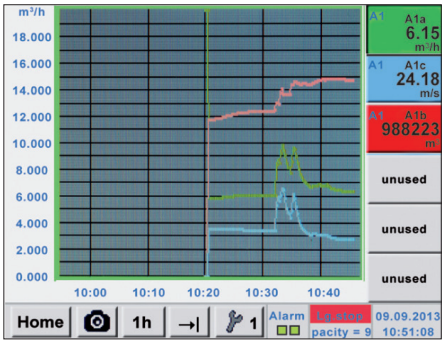

Threshold value exceedance can be reported optically and acoustically. 2 relays for pre- and main alarm are freely adjustable.

An alarm delay can be set for each relay. This grants that only really long-term threshold value exceedances are indicated.

Additionally every alarm can be reset.

The intuitive operation with the 3.5 inch touch screen graphic display with zoom function and print key is one of its kind in the world in this price class.

The graphic display with zoom function shows the actual flow, the peak values and the leakage at a glance, the values are stored in the data logger.

So the user can take a look at the stored measurement curves also without any computer at any time on site. This grants a quick and easy analysis of the compressed air or gas consumption.

With the print key, the current screen can be saved as an image file on the internal SD card or on a USB stick and can be printed out without additional software on a PC.

Ideal for documentation of the measured values/measurement curves on site. Colored measurement curves can be sent by e-mail as image files or integrated into a service report.

The internal data logger enables the storage of the measured data for several years.

The measured data can be evaluated via a USB stick of via Ethernet by means of the comfortable software CS Soft Basic.

Particularly comfortable is the consumption analysis at the touch of a button.

The CS Soft Basic automatically draws up daily, weekly and monthly reports.

Special features:

- **3.5" graphic display – easy to use with touchscreen**
- **Zoom function for accurate analysis of measured values**
- **Consumption analysis with daily/weekly/monthly reports**
- **Colored measurement curves with names**
- **Mathematical calculation function, e.g. addition of several consumers to a total consumption or energy costs per kWh/m³**
- **Print key: optional indications can be stored as image files directly on a USB stick and sent by e-mail without any software**
- **2 alarm contacts for threshold value exceedance**
- **Freely adjustable alarm delay for both alarm contacts with reset function**
- **Up to 4 sensor inputs for: additional flow meters, dew point, pressure, temperature sensors, electrical effective power meters, optional third-party sensors can be connected: Pt 100/1000, 0/4…20 mA, 0-1/10 V, Modbus, pulse**
- **Integrated data logger 8 GB**
- **USB, Ethernet interface, RS 485**
- **Web server**

Installation VA 500 under pressure

VA 500 flow meter for compressed air and gases

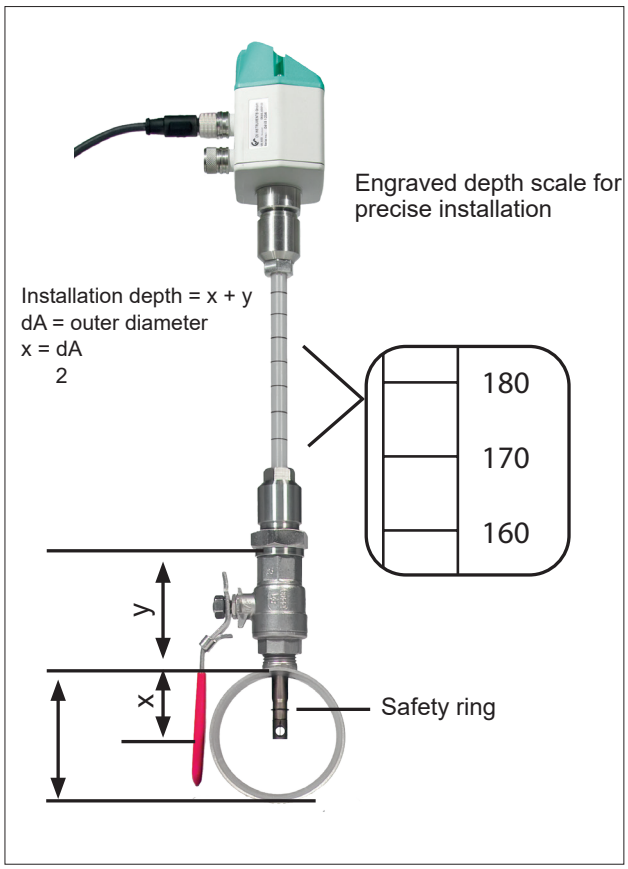

Even under pressure, the flow probe VA 500 is mounted by means of a standard 1/2" ball valve.

During mounting and dismounting the safety ring avoids an uncontrolled ejection of the probe which may be caused by the operating pressure.

For the mounting into different pipe diameters, VA 500 is available in the following probe lengths: 120, 160, 220, 300, 400 mm.

The flow probes are thus suitable for being mounted into existing pipes with diameters of 1/2" to DN 1000 upwards.

The exact positioning of the sensor in the middle of the pipe is granted by means of the engraved depth scale. The maximum mounting depth corresponds to the respective probe length.

Configuring the measuring site

If there is no suitable measuring site with 1/2" ball valve, there are two simple possibilities to set up a measuring site:

A Weld on a 1/2" screw neck and screw on a 1/2" ball valve

B Mount spot drilling collar incl. ball valve (see accessories)

By means of the drilling jig, it is possible to drill under pressure through the 1/2" ball valve into the existing pipe.

The drilling chips are collected in a filter. Then install the probe as described above.

Due to the large measuring range of the probes, even extreme requirements placed on the consumption measurement (high volume flow in small pipe diameters) can be met.

(The measuring range depends on the pipe diameter).

OIL CHECK 500

The monitoring system for permanent highly precise measurement of the vaporous residual oil content in compressed air, nitrogen and gases

In many industrial processes, compressed air comes into direct contact with the end product. If the compressed air is contaminated with oil, moisture or particles, this can have serious consequences.

While dew point monitoring is important for all production facilities to prevent corrosion in the compressed air network and machine failures, residual oil and particle measurement is widely used by manufacturers of food, pharmaceuticals, electronics and semiconductors.

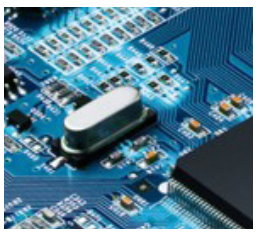

The limit values are defined in ISO 8573

ISO 8573-1:2010 Class	Solig particles			Humidity	Oil
	Number of particles per m³			Pressure dew point °C	Total share of oil (liquid aerosol and vapor)
	0,1 - 0,5 µm	0,5 - 1 µm	1 - 5 µm		mg/ m³
0	In according with specification by the devices user, stricter requirements than class 1				
1	≤ 20.000	≤ 400	≤ 10	≤ -70 °C	≤ 0,01
2	≤ 400.000	≤ 6.000	≤ 100	≤ -40 °C	≤ 0,1
3	--	≤ 90.000	≤ 1.000	≤ -20 °C	≤ 1
4	--	--	≤ 10.000	≤ +3 °C	≤ 5
5	--	--	≤ 100.000	≤ +7 °C	--
6	--	--	--	≤ +10 °C	--
7	--	--	--	--	--
8	--	--	--	--	--
9	--	--	--	--	--
x	--	--	--	--	--

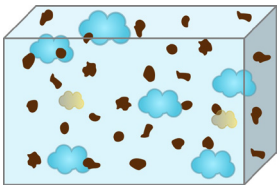

But how can residual oil get into the compressed air?

1. Intake air:

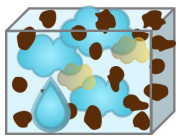

A significant amount of residual oil can enter compressed air systems through the intake air. Only in rural areas does the ambient air contain less oil vapour than defined in Class 1. In industrial areas, the intake air can be contaminated that only Class 2 or worse is achieved. Heavy goods traffic, commercial kitchens and hydrocarbon-rich exhaust air from industrial processes pollute the air accordingly.

	Average (mg/m3)	ISO class
Rural	< 0.001	1
Suburban	0.01	1
Industrial	0.01-0.03	1-2
Large city	0.01-0.10	2
Industrial area with significant hydrocarbon industry	0.1-0.2	2-3

Atmospheric

Compressed to 7 bar

2. Compressors:

Many critical applications are already covered by oil-free compressors in order to eliminate the risk of oil contamination from the compressor.

However, most oil-free compressors still use oil in their gears and bearings. If seals fail, oil vapour can enter the intake air.

In oil-injected compressors, oil is present in the compressor stage and must be separated from the compressed air using a complex oil separator cartridge. If the oil separation fails, extremely large amounts of oil enter the compressed air.

3. Filtration and treatment technology:

The appropriate filtration and treatment technology is selected depending on the specified ISO class. Filtration elements and activated carbon fillings are consumables that must be replaced regularly.

Here too, failure to observe the service intervals can lead to increased oil ingress into the compressed air system. In addition, filter elements must be precisely matched to the compressed air consumption. The filtration effect is reduced if consumption fluctuates greatly or is too low or too high.

4. Other components:

All installed systems and components that are installed after treatment, such as pipes, valves, pressure reducers, measuring technology, point of-use dryers, etc., must be selected and installed with appropriate cleanliness (oil and grease free) and care.

5. Installers and maintenance personnel:

If maintenance technicians and installers do not work carefully when adjusting the system or performing maintenance, e.g. without gloves, shortterm oil peaks can occur due to oil on their hands.

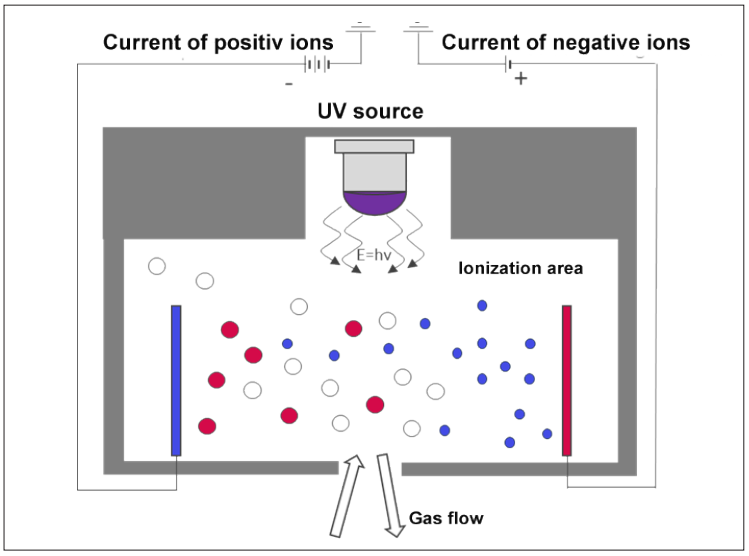

Measuring principle

Permanent Oil vapour measurement OIL CHECK 500

At the heart of the Oil Check 500 is a PID sensor (photo ionisation detector).

A partial flow of compressed air is taken from the system and fed to the PID sensor. Hydrocarbons (> C6) are ionised by a special UV lamp.

Normal components of the air (oxygen, nitrogen, carbon dioxide, argon, water vapour, etc.) are not ionised. This creates an ion current that is proportional to the concentration of the ionised molecules.

Gas temperature

ISO 8573 defines a reference temperature of 20°C for residual oil measurement.

Since modern compressed air systems can have heat recovery, it is possible that the compressed air temperature during measurement in the compressor room is below 20°C, but rises again above 20°C further back in the production process.

This can result in less oil vapour occurring in the compressor room at low temperatures than at the consumer.

The optional integrated heating element ensures a measurement temperature > 20°C. The measured value can thus be reliably calculated back to the reference temperature of 20°C.

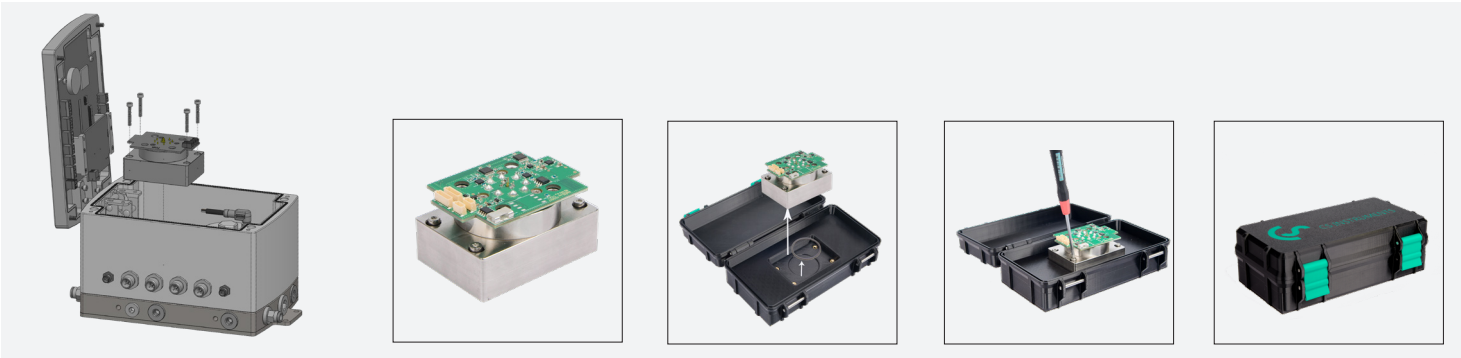

Long-term stability – service-friendly – reliable

„Forced Pressure Variation“ for long-term stable measurement results - auto-calibration

Thanks to the innovative „forced pressure variation“ measurement method, the OIL CHECK 500 generates reference gas in different mass concentrations inside the device. This method, which is protected by CS INSTRUMENTS, compensates for ageing or contamination-related components in the measurement signal, in particular long-term drift. No wear parts such as activated carbon filters are required to generate zero air. The result is low-maintenance and long-term stable measurement.

Service-friendly, no downtime

The sensor unit can be replaced by the customer on site. This eliminates the need to return the entire device for recalibration.

Process reliability

All important functions/components are monitored internally

- Supply voltage
- Sensor voltage
- Gas temperature
- Internal relative humidity
- Intensity of the light source relative to calibration (lamp intensity)
- Increased sensor sensitivity (oil vapour resolution)

Calibration

The most important factor for accurate measurement is the calibration of the measuring system.
The limit value specified in ISO 8573 for Class 1 is 0.01 mg/m³. This corresponds to a volume concentration of 2.5 ppb, which means 2.5 particles per billion.

Table 1 - Calibration points / Calibration Support Points
The high-precision, certified calibration process in the CS INSTRUMENTS laboratory enables reproducible calibration below Class 1.
Calibration at 7 additional points ensures that even high residual oil measurements can be measured reliably.

Result: The cross-check of all calibration points was within the stated specification.

OIL CHECK 500 - PERFORMANCE MEASUREMENT

(December 2024, Johannes Herbst, Fraunhofer IPM)

Schematic diagram of laboratory measurement

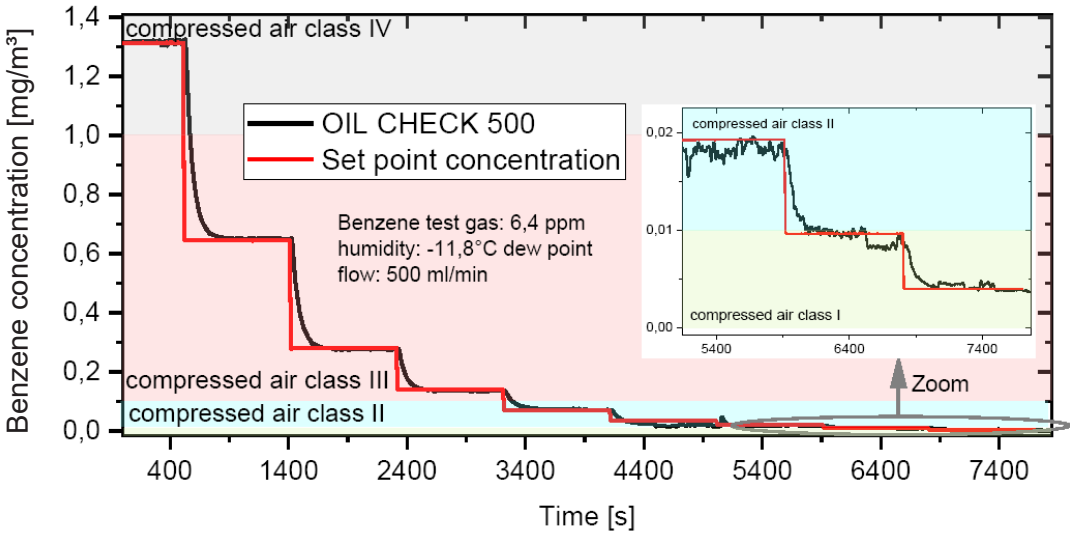

SETUP

Laboratory and conditions

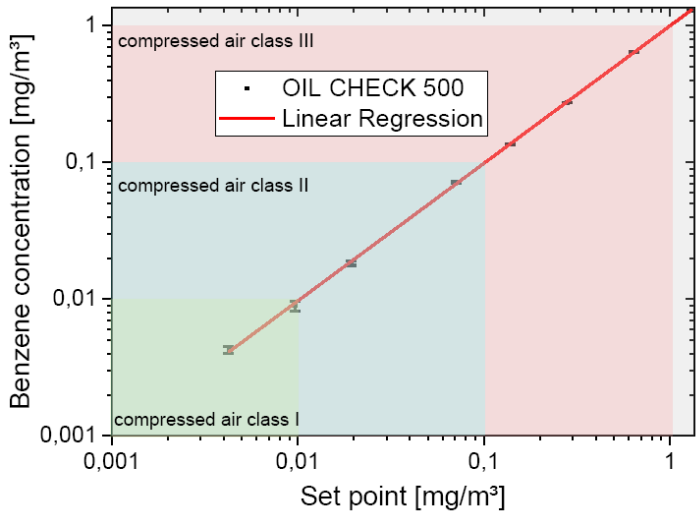

- Performance test of the OIL CHECK 500 with benzene in air in the gas laboratory of Fraunhofer IPM
- IPM Test gas cylinder: 6.4 ppm benzene in air
- Dilution of the test gas with compressed air of quality 0.004 mg/m³
- 4 l/min dry compressed air: <-80°C dew point
- Moisture supply: -11.8 °C dew point H2O
- Flow through OIL CHECK: 0.5 l/min
- Measurement at ambient pressure
- Data logging per second

Benzene measurement

- Detection limit (6σ): 0.0015 mg/m³
- With an SNR of 1.5 µg/m³, the signal sensitivity is high enough to reliably detect the transition from class I to class II at 10 µg/m³.

Linearity

Data point	Setpoint (mg/m3)	Concentration measurement (mg/m3)
1	0,0043	0,0043
2	0,0097	0,0090
3	0,0193	0,0183
4	0,0708	0,0716
5	0,1380	0,1351
6	0,2801	0,2745
7	0,6442	0,6461
8	1,3127	1,3048

- The measurement dynamics in the tested range exceeds three orders of magnitude from class I to class IV.

LABORATORY MEASUREMENT

Differences from laboratory measurement

In order to guarantee the residual oil class, many users still just take samples at regular intervals using activated carbon tubes and have them analysed in a laboratory. This procedure does not provide 100% security, as it is not a 24/7 online measurement. Any oil breakthrough cannot be detected, or is detected far too late. The user is flying blind for 12 months without any monitoring.

The user and the laboratory can also make mistakes during manual sampling and analysis:
- Sample quantity too low (flow and time), see sample calculation*
- Solvent used to remove oil components from the activated carbon is not suitable
- Temperature of the laboratory analysis too low

Advantages of OIL CHECK 500:
- Ensures 24/7 monitoring
- Fast response to oil breakthrough
- Higher sensitivity than activated carbon tubes and gas chromatographs

*Calculations for the minimum sampling period for class I/II differentiation.

Laboratories require a minimum amount of sorbed sample, typically 3µg/m³ to 5µg/m³, for the extraction of organic components from activated carbon or Tenax.

The substances absorbed in the tube are almost exclusively mixtures of various alkanes and aromatics with different molar masses and different interactions with the surface of the separation column in the gas chromatograph.

This is even a basic requirement, in order to be able to identify a kind of fingerprint consisting of several peaks over time in the chromatogram.

This means that the total amount of absorbed substances in the tube is distributed across several peaks in the chromatogram. Assuming a detection limit of approx. 5 µg/m³ per peak, at least 3 to 10 times the amount must be collected in order in order to obtain a chromatogram that exceeds the detection limit of the measuring device.

Let us assume that approx. 50 µg of oil vapours need to be collected:

Typical volume flow during sampling using activated carbon or Tenax tubes: 0.5 l/min Typical concentration of organic substances for a low Class II reading: 20 µg/m³ (0.02 mg/m³).

To collect 50 µg for clear detection, 50/20= 2.5 m³ of homogeneously contaminated compressed air is therefore required. At 0.5 l/min, this results in a minimum sampling time of 5000 min or 83.33 hours or 3 days and 11 hours.

In order to detect average oil vapour concentrations below 0.020 mg/m³, the sampling period must be correspondingly longer, so to determine whether ISO Class I (<0.01 mg/m³) is complied with, the sample should be flowed through for at least 7 to 9 days.

If this sampling duration is not observed, the laboratories will always conclude that the compressed air in the sample is ISO Class I due to their detection limit.

Notizen

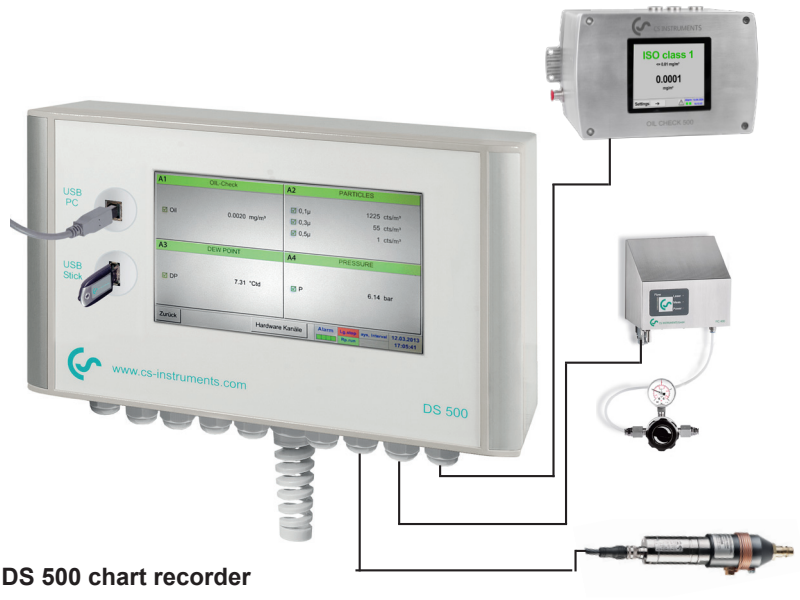

OIL CHECK 500 - Stationary solution

DESCRIPTION	ORDER NO.
OIL CHECK 500 – Residual oil measurement of the vapour-phase oil content from 0.001 to 5 mg/m³, 3 to 9 bar. Highly accurate PID sensor, innovative “forced pressure variation” measuring method, with integrated display, 4...20 mA analogue output and Modbus RTU digital interface, incl. calibration certificate.	0699 0080
Options: Integrated heating element for the stationary Oil Check 500. Keeps the gas temperature constantly above 20°C. Recommended for installations where the room temperature may fall below 20°C	Z699 0078
Additional calibration curve for measurement in 100% N2	Z699 0181
Additional calibration curve for measurement in 100% CO2	Z699 0179
Additional calibration curve for measurement in other gases (please specify gas)	Z699 0180
2x 4...20 mA analogue output (electrically isolated)	Z699 0178
External alarm unit, wired ready to plug in, for direct connection to the OIL CHECK 500 with 5 m cable (buzzer and continuous red light)	Z699 0077
Sampling system OIL-Check 500: Sampling system consisting of ½“ ball valve (oil- and grease-free), 1 m stainless steel tube 6x1 mm (oil- and grease-free), cutting ring screw connection (oil- and grease-free)	Z699 0175
Alternatively: Mobile sampling system consisting of 2 m PTFE hose, quick coupling (oil and grease free)	Z699 0174
Options for 9 bar systems> : Single-stage Pressure reducer (oil and grease free), inlet pressure max. 300 bar, outlet pressure up 1 to 6 bar	Z699 0076
For systems with pressure of 1...3 bar (g)	Z699 0182
DS 500 – intelligent chart recorder in basic version (4 sensor inputs)	0500 5000
Connection cable for probes, 5 m with open ends	0553 0104
CS Basic - data evaluation in graphic and table form - readout of the measured data via USB or Ethernet. License for 2 working places	0554 8040

SERVICE / RECALIBRATION	ORDER NO.
Pre-calibrated sensor unit for the OIL CHECK 500, incl. certificate	0699 8080
Recalibration of OIL CHECK 500 or sensor unit, including certificate	0699 3405
Initial calibration of OIL CHECK 500 with as-found data	9999 3501
Loan device OIL CHECK 500 for the duration of the calibration 0699	0699 3930

Measure compressed air quality according to ISO 8573
Residual oil - particles - residual moisture

DS 500 chart recorder

Residual oil content measurement – OIL CHECK 500

For permanent and highly precise mea-surement of the vaporous oil content from 0.001 mg/m³ to 5 mg/m³. Due to the low detection limit of 0.001 mg/m³, the compressed air quality class 1 (ISO 8573) can be monitored.

Particle counter PC 400

The highly precise, optical particle counter PC 400 measures particles from a size of 0.1 µm and is therefore suitable for monitoring the compressed air qual-ity class 1 (ISO 8573).

Moisture – dew point sensor FA 510

FA 510 measures the pressure dew point down to -80 °Ctd. Also in this case the continuous measurement takes care that alert is triggered immediately if the compressed air dryer breaks down.

DESCRIPTION	ORDER NO.

FA 510 Dew point sensor, -80°…+20 °Ctd with integrated pressure sensor	0699 0510
Standard measuring chamber	0699 3390

OIL CHECK 500 - Mobile solution

DESCRIPTION	ORDER NO.
OIL CHECK 500 mobile – residual oil measurement of the vapour-phase oil content from 0.001 to 5 mg/m³, 3 to 9 bar. Highly accurate PID sensor, innovative “forced pressure variation” measuring method, with integrated display, 4...20 mA analogue output and Modbus RTU, Integrated heating element for fast start-up at cold ambient temperatures, digital interface, including calibration certificate, in a robust hard case. Connection cable ODU/ODU, 5 m	0699 0081
Options: Additional calibration curve for measurement in 100% N2	Z699 0181
Additional calibration curve for measurement in 100% CO2	Z699 0179
Additional calibration curve for measurement in other gases (please specify gas)	Z699 0180
Alternative: Mobile sampling system consisting of 2 m PTFE hose, quick coupling (oil and grease free)	Z699 0174
DS 500 mobile – intelligent chart recorder with 4 sensor inputs	0500 5012
CS Basic – data evaluation in graphical and tabular form – reading of measurement data via USB or Ethernet. Licence for 2 workstations	0554 8040

MEASUREMENT IN GASES

In addition to measurement in compressed air, there are solutions for residual oil measurement in gases such as CO2, N2, H2, He, etc. In our in-house laboratory, we offer real gas calibrations in the desired gases. We also offer gas mixers (mixture with pure N2) to make various gases measurable.

Gas mixing system

For evaluation of gases such as:

- H2
- He
- Ar

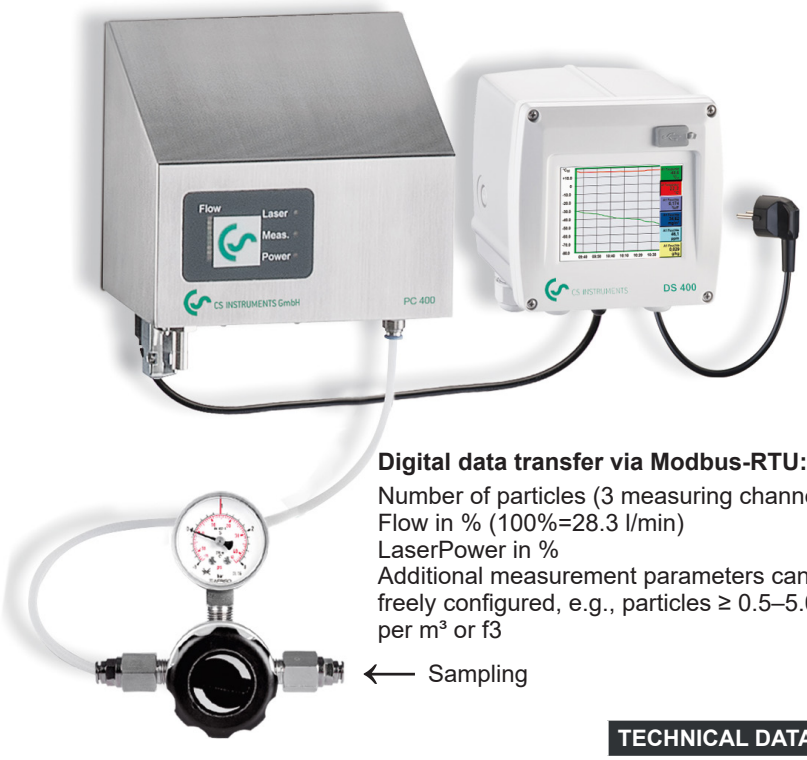

DESCRIPTION	ORDER NO.
Gas mixing system for the OIL CHECK 500 for determining residual oil in special gases, consisting of: - 2 mass flow controllers with stored setpoint - Pressure reducer to ensure the same pressure level at the inlet of the OIL CHECK 500 - Mounted on an aluminium plate for wall mounting - Fully electrically wired and gas-hose connected	Z699 0200

Application: Measurement in the compressor room - OIL CHECK 500- DS 500 - PC 400

TECHNICAL DATA OIL CHECK 500	
Measured medium:	Compressed air, nitrogen, (free from aggressive, corrosive, acid, toxic, flammable and oxidising components). Further gases on request
Measuring unit:	Residual oil content in mg oil/norm m³ referred to 1.0 bar [abs], +20 °C, 0% relative humidity, in accordance with ISO 8573-1
Identifiable substances:	Hydrocarbons, functional hydrocarbons, aromatic hydrocarbons
Field of application:	After activated carbon filter, after activated carbon adsorber, after oil-free compressor, always with connected upstream filtration and dryer
Ambient temperature:	+20 °C… +45 °C, rel. humidity <= 80% without condensation
Media temperature:	+20 °C… +45 °C (Short-term +70 °C)
Operational overpressure:	3…9 bar, optional pressure reducer connected upstream for up to 300 bar
Humidity of measured gas:	<= 40% rel. humidity, pressure dew point max. +10 °C, non-condensable humidity
Compressed air connection:	G 1/4″ female thread according to ISO 228-1
Measured values:	mg/norm m³, pressure and temperature compensated residual oil vapour content
Measuring range:	0,001…5 mg/m³ (higher measuring ranges on request)
Detection limit (residual oil):	0,001 mg/m³
Flow of measuring gas:	approx. 0,5 norm litres/minute, referred to to 1.0 bar [abs] and + 20 °C, (atmospheric conditions)
Plug-in power supply	100…240 VAC / 1 Ph. / PE / 50…60 Hz / ± 10%
Outputs	**Digital output:** RS 485 interface (Modbus RTU), Ethernet via DS 400 / 500 **Analogue output:** 4…20 mA (electrically isolated) **Alarm**: 2 alarm relays for external alarm unit, alarm values freely adjustable **Optional:** 2x 4...20 mA analogue output (electrically isolated)
Operating hours counter:	integrated
Dimensions (mm):	200 x 130 x 120 (W x H x D)
Weight:	approx. 7 kg

Particle counter PC 400 and DS 400

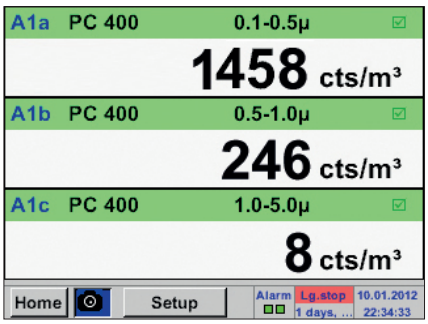

Digital data transfer via Modbus-RTU:
Number of particles (3 measuring channels)
Flow in % (100%=28.3 l/min)
LaserPower in %
Additional measurement parameters can be freely configured, e.g., particles ≥ 0.5–5.0 µm per m³ or f3

← Sampling

The DS 400 shows all 3 measuring channels according to ISO 8573-1

Particle size 0.1…0.5 µm: Number or particles per m³
Particle size 0.5…1.0 µm: Number or particles per m³
Particle size 1.0…5.0 µm: Number or particles per m³
ISO 14644-1:
≥ 0,1 - 0,2 - 0,3 - 0,5 - 1.0 - 5,0 µm per m3 or f3
EU GMP Annex 1:
≥ 0.5–5.0 µm per m³ or f³
Depending on the standard, the particles can be evaluated cumulatively or by size distribution

Advantages at a glance:

- Highly precise, optical laser particle counter for use in compressed air and technical gases
- Highly precise optics for detecting the smallest particles up to 0.1 µm and therefore suitable for monitoring the compressed air class 1 according to ISO 8573-1
- The flow rate of 28.3 l/min (1 cfm) is 10 times higher than that of the particle counters generally available on the market (usually 2.83 l/min). Advantage: Counts the smallest particles with high counting accuracy at the same time
- Due to the digital data transfer (Modbus-RTU) to the chart recorders DS 400 or DS 500, the measured values can be transferred at the same time (without any faults due to check sum)
- The class 1 filter which is included in the scope of delivery can be used for Zero count at any time. Contaminations on the optics can therefore be quickly detected or eliminated.

Advantages of the DS 400

- Data logger for long-term monitoring
- Display shows trend curves (online and history curves available)
- Zoom function directly on the touch screen
- Integrated Ethernet interface (Modbus/TCP) and RS 485 interface (Modbus-RTU) for data transfer to superordinate controls
- 2 alarm relays (changeover contact 230 VAC, 3A) – threshold values freely adjustable
- Easy operation via 3.5" touchscreen

TECHNICAL DATA PC 400

Measured medium:	Compressed air (free from aggressive, corrosive, acid, toxic, flammable and oxidising components) as well as gas types like N2, O2, CO2. Further gas types on request
Field of application:	In case of compressed air after filtration In case of gases / pure gases also without filtration
Parameter:	Number of particles per m³ (relative to expanded air: 20 °C, 1000 hPa) Size channels for the PC 400 0.1 µm: Particle size 0.1…0.5 µm: Number or particles per m³ Particle size 0.5…1.0 µm: Number or particles per m³ Particle size 1.0…5.0 µm: Number or particles per m³ ≥0,1 ≥0,2 ≥0,3 ≥0,5 ≥0,7 ≥1,0 ≥2,0 ≥5,0 µm Size channels for the PC 400 0.3 µm: Particle size 0.3…0.5 µm: Number or particles per m³ Particle size 0.5…1.0 µm: Number or particles per m³ Particle size 1.0…5.0 µm: Number or particles per m³ ≥0,3 ≥0,5 ≥0,7 ≥1,0 ≥1,5 ≥2,0 ≥3,0 ≥5,0 µm
Operating pressure:	Max. input pressure on the pressure reducer: 40 bar
Humidity of measured gas:	<= 90% rel. humidity, pressure dew point max. 10 °C, non-condensable humidity
Ambient temparature:	5...40 °C
Temperature of the measured medium:	0...40 °C
Compressed air connection:	6 mm PTFE-hose incl. quick coupling
Flow rate:	28.3 l/min (1 cfm)
Interface:	RS 485 (Modbus-RTU)
Light source:	Laser diode
Power supply:	24 VDC, 300 mA
Dimensions:	150 x 200 x 300 mm
Weight:	4 kg
Housing:	Stainless steel

Stationary solution with particle counter PC 400 and DS 400

DESCRIPTION	ORDER NO.
PC 400 particle counter up to 0.1 µm for compressed air and gases, incl. pressure reducer and calibration certificate	0699 0040
Connection cable for probes 5 m, with open ends	0553 0104
DS 400 chart recorder with graphic display and touch screen operation	0500 4000 D
Option:	
Integrated data logger for 100 million measured values	Z500 4002
Integrated Ethernet and RS 485 interface	Z500 4004
CS Basic - data evaluation in graphic and table form - readout of the measured data via USB or Ethernet. License for 2 working places	0554 8040
As an alternative to PC 400 up to 0.1 µm: PC 400 particle counter up to 0.3 µm for compressed air and gases, incl. pressure reducer and calibration certificate	0699 0041

Mobile solution with particle counter PC 400 in a service case and DS 500 mobile

DESCRIPTION	ORDER NO.
PC 400 particle counter up to 0.1 µm for compressed air and gases incl. pressure reducer and calibration certificate in a service case	0699 0042
Connection cable to portable devices, ODU/ M12, 5 m	0553 1503
Chart recorder DS 500 mobile, 4 sensor inputs	0500 5012
CS Basic - data evaluation in graphic and table form - readout of the measured data via USB or Ethernet. License for 2 working places	0554 8040
As an alternative to PC 400 up to 0.1 µm:	
PC 400 particle counter up to 0.3 µm for compressed air and gases incl. pressure reducer and calibration certificate in a service case	0699 0043

Re-calibration and accessories particle counter PC 400

Re-calibration particle counter PC 400 incl. certificate	0699 3304
CS Service Software incl. PC connection set for PC 400	0554 2009

LC 600 LeakCam - The new generation of the leak detectors

CS INSTRUMENTS has been a leading global manufacturer of measurement technology for compressed air and gases for more than 20 years. Many years of feedback and experience from several thousand satisfied customers of the previous 300/400/450/500 series leak detectors have been incorporated into the development and research of the LeakCam 600.

Unlike many other manufacturers, CS INSTRUMENTS also has calibration stands and flow meters for precise consumption measurement and leakage measurement of compressed air and gases. This know-how, coupled with over 20 years of experience in the development of leak detectors, has gone into the development of the LeakCam 600.

During development, particular attention was paid to practicality and user-friendliness. What does it really mean for the service technician or maintenance engineer to search for and document gas leaks and compressed air leaks in the production process with a leakage camera in their hand for 8 hours, for example?

Unlike many other leakage cameras, the LC 600 was developed with these points in mind, such as:

- The unique integrated laser distance measurement automatically calculates the distance to the leak. There is no need for time-consuming and incorrect distance measurement as with other devices. Precise measurement of the distance to the leak is the most important parameter for accurate leakage calculation.
- Special camera module for wide-angle view, allowing the user to quickly gain an overview of larger rooms
- LED for illuminating dark rooms
- Carrying strap, included
- Battery replacement concept

Features

5" Touchscreen Display
1280 x 720 Pixel for precise leak localizationLeckage

Cost Quantification
Identifies critical leaks for efficient resource allocation and savings
Shows the leakage rate in l/min and costs in €

Neck Strap Loops
Comfortable and easy handling

Grip for One-Handes Operation
Leaving the other hand for the touchscreen

18 V Einhell Power X-Change
Two batteries with an external charger for up to 8 hours of use

64 MEMS Microphones (2 - 130 kHz)
Detects minor leaks from up to 10 meters

13 Megapixel Camera
High-resolution images for clear leak documentation

Laser Distance Module
Precise ultrasound focusing and leak rate estimation

5 LEDs & Ambient Light Sensor
Enhance image quality in dark environments

POWER BEAM FORMING

“Power Beam Forming” sets new standards in leak detection

Cost and CO2 savings - but also safety aspects - are the driving forces behind leak detection in gas, compressed air or vacuum applications. With the LC 600 in combination with an ultrasonic transmitter, leak tests can also be carried out reliably.

The LeakCam 600 only requires 64 microphones for these tasks and achieves unique dynamics and sensitivity. This means that even very small leaks can be made visible in the presence of large, dominant ultrasonic sources. Dominant sources can be larger leaks, but also disturbing noises - caused by production machines.

Advantages of Power Beam Forming at a glance:

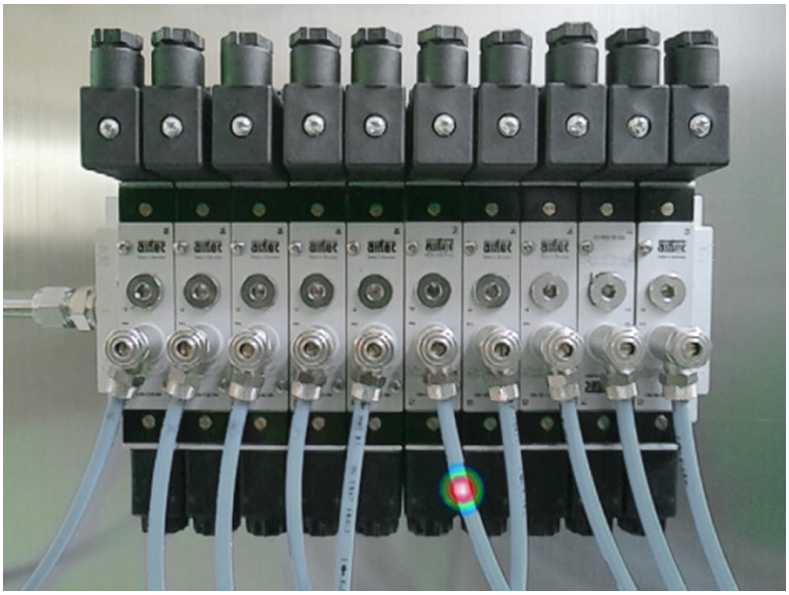

Reliability due to unique dynamics - small leaks are no longer overlooked in the presence of large leaks.
Even faster work: One look with the LeakCam 600 covers an approx. 50% larger area more reliably than competitor products.

How does an acoustic/ultrasonic camera for leak detection work?

Acoustic and ultrasonic cameras have several microphones whose signals are bundled by beamforming algorithms to make sound sources visible in the camera’s field of view. The selectable frequency range of the devices depends on the microphones used and their arrangement.

For leak detection of pressurized gases, the ultrasonic range around 40 kHz is typically used, as this is where the characteristic noises of gas leaks are best detected. Acoustic noises are completely filtered out so that leaks can be detected efficiently even in noisy production environments.

Threefold better leak detection through Power Beam Forming

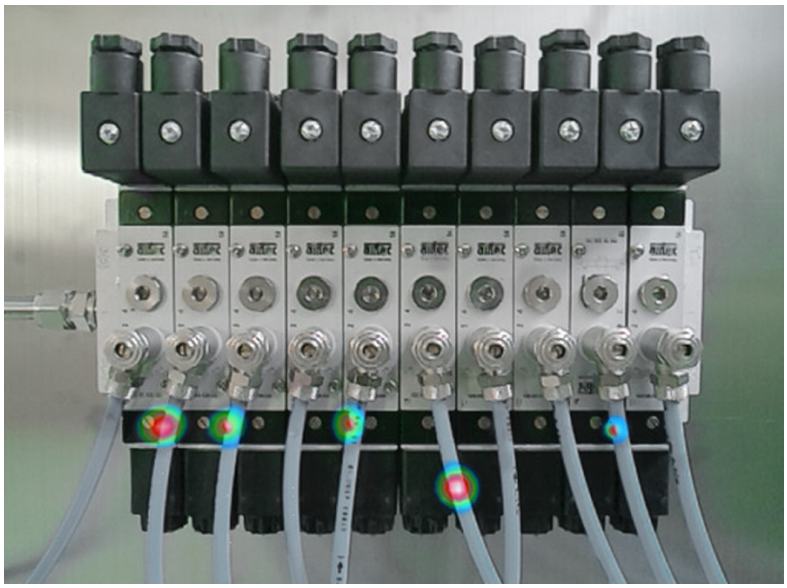

(Standard Beam Forming)

There are various beamforming methods, with standard beamforming being used in the ultrasonic cameras currently available, as it is relatively simple and does not require much computing power.

However, the dynamic range is limited to around 3 dB, which means that only the loudest leakage is detected, while quieter noises are overlooked.

The dynamic range therefore describes how much the volume of the sound sources may differ so that they can be reliably detected

LeakCam 600 with 64 microphones (Power Beam Forming)

The LeakCam uses the **Power Beam Forming**, which achieves a unique **dynamic range of 12 dB**. With Power Beam Forming, multiple sound sources can be detected simultaneously, even if they are at different sound levels

Thanks to the higher dynamic range, quieter ultrasonic noises can be detected in environments with ultrasonic interference signals, making it much easier to find leaks in automated systems or the compressor room.

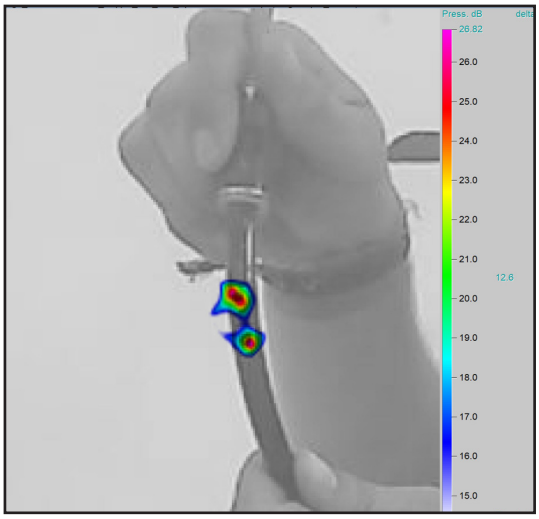

Power Beam Forming can therefore be used to search areas from a greater distance without overlooking “weaker” leaks!

Precision

Wide Microphone Spacing for Precise Leak Detection from Near to Far

The 20 cm microphone spacing of the LeakCam – measured as the diameter between the outermost microphones – ensures maximum precision in leak detection. In close range, it allows for pinpoint localization of even the smallest leaks, while in long-range applications, it provides reliable detection over greater distances. For enhanced focusing, the integrated laser distance module can be used. This ensures the LeakCam delivers clear and precise results – regardless of the distance to the leak.

Precise leak detection from far distances with acoustic zoom

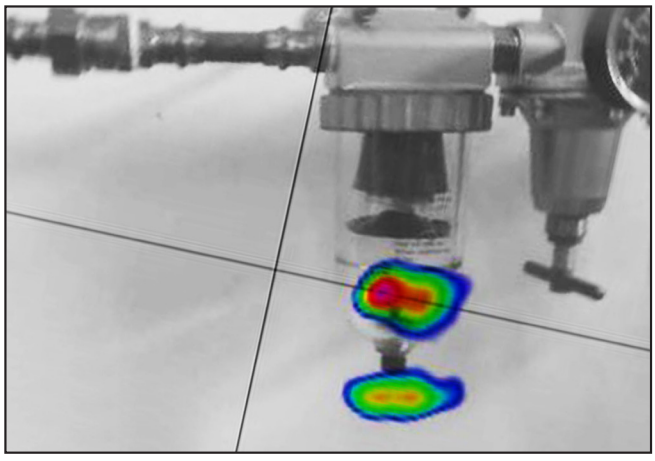

With the “acoustic zoom” of the LeakCam 600, leaks can be precisely localized from far distances by focusing ultrasonic noises even more strongly. In combination with the optical zoom (x2, x4, x8), this gives you a clear visual magnification of the inspected components. This allows you to detect leaks quickly and accurately - even in areas that are difficult to access

Highest precision even at close range - LeakCam 600 for distances from 10 cm

The LeakCam enables extremely precise leak detection at close ranges from 10cm and above due to the maximum transit time differences between the microphones and the ultrasonic source. Since the ultrasonic intensity increases with decreasing distance to the leak, smaller leaks can be found. This ensures a particularly precise coloration of the ultrasonic image, so that you can clearly distinguish between a leaking thread and a damaged coupling in the case of a quick coupling. This allows the cause of the leak to be determined quickly and precisely, even with the smallest defects.

Application

Application Pneumatics

Particularly in the field of pneumatics, several leaks can often be found in the smallest of spaces. Thanks to Power Beam Forming, you can see all leaks at a glance. Small leaks are no longer overlooked in the presence of large leaks. The device therefore offers unique reliability and time savings.

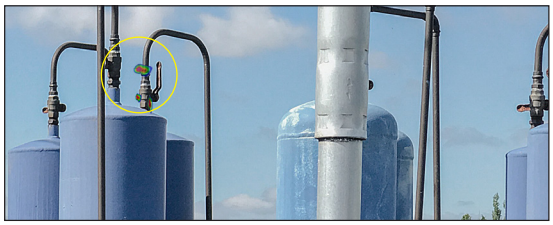

Application technical Gases

In addition to compressed air, the LC 600 is used for a wide range of technical gases such as nitrogen, argon, carbon dioxide, helium or hydrogen. Leaks can be detected with pinpoint accuracy even from great distances. This is ensured by a very high sensitivity and the optical zoom, among other things.

Application Flammable Gases

The device works from the lowest system pressures of around 250 mbar and detects leaks even from a greater distance than conventional gas sniffers. Gases such as natural gas, methane, propane or biogas can be covered.

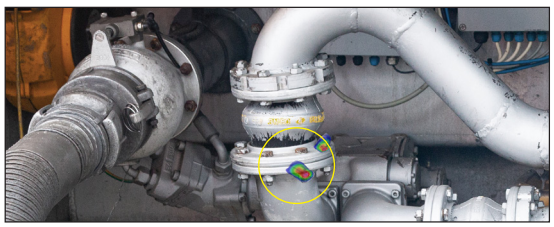

Application Refrigerant Systems

Ammonia and CO2 refrigerant systems where only the smallest leaks are tolerated can be tested with the LC600. Thanks to its unique sensitivity and range, even large systems can be checked effortlessly.

Application Discharge / Corona Effect

The LC 600 can detect partial discharges even in noisy environments and from a distance of up to 120 meters. Large area scanning and non-contact measurement save time compared to other methods.

Application Vacuum

Unlike compressed air leaks, where the sound generated by the leak is emitted into the environment, the sound generated by vacuum leaks enters the vacuum system. The LC 600 finds leaks here too thanks to its unparalleled sensitivity.

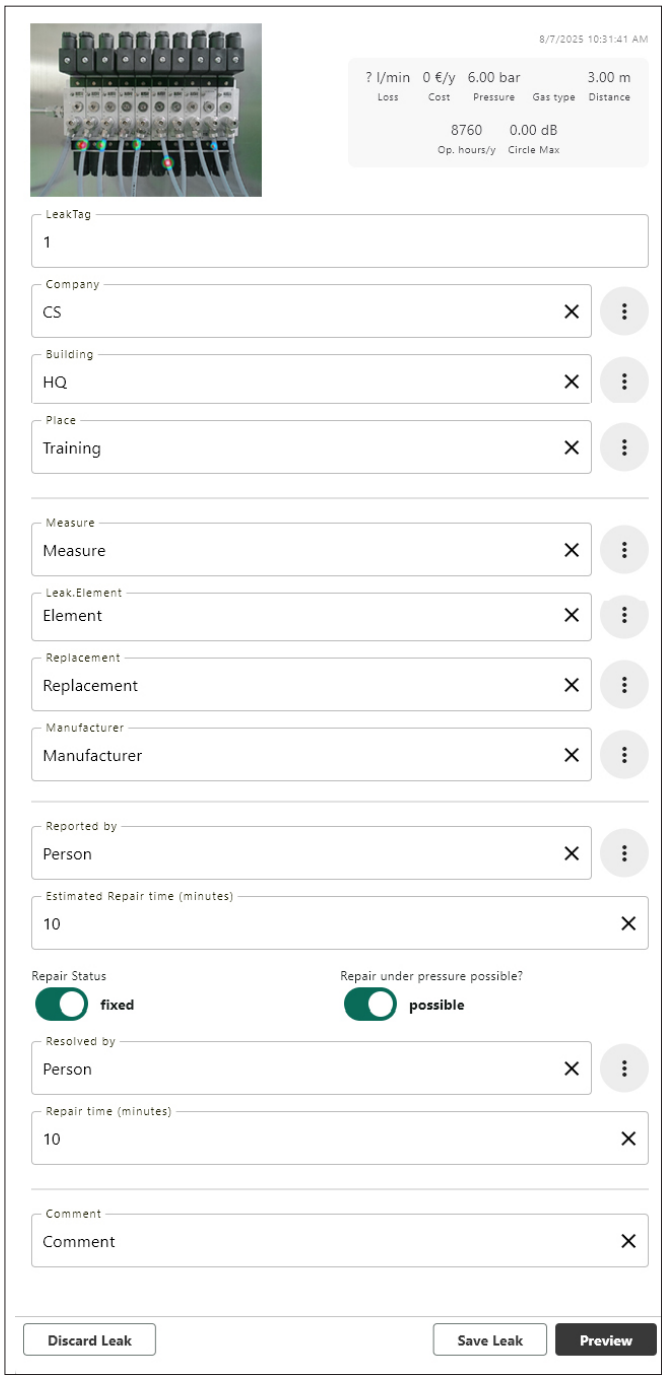

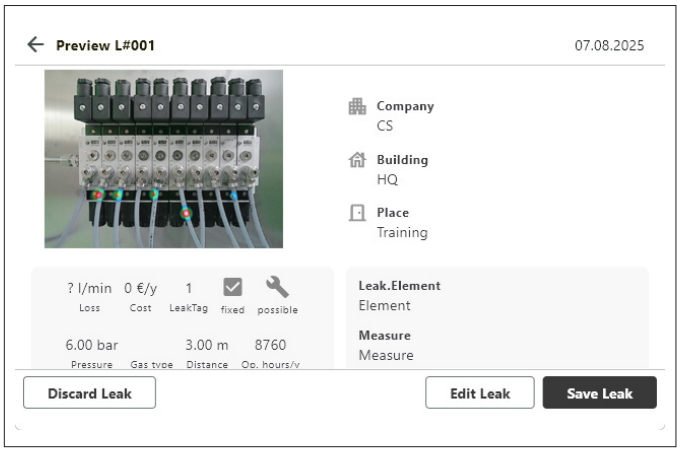

Application Leak Test

In combination with an ultrasonic transmitter, the LC 600 can be used to carry out leak tests. Acceptance of pressure vessels, commissioning of extinguishing systems, leak tests of driver's cabs or blow door tests can be made much easier and faster.

Documentation

Simple documentation in the LeakCam 600 directly on site

Define the location

The location of each leak can be stored: Company / building / location

Remedy the leak

Efficiency and clarity also for elimination of leaks. Definition of the necessary spare parts and maintenance work already on site.

Spare parts list in the device

The software can be used to transfer a custom spare parts list to the device. The device offers an intelligent search function with auto-complete feature.
The list with the required spare parts can be exported from the CS Leak Reporter software.

Reporting Software

Use the reporting software to quickly and efficiently produce an ISO 50001 report

CS Leak Reporter - cloud solution

Ideal for leak detection service providers and for companies/ major corporations with multiple locations.

- Each “user” in the leakage search team can be assigned a role (e.g. leakage search, leakage repair, monitoring, checking for success)
- Access rights to individual or all projects can be assigned individually to each user
- The browser-based software ensures a common database in real time and paperless documentation

CS Leak Reporter - PC solution

Creates detailed ISO 50001 reports. Provides an illustrated overview of the leaks found and their savings potential. Measures for elimination, including status display, can be defined for every leak – license for two computers

Leakage Report	Start: 15/04/2019	End: 25/04/2019	Duration: 10 day(s)

Weight:	**LeakCam 600 main body (without battery):** 1130 g / 39.85 oz **18 V 2 Ah, Einhell Power X-Change battery:** 400 g / 14.10 oz **18 V 4 Ah PLUS, Einhell Power X-Change battery:** 595 g / 20.9 oz
Handling:	One-handed or freehand

UltraCam LD 500/510 – Visualises the leaks directly in the image

Enormous time saving compared to classic leak detectors

30 MEMS microphones create the image of the leaks

Brightness sensor activates LEDs in dark surroundings

UPGRADE
Available as an upgrade for LD 500/510

CLOUD
NEW:
Multi-user capable through cloud solution

6.5 m
NEW:
Unique laser distance measurement for automatic cost determination

Find out your leakage rate (l/min or cfm) and potential savings (€ /year). Currency can be set as required

Photograph leaking parts

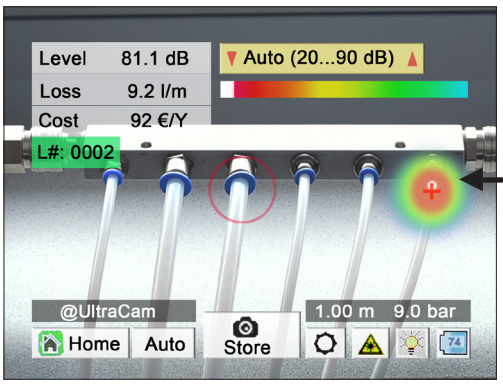

Paperless documentation.
Enter everything into the device on site: Define the leakage location as well as the remedial measures and spare parts required

Create a report in accordance with ISO 50001

KG
Fatigue-free work –
ergonomic, one-hand operation – low weight

The LD 500 meets the requirements of class 1 instruments for the "Standard Test Method for Leaks Using Ultrasonic" (ASTM Int. - E1002-05)

Display and function in detail

The UltraCam LD 500/510 uses 30 MEMS microphones to calculate and visualise the ultrasound image. In addition, the device makes inaudible ultrasound audible

Advantage over the **classic leak detectors**:

Visual representation of the leakage in the live image, even in noisy environments during production

To **determine the leakage rate**, the user aims the laser directly at the leakage. Leakage, laser and red circle must be on top of each other in the image. Then, the **leakage rate in l/min** or **cfm** and the **costs in €/year** are determined exactly. The distance is measured automatically.

DESCRIPTION	ORDER NO.
Set UltraCam with leak detector LD 500:	0601 0205
LD 500 leak detector with UltraCam, integrated camera, 30 ultrasonic microphones for visualisation of the leakage on the screen, incl. 100 leak tags	0560 0205
Transport case	0554 0106
Sound-proof headset	0554 0104
Focus tube with focus tip	0530 0104
AC adapter plug	0554 0009
Spiral cable for connecting the ultrasonic sensor, length 2m (extended)	020001402
Holster with shoulder strap for LD 500/510	020001795

DESCRIPTION	ORDER NO.
Set UltraCam with leak detector LD 510:	0601 0206
LD 510 leak detector with UltraCam, integrated camera, 30 ultrasonic microphones for visualisation of the leakage on the screen, incl. 100 leak tags	0560 0206
Transport case	0554 0106
Sound-proof headset	0554 0104

LD 500/510 – Leak detector with camera - Shows leakage rate in l/min and cost in €

NEW:
Multi-user capable through cloud solution

NEW:
Unique laser distance measurement for automatic cost determination

Find out your leakage rate (l/min or cfm) and potential savings (€ /year). Currency can be set as required

Find the smallest leaks at large distances

NEW:
Automatic sensor detection

Auto level: Automatically adapts the sensitivity to the environment and reliably eliminates ambient noise

Photograph leaking parts

Paperless documentation.
Enter everything into the device on site: Define the leakage location as well as the remedial measures and spare parts required

Transmit the leakage data via USB to your desktop software

Create a report in accordance with ISO 50001

9 hours of continuous operation possible

Fatigue-free work –
ergonomic, one-hand operation – low weight

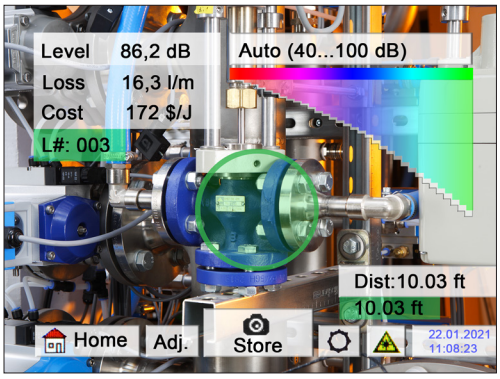

FINDING LEAKS PAYS OFF:

Sample calculation for a medium-sized company:

Approx. 25% of compressed air is lost due to leaks
Installed compressor capacity 150 kW(el) x 6000 OpHrs x € 0.24 /kWh
Annual electricity costs: **€ 216.000**

25% leakage cost: 54.000 € per year!

Display and function in detail

Search for leaks

The ultrasound, which is inaudible to the human ear, is made audible via headphones. Loud ambient noises are faded out.

The device indicates the leakage rate in (l/min or cfm) and the savings potential in (€ /year) on the display. Currency can be set as required.
This data is saved together with the photo.

With the LD 500/510, the smallest leaks, even over long distances (0.1 l/min corresponds to approx. 1 € p.a.) can also be tracked and documented.

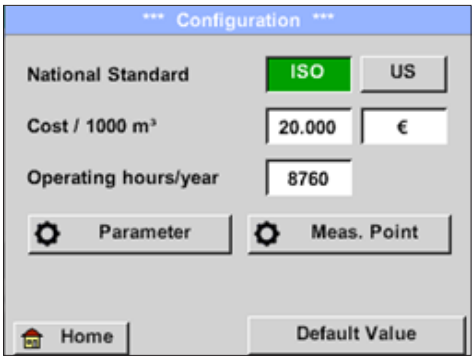

DESCRIPTION	ORDER NO.
LD 500 set consisting of:	0601 0105

Cost calculation basis:	Energy costs (70%)	Specific output:	0.12 kWh/m³
Compressed air costs:	21.6 €/1000 m³	Electricity price:	0.18 €/kWh
Operating hours per year:	4350 h		
Results:		**Improvements:**	
Number of leaks:	141	Number remedied:	1
Total leakage amount:	718.126 ltr/min	Leakage amount saved:	3.468 ltr/min
Total costs per year:	4,048.49 €	Costs saved per year:	19.55 €
Total CO_2 per year:	11.91 tonnes	CO_2 saved per year:	0.06 tonnes

Leak tag: 1

Building – location	COMPRESSOR ROOM 1	**Repair under pressure possible? -** No
Date and time:	15/04/2019 12:06:03	**Error:** Ball valve defective
Leakage rate:	< 1.395 ltr/min	**Spare part:** 1/2" ball valve
Costs per year:	< 7.86 €	**Action:** Replace
Total CO_2 per year:	0.02 tonnes	**Note:** -
Priority:	Low	**Status:** Open
Comment:	Replace ball valve	**Remedied on:** - **Remedied by:** -

Leak tag: 2

Building – location		**Repair under pressure possible? -** No
Date and time:	15/04/2019 12:08:19	**Error:** Flange leaking
Leakage rate:	2.519 ltr/min	**Spare part:** DN 100 flange seal
Costs per year:	14.2 €	**Action:** Reestablish seal
Total CO_2 per year:	0.04 tonnes	**Note:** -
Priority:	High	**Status:** Done
Comment:	Reestablish flange seal	**Remedied on:** 16/04/2019 **Remedied by:** AM

Accessories included in the set:

Headset

The noise-proof headset enables leak detection even in an extremely loud environment. The ambient noise is faded out, and the leakage (inaudible ultrasonic sound) is transformed into an audible signal

Holster with shoulder strap

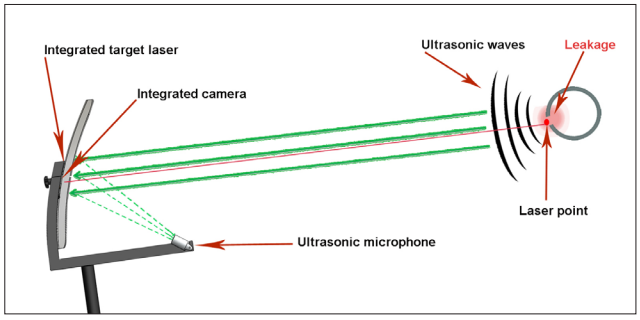

For the LD 500/510, enables ergonomic and safe work

Focus tube with focus tip

For pinpoint detection of the smallest leaks in confined spaces

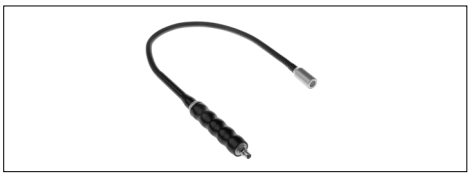

Professional accessory – parabolic mirror

By focusing the ultrasonic waves in the parabolic mirror, even the smallest leaks of 0.8 l/min (approx. € 8 p.a.) can be located with pinpoint precision (± 15 cm) at a distance of up to 10 to 15 m.

The shape of the parabolic mirror ensures that only ultrasonic waves of the targeted leak are evaluated. Background noise is reduced to a minimum.

Accessories

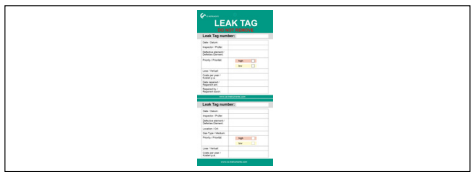

DESCRIPTION	ORDER NO.
Gooseneck for leak detection at sites which are difficult to access (length 600 mm)	0530 0105
Gooseneck for leak detection at sites which are difficult to access (length 1500 mm)	0530 0108
Gooseneck High Sensitivitiy for leak detection on vacuum systems and for leak testing (length: 600 mm)	0530 0110

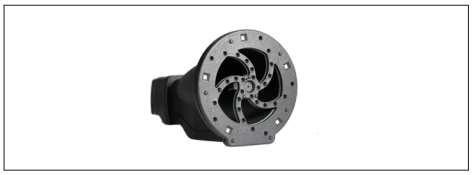

DESCRIPTION	ORDER NO.
Parabolic mirror with laser distance measurement for leak detection in long distances, incl. transport case	0530 0206
Parabolic mirror for leak detection at long distances, incl. transport case	0530 0106

DESCRIPTION	ORDER NO.
Ultrasonic tone generator for leak testing. A handy ultrasonic tone generator is available for detecting leaks in systems that are not under pressure. The transmitter is positioned so that the sound can enter the pipe system. The ultrasonic signal penetrates the smallest openings, which can then be detected with the LD 500	0554 0103

DESCRIPTION	ORDER NO.
500 leak tags for marking the leaks on site	0530 0107

DESCRIPTION	ORDER NO.
UltraCam – funnel with integrated camera, 30 ultrasonic microphones for visualisation of leakages – for retrofitting to existing LD 500 / LD 510	Z554 5500

Software

DESCRIPTION	ORDER NO.
CS Leak Reporter V2 Creates detailed ISO 50001 reports. Provides an illustrated overview of the leaks found and their savings potential. Measures for elimination, including status display, can be defined for every leak – license for two computers New functions: - Simple spare parts management - Histogram functions for documenting continuous improvement in accordance with ISO 50001 on the company or building level	0554 0205

DESCRIPTION	ORDER NO.
CS Leak Reporter V2 – additional licence for one computer	Z554 0205CS

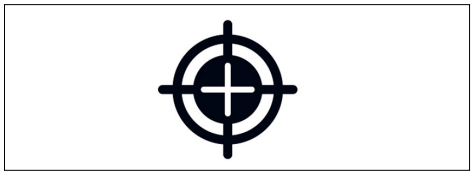

DESCRIPTION	ORDER NO.
CS Leak Reporter – cloud solution Basic package: Browser-based access to the CS Cloud. Advantages: - Common database of all users in real time. - Cross-location work in a team - Paperless documentation. - Unlimited number of guest logins (read-only rights) can be set up. Only available in combination with at least one CS Cloud (0554 0306) user licence.	0554 0305

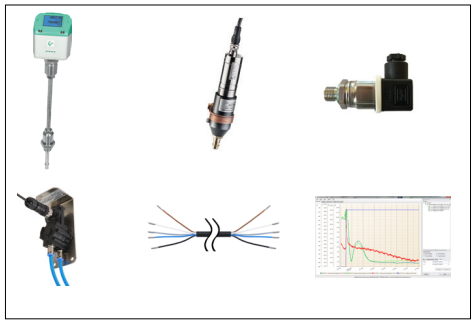

DESCRIPTION	ORDER NO.
User licence – CS Cloud 1 user / 12 months for CS Leak Reporter Cloud solution use.	0554 0306
Term extension - 1 user / 12 months for CS Leak Reporter Cloud solution use.	0554 0307

LD 500/510 calibration

DESCRIPTION	ORDER NO.
LD 500/LD 510 re-calibration / UltraCam LD 500/510	0560 3333

Additional sensors / accessories for connection to LD 510

DESCRIPTION	ORDER NO.
FA 510 dew point sensor for mobile devices, -80...+20 °Ctd incl. mobile measuring chamber, 5 m connection cable and perforated protection cap	0699 1510
VA 500 flow probe, max. version (185 m/s), probe length 220 mm, incl. 5 m connection cable	0695 1124
Standard pressure probe CS 16, 0…16 bar, ± 1% accuracy of f.s.	0694 1886
Differential pressure probe 1.6 bar diff.	0694 3561
Connection cable for pressure, temperature or external sensors on mobile instruments, 5 m	0553 0501
CS Basic – data evaluation in graphic and table form – readout of the measured data via USB or Ethernet. License for two workstations	0554 8040

Calculation

Costs per year						
Pressure	Size of leak – diameter (mm)					
	0.5 mm	1.0 mm	1.5 mm	2.0 mm	2.5 mm	3.0 mm
3 bar	€ 90	€ 361	€ 812	€ 1,444	€ 2,256	€ 3,248
4 bar	€ 113	€ 451	€ 1,015	€ 1,805	€ 2,820	€ 4,061
5 bar	€ 135	€ 541	€ 1,218	€ 2,166	€ 3,384	€ 4,873
6 bar	€ 158	€ 632	€ 1,421	€ 2,527	€ 3,948	€ 5,685
7 bar	€ 180	€ 722	€ 1,624	€ 2,888	€ 4,512	€ 6,497
8 bar	€ 203	€ 812	€ 1,827	€ 3,248	€ 5,076	€ 7,309

Table: Leakage costs in one year with 24-hour operation 365 days per year calculated with compressed air costs of 1.9 ct/Nm³.

TECHNICAL DATA OF THE LD 500 / LD 510	
Operating frequency:	40 kHz ± 2 kHz
Connections:	3.5 mm stereo jack for headset, power supply socket for connecting an external charger
Laser:	Wavelength: 630…660 nm Output power: < 1 mW (laser class 2)
Display:	3.5" touch screen
Interface:	USB interface
Data logger:	16 GB SD memory card (100 million values)
Power supply:	Internal rechargeable Li-Ion batteries, approx. 9 h continuous operation (without UltraCam), 6 h continuous operation (with UltraCam) 4 h charging time
Operating temperature:	-5…+50 °C
EMC:	DIN EN 61326
Auto level:	Automatically adapts the sensitivity to the environment and reliably eliminates ambient noise
Sensitivity:	min: 0.1 l/min at 6 bar, 5 m distance, approx. € 1/year of compressed air costs
Weight without headset:	540 grams (without UltraCam), 698 grams (with UltraCam)

TECHNICAL DATA OF EXTERNAL SENSOR INPUT (LD 510 ONLY)	
Measuring range:	See external CS sensors
Accuracy:	See external CS sensors
Power supply:	Output voltage: 24 VDC ± 10% Output current: 120 mA in continuous operation

Notice

Leak detector LD 450

If gases escape through leaks in pressurized pipe systems (e.g. non-tight screwed connections, corrosions and so on), ultrasonic noises are generated. By means of LD 450, even the smallest leakages which cannot be heard by the human ear and which are not visible due to their size can be detected even from distances of several meters. LD 450 transforms the inaudible signals into a frequency which can be identified by human beings. By means of the comfortable sound-proof headset, these noises can be detected even in extremely noisy environments. The LD 450 leak detector is the advancement of the proven LD 300 and LD 400 and it impresses with its significantly refined sensor technology and its improved support in the tracing of leaks. By means of the integrated laser pointer, which serves for target heading, the leak can be localised more accurately.

The LD 450 meets the requirements of class I instruments for the norm **"Standard Test Method for Leaks with Ultrasound"** (ASTM Int. - E1002-05)

Applications

Leak detection on:

- compressed air, gas and vacuum systems
- Door seals

LD 450 with straightening tube and straightening tip for accurate detection.

Acoustic trumpet

Sound-proof headset:
Enables leak detection in an extremely loud environment

Costs per year						
	Size of leakage - diameter (mm)					
Pressure	**0.5 mm**	**1.0 mm**	**1.5 mm**	**2.0 mm**	**2.5 mm**	**3.0 mm**
3 bar	€90	€361	€812	€1,444	€2,256	€3,248
4 bar	€113	€451	€1,015	€1,805	€2,820	€4,061
5 bar	€135	€541	€1,218	€2,166	€3,384	€4,873
6 bar	€158	€632	€1,421	€2,527	€3,948	€5,685
7 bar	€180	€722	€1,624	€2,888	€4,512	€6,497
8 bar	€203	€812	€1,827	€3,248	€5,076	€7,309

Table: Leakage costs within one year in case of operation 24 h/365 days, calculated with compressed air costs of 1.9 ct/Nm³.

Through the use of a specially designed acoustic trumpet, a better bundling of the sound waves is achieved. This trumpet acts like a directional microphone, which bundles ultrasonic waves and thus improves the acoustic behavior.
Due to the special design of the acoustic trumpet, the use of the laser pointer is not hindered.
Leak test:
A handy ultrasonic transmitter is available for detecting leaks in pressureless systems. The transmitter is positioned so that the sound can enter the pipe system. The ultrasonic signal penetrates the smallest openings, which can then be detected with the LD 450.

Special features

- Robustness and low weight ensure fatigue-free use in industrial environments
- Improved detection of leakages with the acoustic trumpet
- Modern Li-Ion battery with high capacity, external charger
- Minimum operating time 10 h
- Easy operation via membrane keypad
- Adjustable sensitivity

LD 450 is available either as standalone device or in a complete set. The set includes a robust impact-proof transportation case which contains all necessary components and accessories.

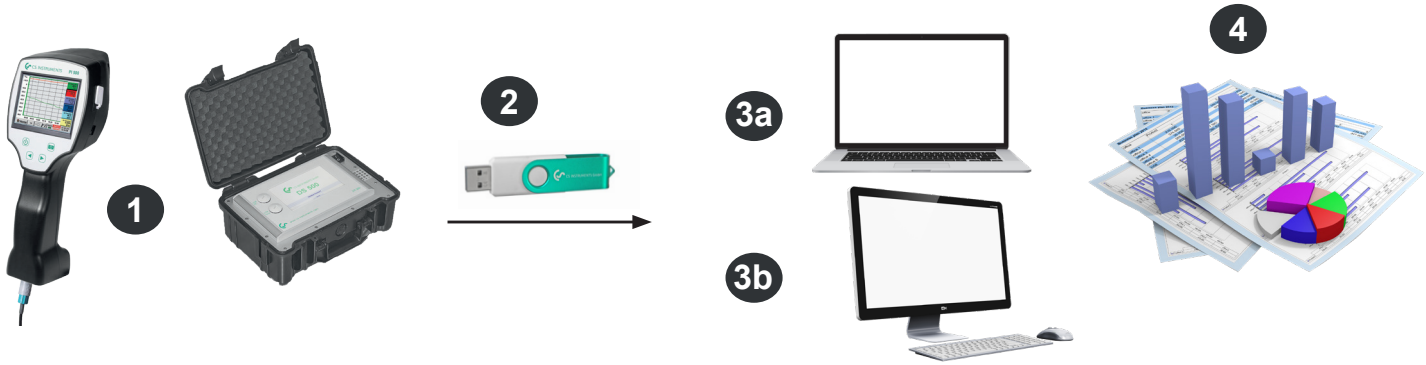

DESCRIPTION	ORDER NO.
Set LD 450 consisting of:	0601 0204
LD 450 leak detector for compressed air systems	0560 0204
Transport case	0554 0106
Sound-proof headset	0554 0104
Focus tube with focus tip	0530 0104
AC adapter plug	0554 0009
Acoustic trumpet	0530 0109
Accessories not included in the set:	
Ultrasonic transmitter	0554 0103

TECHNICAL DATA LD 450	
Operating frequency:	40 kHz ± 2 kHz
Connections:	3.5 mm stereo jack for headset. Power supply socket for connecting an external charger
Laser:	Wavelength: 630…660 nm Output power: < 1 mW (laser class 2)
Operating time:	>10 h
Charging time:	max. 4h
Operating temperature:	-5 °C to 50 °C
Storage temperature:	-20 °C to +60 °C

CS Basic

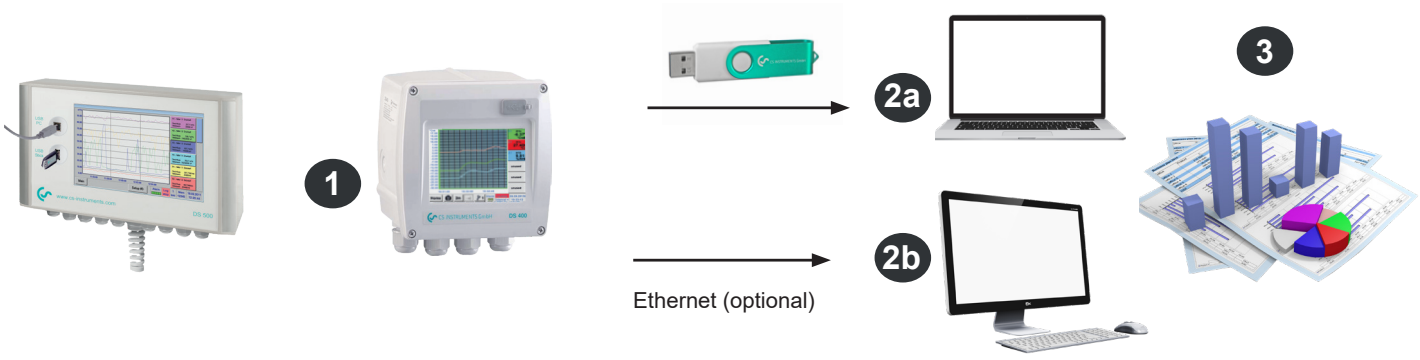

Data evaluation during mobile measurement:

With the CS Basic, the chart recorder DS 500/400 and all mobile devices with data logger can be read out. Depending on the device, data transfer is performed either via USB stick or Ethernet connection.

1. Mobile measurement at the customer. Measured data are saved in the data logger in the selected measuring cycle
2. Export of the data to USB stick
3a. Import of the measured data to the laptop directly on-site
3b. Import of the measured data to the computer in the office
4. Evaluation and print out of the measured data

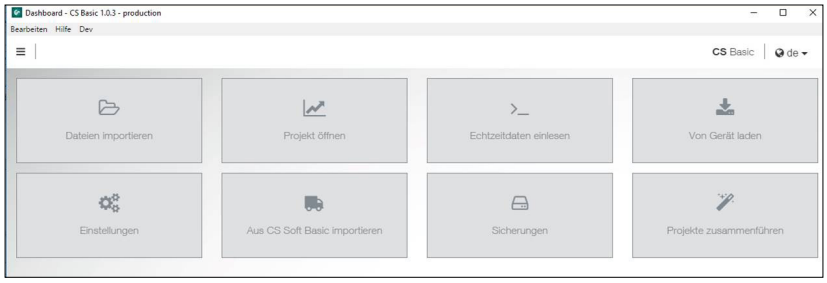

Data evaluation for firmly installed chart recorders in the company:

1. Chart recorder is firmly installed in the company. Measured data are saved in the data logger in the set measuring cycle.
2a. Transfer of the data via USB stick to the computer
2b. Readout of the logger data via the computer network (LAN) by means of CS Basic
3. Evaluation and print out of the measured data

DESCRIPTION	ORDER NO.
CS Basic – data evaluation graphically and in tabular form - reading of the measured data via USB or Ethernet, license for 2 workstations	0554 8040
Additional license for 1 further workplace	Z554 8040
Upgrade CS Soft Basic (0554 7040) to CS Basic (0554 8040). CAA module is no longer available. Please state old licence key when ordering	Z554 8041

CS Basic

Intuitive operation

- All important functions can be retrieved via the dashboard.
- Global settings: Adjust units and change decimal places, store company name and logo
- Import real-time data: Establish Ethernet connection to CS logger or sensor. Trace real-time measured values in graphic and in table form
- Import from CS Soft Basic: Data migration from the previous version of CS Soft Basic
- Data backup: Backup of the projects and the database
- csv. export

Graphic evaluation

All measurement curves are indicated in colour. All necessary functions like free zoom, selection/deselection of single measurement curves, free selection of periods, scaling of the axes, selection of colours and so on are integrated:
This view can be saved as a PDF file and sent as an e-mail. Different data can be combined in a shared file.

Flow evaluation

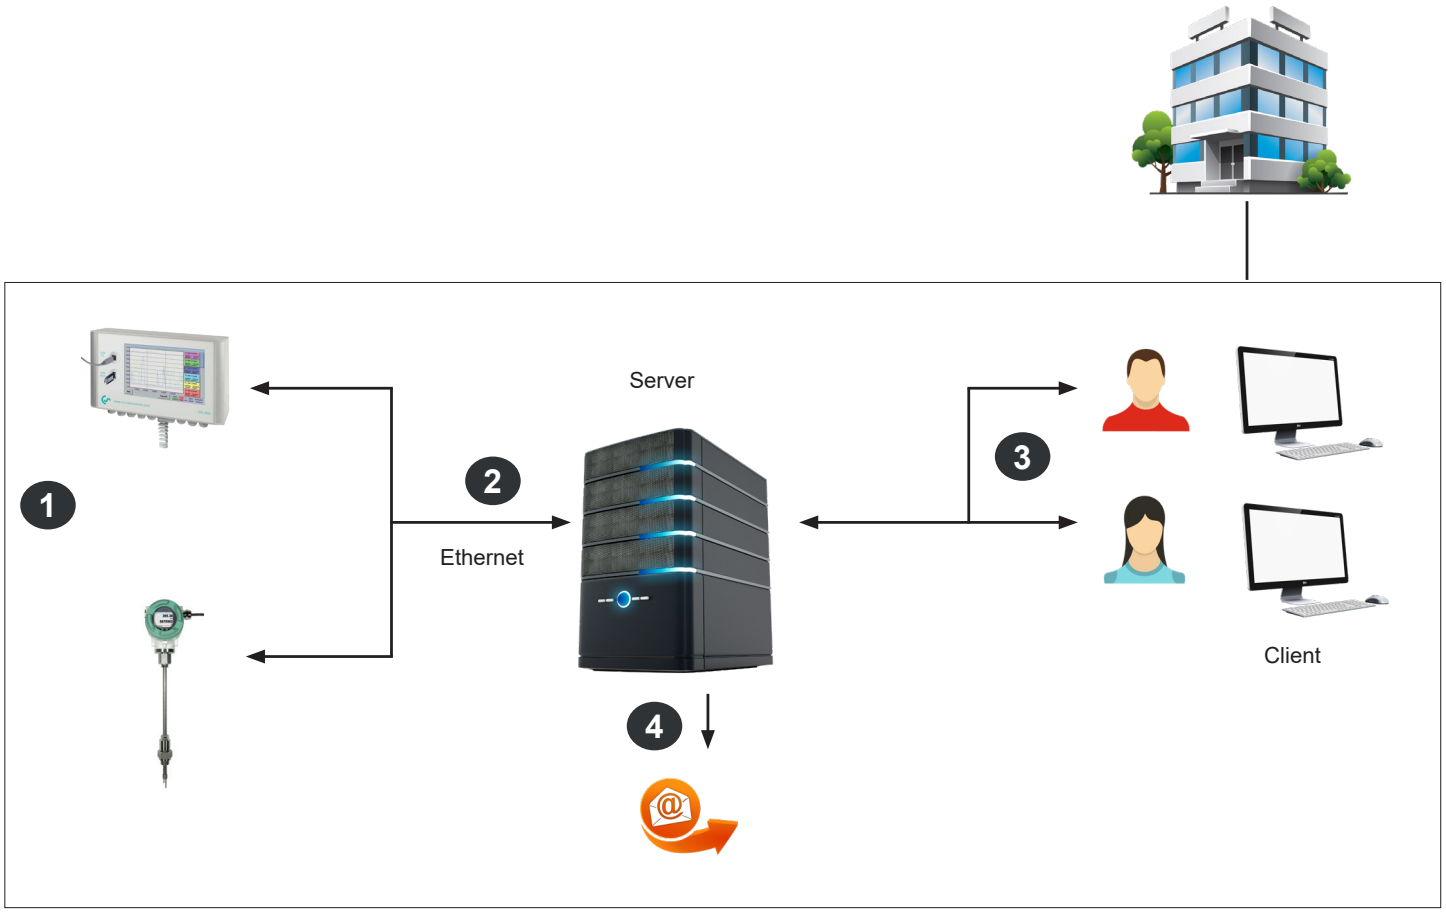

The software carries out flow analysis for all connected flow meters, optionally as a daily, weekly or monthly analysis.

CS Network

Energy monitoring for compressed air and gases in an enterprise

The CS Network is a client-server solution. The server software automatically collects the measured values of all chart recorders and sensors embedded in the company's computer network and stores them in a database. The evaluation/ analysis of the measured data is carried out via the evaluation software (client) at any number of workstations.

- Display real-time data in individual dashboards
- Automatic reporting for consumption: Weekly, monthly, annually
- Automatic alarm by e-mail if limit value is exceeded or not reached
- Alarm history

1 Single sensors with Ethernet connection or chart recorders with several sensors measure the compressed air and gas consumption of all departments/cost centres in an enterprise.

2 The CS Network (Server Installation) automatically collects the measured values of all CS chart recorders and CS sensors which are connected to the computer network in an enterprise and stores them in a database.

3 The evaluation/analysis of the measured data is carried out via the evaluation software (Client) at an unlimited number of workstations.

4 In case of an exceeding of the limit values (freely adjustable), there will be an automatic alarm via e-mail

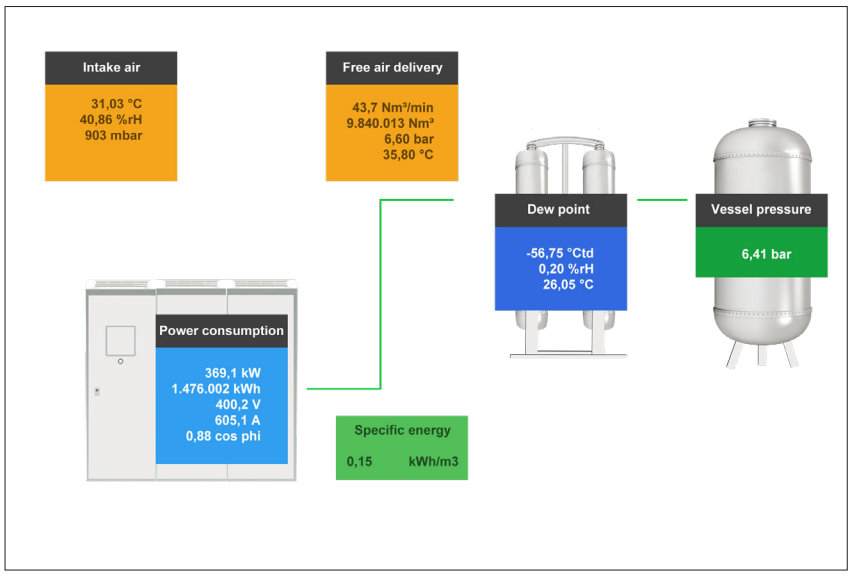

CS Network

Example – Dashboards

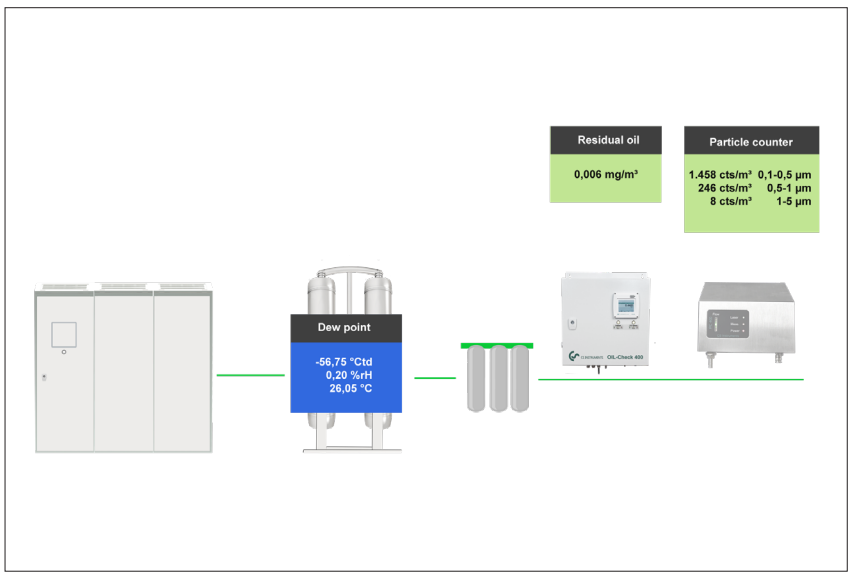

Energy monitoring

Monitoring of consumption and leakage of the entire site, individual departments or systems

Compressor efficiency

Monitoring of the intake controls, power consumption and free air delivery of the compressors

Quality monitoring

Monitoring of compressed air treatment and required ISO 8573-1 quality classes – particles, residual oil and dew point

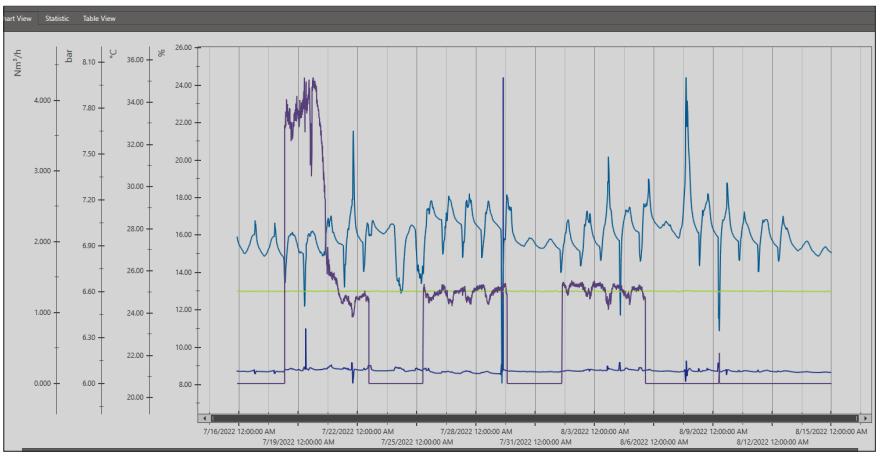

CS Network

Weekly report

Have consumption reports created automatically and sent by e-mail. This way you always have an overview of your consumption and costs and have them under control. You can choose between monthly, weekly or annual reports. The comparison function allows you to compare different time periods so that you can recognise irregularities in your consumption, among other things..

Graphic evaluation

All measurement curves are indicated in colour. All necessary functions like free zoom, selection/deselection of single measurement curves, free selection of periods, scaling of the axes, selection of colours and so on are integrated: Different data can be merged into one common file. This view can be saved as a PDF file and sent as a mail.

Notes

Competitive differential pressure probe for testing on compressed air systems

Typical application of the differential pressure sensor: connection with two PE hoses before and after the filter elements.

Requirements in practice:

- Timely replacement of the filter elements
- At a differential pressure of >350 mbar at the latest, the filter elements should be replaced (active carbon filters are excluded from this)

DESCRIPTION	ORDER NO.
Differential pressure probe 1.6 bar diff.	0694 3561

Max. overload capabili-ty two-sided:	15 bar
Max. one-sided over-load capability: + side - side	 15 bar 10 bar
Bursting pressure:	60 bar
Total error:	2.0% of the full scale
Output:	4 … 20 mA two-wire
Power supply:	10 … 30 V for output 4…20 mA
Ambient operating temperature:	-20 … +80 °C
Connections:	2× G 1/8" female thread incl. plug-in coupling for 6 mm hose
Electrical connection:	Round plug M12 × 1

The longer a filter element is in use, the quicker the differential pressure is rising, and consequently the costs – see diagram below.

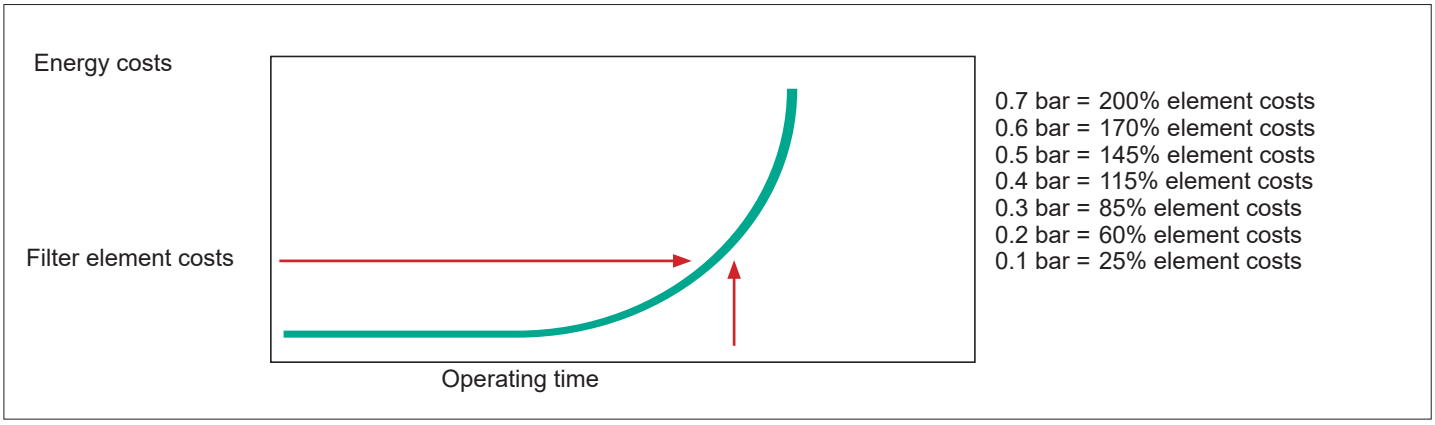

Fig.: Typical differential pressure process, energy costs in relation to filter element costs

3. Connection cable for probes 5 m, with open ends	0553 0108

PTS 500 – Measures pressure and temperature in the process

Special features:

- 2 in 1 sensor: Pressure and temperature
- Wettedparts made of stainless steel for universal use in gases and liquids
- Easy integration into control systems, process control technology and energy management systems via digital interfaces
- Modbus-RTU, Ethernet or M-Bus interface
- Alarm relay – limit value adjustable via buttons (max 60 VDC, 0.5 A)
- Optional: 2 x 4...20 mA analogue output, 2 x alarm relays for pressure and temperature

Example order code PTS 500:
0694 7000_A1_B1_C1

Signal output option	
A1	1 x 4...20 mA analogue output (galvanically not isolated), alarm relay, RS 485 (Modbus-RTU)
A2	2 x 4...20 mA analogue output (galvanically not isolated), 2 x alarm relays, RS 485 (Modbus-RTU)
A3	Ethernet interface (Modbus/TCP), 1 x 4…20 mA analogue output (galvanically not isolated), RS 485 (Modbus-RTU)
A4	Ethernet interface PoE (Power over Ethernet) (Modbus/TCP), 1 x 4...20 mA analogue output (galvanically not isolated), RS 485 (Modbus-RTU)
A5	M-Bus, 1 x 4...20 mA analogue output (galvanically not isolated), alarm relay, RS 485 (Modbus-RTU)

Pressure measuring ranges	
B1	-1... 0 bar (-14.5...0 psi)
B2	0... 1.6 bar (0...23.2 psi)
B3	0... 10 bar (0...145 psi)
B4	0... 16 bar (0...232 psi)
B5	0... 50 bar (0...725 psi)

Process connections	
C1	G1/2“
C2	1/2” NPT

DESCRIPTION	ORDER NO.
PTS 500 sensor for measuring of pressure and temperature	0694 7000
Further accessories:	
Connection cable for probes 5 m with open ends	0553 0104
Connection cable for probes 10 m with open ends	0553 0105
Ethernet connection cable length 5 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2503
Ethernet connection cable length 10 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2504
Calibration certificate for pressure and temperature	3200 0005

TECHNICAL DATA of PTS 500	
Temperature measuring range:	-20...125°C
Accuracy:	± 1.0 °C (-10…+50°C)
Pressure measuring range:	See order code
Accuracy:	± 0.5% off f.s.(at 20°C)
Voltage supply:	18...36 VDC via SELV supply, 5W or Power over Ethernet (IEEE802.3af: Class 2 (3.84W - 6.49W)
Protection class of housing:	IP 65
Screw-in thread:	Stainless steel 1.4404 G 1/2”, NPT 1/2”
Operating temperature:	-20...+125°C for pressure sensor
Ambient temperature:	-20...+60°C
Storage temperature:	-40...+80°C
Readable via Modbus:	Pressure [hPa, mbar, bar, psi,...] Temperature [°C, °F]
Signal output:	See order code

DPS 16 - Digital Pressure probe

Features:

- Digital temperature compensation and non-linearity correction
- RS 485 interface (Modbus-RTU)

DIGITAL PRESSURE PROBE	± 1% ACCURACY	± 0,5% ACCURACY
Digital pressure probe DPS 16, 0…16 bar RS 485, G1/2"	0694 2886	0694 4555
Digital pressure probe DPS 16, 0…16 bar RS 485, NPT 1/2”	0694 3886	0694 5555

TECHNICAL DATE DPS 16	
Measuring range:	0...16 bar
Accuracy:	± 0.5% resp. ±1%
Long-term Stablility:	±0.2% FS/year
Temperature:	-30°C...80°C
Protecting Rating:	IP65
Power supply:	11...28 VDC
Components in contact with media:	316 L
Process connection:	G 1/2“ or 1/2“ NPT

CS 16 - Pressure probe

Features:

- Welded measuring system with no seals
- 4...20 mA analogue output, 2-wire

PRESSURE PROBES WITH 4...20 mA ANALOGUE OUTPUT	± 1% ACCURACY	± 0,5% ACCURACY
Standard pressure probe CS 16, 0...16 bar	0694 1886	0694 3555
Standard pressure probe CS 40, 0…40 bar	0694 0356	0694 3930
Standard pressure probe CS 1.6, 0...1.6 bar abs.		0694 3550
Standard pressure probe CS 10, 0…10 bar	0694 3556	0694 3554
Standard pressure probe CS 100, 0…100 bar		0694 3557
Standard pressure probe CS 250, 0…250 bar		0694 3558
Standard pressure probe CS 400, 0…400 bar		0694 3559
Precision pressure probe CS -1...+15 bar, ± 0.5 % accuracy of. f.s.		0694 3553
Calibration certificate pressure, 5 calibration points for the whole measuring range		3200 0004

TECHNICAL DATE CS 16	
Measuring range:	-1...400 bar
Accuracy:	± 0.5% resp. ±1%
Long-term Stablility:	±0.2% FS/year
Temperature:	-40°C...125°C
Protecting Rating:	IP65
Power supply:	8...30 VDC
Components in contact with media:	316 L, 304
Process connection:	G 1/4“

IAC 500– Measures ambient conditions in the room – Absolute pressure, room temperature, humidity

IAC 500

Special features:

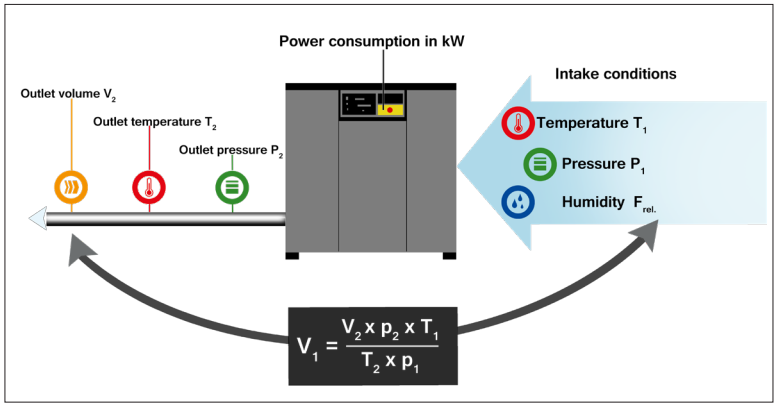

- 3 in 1 sensor: absolute pressure, temperature and humidity in the room
- Modbus-RTU, Ethernet or M-Bus interface
- Alarm relay – limit value adjustable via buttons (max 60 VDC, 0.5 A)
- Optional: 2 x 4...20 mA analogue outputs, 2 x alarm relays, e.g., for dew point and temperature

IAC 510

Special features:

- **3-in-**1 sensor: absolute pressure, temperature and humidity in the room
- Modbus-RTU (RS 485)
- Two freely configurable analogue outputs, 4–20 mA, e.g. for humidity and temperature

The delivery rate of compressors depends on the intake air.

The installation site and the climatic conditions must already be taken into account when designing compressed air stations.

Large temperature fluctuations, e.g. between day and night, lead to uneven compressed air flow.

Example order code IAC 500:

0604 1000 _A1

Signal output option	
A1	1 x 4...20 mA analogue output (galvanically not isolated), alarm relay, RS 485 (Modbus-RTU)
A2	2 x 4...20 mA analogue output (galvanically not isolated), 2 x alarm relays, RS 485 (Modbus-RTU)
A3	Ethernet interface (Modbus/TCP), 1 x 4…20 mA analogue output (galvanically not isolated), RS 485 (Modbus-RTU)
A4	Ethernet interface PoE (Power over Ethernet) (Modbus/TCP), 1 x 4...20 mA analogue output (galvanically not isolated), RS 485 (Modbus-RTU)
A5	M-Bus, 1 x 4...20 mA analogue output (galvanically not isolated), alarm relay, RS 485 (Modbus-RTU)

DESCRIPTION	ORDER NO.
IAC 500 sensor for measuring ambient conditions (absolute pressure, temperature, rel. humidity), incl. wall bracket	0604 1000
Further accessories:	
Connection cable for probes 5 m with open ends	0553 0104
Connection cable for probes 10 m with open ends	0553 0105
Ethernet connection cable length 5 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2503
Ethernet connection cable length 10 m, M12 plug x-coded (8 pin) to RJ 45 plug	0553 2504

TECHNICAL DATA of IAC	
Temperature **Measuring range:** **Accuracy:**	 -20…+60°C, ± 1.0 K (0…60°C) ± 1.25 K (-20…0°C)
Rel. humidity **Measuring range:** **Accuracy:**	 5…95% rF ± 3%
Absolute pressure measuring range: **Accuracy**	300...1100 hPa (abs) ±4 hPa
Voltage supply:	24 VDC, (IAC 500 - 18...36 V, IAC 510 - 10...36 V, via SELV supply) or Power over Ethernet (IEEE802.3af: Class 2 (3.84W - 6.49W)
Protection class of housing:	IAC 500 - IP 65 IAC 510 - IP 66
Operating temperature:	-20...+60°C
Ambient temperature:	-20...+60°C
Storage temperature:	-40...+80°C
Readable via Modbus:	Absolute pressure [hPa, mbar, bar, psi,...], dew point [°Ctd, °Ftd], temperature [°C, °F], rel. humidity [%RH], abs. humidity [g/m³].
Connection:	IAC 500 - M12, 5-polig IAC 510 - M12, 8-polig

Example order code IAC 510:

0604 1510_A1_B1_C1

Process connection	
A1	G 1/2“
A2	NPT 1/2“
Scaling of analogue output 1	
B1	Relative humidity [%RH]
Scaling of analogue output 2	
C1	Temperature T (°C)
C2	Temperature T (°F)

Example order code for cable for IAC 510:

0553 0145_A1

8-pin cable	
A1	5 m
A2	10 m
A3	variable on request

ZUBEHÖR	BESTELL-NR.
CS service software, including a USB cable for connection to a PC and a mains adapter - for configuring and setting the parameters of the IAC 510	0554 2010

FO 510 - Industrial oil moisture sensor

FO 510 for moisture measurement in technical oils

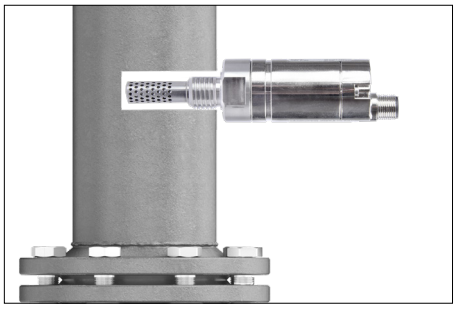

Special advantages:

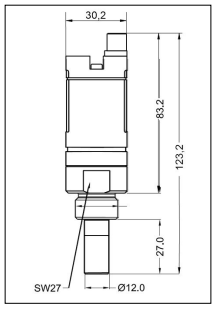

- Fast response time
- Highly accurate measurement of water activity (a_w), as well as process temperature. Measurement is independent of the respective oil type or age
- Calculation of the absolute water content (PPM), possible for transformer oil
- Two configurable analogue outputs, as well as Modbus-RTU (RS 485) interface available

Typical application, measurement of residual moisture in:

- Transformer oil
- Engine oil
- Lubricating oil
- Hydraulic oil
- Diesel fuels

Recommendation:
Installation in a constantly flushed measuring point for best results

Dimensions FO 510

Example order code FO 510:

0699 0100_A1_B1_C1_D1

Process connection	
A1	G 1/2“
A2	NPT 1/2“

Scaling analogue output 1	
B1	Water activity [ ] (standard)
B2	Water content x [ppm]
B3	Temperature T (°C)
B4	Temperature T (°F)

Scaling analogue output 2	
C1	Temperature T (°C) (standard)
C2	Temperature T (°F)
C3	Water activity aw [ ]
C4	Water content x [ppm]

Oil type	
D1	Standard transformer oil
D2	Customer specific oil

Order code Cable for FO 510:

0553 0145_A1

Cable 8-polig	
A1	5 m
A2	10 m
A3	Variable lengths on request

ACCESSORIES	ORDER NO.
CS Service Software FO 510 incl. interface cable to PC (USB) and power supply - for configuration / parametrisation of FO 510	0554 2010

TECHNICAL DATA FO 510	
Measuring range humidity:	0...1 a_w
Accuracy (0…0.9 a_w):	± 0.02 a_w at +23 °C
Accuracy (0.9…1.0 a_w):	typically ±0.03 a_w at +23 °C
Measuring range temperature:	0...125 °C
Accuracy temperature:	±0,2 °C
Oil temperature:	-20...+125 °C
Ambient temperature:	-20...+70°C
Pressure range:	up to 300 bar
Interfaces:	2 x analogue output 04...20 mA (3-wire), Modbus RTU (RS 485)
Supply voltage:	24 VDC (10…36 VDC)
Protection class:	IP 66
EMV:	acc. to DIN EN 61326-1
Material thread:	1.4404
Material perforated cap	1.4301
Connection:	M12, 8-pin

FL 510 - Industrial humidity transmitter

The FL 510 is equipped with a capacitive humidity sensor that provides long-term stable, accurate measurement results. Two analog outputs are available for the output of relative humidity and process temperature.

Special Advantages:

- Stable and accurate measurement results over the long term
- High-precision measurement of relative humidity and process temperature, as well as calculation of various humidity variables such as absolute humidity [g/m3]; moisture content [g/kg], or moisture content [ppmV/V]
- Two freely configurable analog outputs, 4...20 mA
- Modbus-RTU (RS 485)
- Media-independent measurement, in non-corrosive gases

Typical application is the measurement of residual moisture in:

- Measurement of humidity in gas pipes or storage tanks
- Moisture from phase change processes (evaporation)
- Measurement of humidity in inert gas environments (e.g., nitrogen or argon)
- Electronics production in an inert gas atmosphere
- Laboratories with special gas requirements

Example order code FL 510:

0699 0200_A1_B1_C1

Process connection	
A1	G 1/2“
A2	NPT 1/2“

Scaling analog output 1	
B1	Relative humidity [%rF]

Scaling analog output 2	
C1	Temperature T (°C)
C2	Temperature T (°F)

Example order code cable for FL 510:

0553 0145_A1

Cable 8-pin	
A1	5 m
A2	10 m
A3	variable on request

ACCESSORIES	ORDER -NR.
CS service software FL 510 incl. interface cable to the PC (USB) and plug-in power supply - for configuration / parameterization of the FL 510	0554 2010

TECHNICAL DATA FL 510	
Humidity measuring range:	0...100 % rH
Accuracy (0...90 %rH):	±1.8%rF at +23 °C
Accuracy (90...100 %rH):	typical ± 2 % rH at +23 °C
Temperature measuring range:	0...125 °C
Temperature accuracy:	±0,2 °C
Process temperature:	-20...+125 °C
Ambient temperature:	-20...+70 °C
Maximum pressure:	Up to 300 bar
Interfaces:	2 x analogue output 04...20 mA (3-wire-technology), Modbus RTU (RS 485)
Power supply:	24 VDC (10…36 VDC)
Protection class:	IP 66
EMV:	To DIN EN 61326-1
Thread material:	1.4404
Material perforated cap:	1.4301
Connection:	M12, 8-pin

DS 52 - LED process display

In wall housing for 0 (4)...20 mA standard signals

The DS 52 has 2 potential-free alarm contacts (changeover contacts) which can be charged with a maximum of 230 VAC, 3 A. The alarm thresholds are freely adjustable with the keys.

The display is supplied with 230 VAC and has an internal mains unit which provides a voltage of 24 VDC/100 mA for the sensor.

Free screwing clamps are available for forwarding the (0) 4...20 mA signal to superordinate controls.

Application example:
Pressure monitoring with optional alarm unit (buzzer + continuous light)

Application example:
Temperature monitoring with alarm

Special features:

- Integrated in a well-designed wall housing
- Suitable for all common sensors with 0 (4)...20 mA signal
- Easy operation
- 2 relay outputs (230 VAC, 3 A)

DESCRIPTION	ORDER NO.:
DS 52 LED process display in the wall housing	0500 0009
Options:	
Power supply 24 VDC instead of 230 VAC	Z500 0001
Power supply 110 VAC instead of 230 VAC	Z500 0002
Alarm unit mounted to the wall housing	Z500 0003
Alarm unit for external mounting	Z500 0004
Complete sets:	
DS 52 - all-in-one set for pressure monitoring/alerting, consisting of DS 52 LED display and pressure sensor 0...16 bar	on request
DS 52 - all-in-one set for temperature monitoring/alerting, consisting of: DS 52 LED display and screw-in temperature sensor -50...+500 °C	on request

TECHNICAL DATA DS 52	
Dimensions:	118 x 133 x 92 mm (WxHxD)
Display:	LED, 5-digit, height 13 mm, 2 LEDs for alarm
Keypad:	4 keys: Enter, Back, Up, Down
Sensor input:	For sensors with 0 (4)…20 mA signal. Can be connected in 2-/3-/4-wire technology
Accuracy:	Max. +/- 20 µA, typically +/- 10 µA
Burden:	100 Ω
Sensor supply:	24 VDC, max. 100 mA
Power supply: (option):	230 VAC, 50/60 Hz (24 VDC or 110 VAC)
Outputs:	2 x relay output, changeover contact, 250 VAC, max. 3 A
Alarm thresholds:	Freely adjustable via keypad
Hysteresis:	Freely adjustable via keypad
Operating temperature:	-10…+60 °C (Storage temp.: -20…+80 °C)
Control menu:	Can be locked via code for unauthorised access
